India". The caste system of the Hindus and the ideas of common brotherhood among the Moslems were evidences of the peoples' natural aptitude for co-operation and the *nidhis* of Southern India furnished a practical proof of this aptitude. The Government of India in 1901 appointed a committee to consider the question of the establishment of agricultural banks in India and the report of this committee resulted in the passing of the Co-operative Credit Societies' Act of 1904. The co-operative movement was thus launched in India on the 25th March, 1904. The Act aimed at encouraging thrift, self-help and co-operation amongst agriculturists, artisans and persons of limited means and the societies that were to be started were intended to be small simple credit societies for small and simple folks with simple needs and requiring small sums only. Knowledge of and confidence in their fellow members which are the keynote of success were ensured by providing that a society should consist of persons residing in the same town or village or group of villages and should be members of the same tribe, class or caste. In order to provide facilities in urban areas for the small man, urban societies were also permitted. The Act introduced the principle of unlimited liability for rural societies following the Raiffeisen system in Germany, though it permitted urban societies to choose the Schulze-Delitzch model. The local Governments were empowered to appoint special officers called Registrars of Co-operative Societies, whose duty it would be to register societies formed under the Act, to get the accounts of such societies audited by a member of their staff and in general to see that the societies worked well. The seed thus sown has grown to-day in the course of 30 years into a fine tree with twigs and branches, spread out in many directions. In spite of several weaknesses in the co-operative movement in India to-day, it is beyond dispute that the movement has been a powerful instrument towards the awakening of the country-side and has led to a steady improvement in various directions of the life of the Indian cultivator. Moreover, the use of the vote, the elective system, self-help, self-reliance, compromises, gives and takes, work on an organized plan, rounding of angularities are great items in the training up of a citizen and the co-operative societies have been great schools for political and civic education. Since the launching of the movement in 1904, there have been amendments of the co-operative law and committees and commissions of enquiry to remedy defects and to suggest further lines of action. These we shall note later on.

Growth of Co-operation.—In the first few years of the movement the number of societies grew up very slowly but the growth was considerable accelerated from 1910 and the average number of societies from 1910 to 1915 was about 1,100. The pace of growth still further quickened and now there are 105,498 agricultural societies and about 15,539 non-agricultural ones. Table 1 shows the distribution of these societies by provinces. It will appear from the table that progress in different parts of India has not been uniform. Bengal, the Punjab and Madras have the largest **number of Societies**—while the other major provinces like Bombay Bihar, the United Provinces the Central Provinces and Assam show distinctly smaller figures. The Punjab with 24,256 societies stands first in the number of societies (92·6) per one lakh inhabitants, while Bengal which has a larger number of societies than the Punjab stands second in that respect with 57.8. The progress in smaller areas, like Coorg and Ajmer-Merwara, must be regarded as very satisfactory in view of their small population, since the number of societies per one lakh inhabitants works out in their case at 150 and 120·1 respectively. It is satisfactory to note that the co-operative movement has spread not only among the British Indian Provinces but also in Indian States and compared to the total population, Gwalior, Kashmir and Bhopal lead in this matter though the premier States of Mysore, Baroda and Hyderabad have also made considerable progress. Even more instructive are the figures in Table 2. The total **number of members** of primary societies stands on the 30th of June 1939 at 53·7 lakhs. Taking the normal family at a little under 5, it is clear, therefore, that about two and a half crores of the people of India are being served by this movement. There is no single movement in the country fraught with such tremendous possibilities for the uplift of masses as the co-operative movement and there is no single movement with such a large percentage of the population affected by it. Though the Punjab leads in the number of members of societies 35·1 per one thousand inhabitants, Bombay comes next with 30·0, while Madras, Bengal and Sind rank thereafter. This shows that the size of societies varies in different Provinces and that Bombay, while having a smaller number of societies, has a larger average of membership per society as compared with the other provinces of British India. Of the smaller areas, Coorg takes a leading place with 99·9 members per one thousand inhabitants, while Travancore has an average of 31·6. Membership is a much better test in many respects of progress than the number of societies and from this point of view, the progress in the Punjab, Bombay, Coorg, Travancore and Ajmer-Merwara must be regarded as distinctly satisfactory. There is, however, a third aspect also of the growth of the movement. Merely the number of societies, or the membership in the societies is not an index of the work that is being done and of the benefits which are being conferred by the movement on the population affected. The societies are predominantly credit organisations or rather small banking institutions and the part that they play can be better appreciated from their **working capital** than from merely the number of members. In this direction also we must note the marvellous progress so far achieved by the movement. From about Rs. 68 lakhs, which was the average up to 1910, the working capital has advanced very rapidly and stands to-day at more than 106 crores. It is pleasing to note from Table 3 that this large sum has been derived mostly from non-Government sources. The share capital, the reserve fund and the deposits from members together contribute more than Rs. 42 crores and this is really owned capital or the members' own money. The provincial or central banks and other societies contribute a little less—33 crores while the non-members or the outside public contribute about 30 crores. This latter item shows to a remarkable extent the growth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of public confidence in co-operative institutions and speaks well in general of the management of the societies and the very useful purpose they serve in the banking organisation of the country. The distribution of the working capital by Provinces and States gives us a further insight into the progress made in this direction by the co-operative movement in different parts of India. Bombay and Sind lead in this respect with 131 and 114 annas per head of population respectively. The Punjab is a close second with 104. Madras and Bengal fall behind with 74 and 61 respectively. Among the smaller areas, Coorg comes out second with 154 annas per head of population while Ajmer-Merwara leads with 166. Of the Indian States, Indore takes the first place with 08, while Mysore, Baroda and Cochin follow with 59, 56, 49 respectively. Bombay stands an easy first in the matter of deposits from members which amount to over three crores out of a total working capital of 16·2 crores and this is one of the best tests of the success of a co-operative society. It is obvious from a glance at the figures in the tables that there has been very rapid progress in the number of societies, in their membership and in the working capital of these societies. The Punjab, generally speaking, leads in many respects with Bombay coming close behind. The smaller areas and the Indian States have also achieved considerable progress though the movement there started comparatively later. The agricultural societies predominate in all the Provinces and States while non-agricultural, that is, urban societies show a much slower development. While there is much room for satisfaction at the phenomenal growth of the movement in rural and urban areas, it must be admitted, however, that merely the figures of the number, membership and working capital are not enough to base conclusions upon. But before we proceed further, we must now explain the chief component parts of the structure, as it has now been built up, of the co-operative movement in the country.

Financial Structure of the Movement.—Apart from the comparatively few co-operative societies at present working in India for non-credit purposes, it must be recognised that whether in urban or rural areas, a co-operative society largely means a small bank or a credit institution for providing financial accommodation to its members on a co-operative basis. Of these credit institutions, by far the greater proportion rural. The rural credit society has, for its main purpose, the financing of the agriculturist and as such it needs funds. The original idea of co-operative credit lies in making available to the needy the surplus of the well-to-do brethren through the medium of the society but in Indian villages, the well-to-do and the needy rather form distinct groups, the former playing or trying to play the sowcar. Thus instead of comprising more or less all sections of the population of the village, the society is rather made up of the needy section only, at any rate, very largely. Even otherwise, the slender savings of the well-to-do would not be enough to meet the wants of the needy and each village society is not, therefore, able to be self-sufficient, making available the deposits of its well-to-do members as loans for the needy ones. The heavy load of unproductive debt of the average Indian farmer, his habit of investing his savings, if any, in lands and ornaments, and his illiteracy and consequent lack of the banking habit, soon made it apparent that the rural credit societies could not be expected to raise the required funds in deposits either from members or locally. The question of funds for the working of a rural co-operative Society thus becomes a vital question indeed. Central banks have therefore been brought into existence at the district headquarters in order to raise money from towns and make them available to the primary rural societies. Following up the idea further, it has been found necessary to have a provincial bank at the provincial headquarters to serve as a balancing centre for the central banks and to make available larger funds for the primary societies through the central banking institutions. The financial structure of the co-operative movement is thus largely composed of three parts—(*i*) the Agricultural Credit Society, (*ii*) the central financing agencies, and (*iii*) the provincial banks. Obviously one more part in the structure seems possible and desirable, namely, an Apex All-India Co-operative Bank. So far, however, such an All-India Bank has not been started and the provincial banks have been content with an All-India Provincial Co-operative Banks' Association.

Agricultural Credit Societies.—The success of these societies is closely related to their very peculiar constitution. In an ordinary joint stock company, a member is liable only to the extent of the value of his share holding and his liability is therefore limited; but in the case of agricultural credit societies, the liability is unlimited, that is to say, members are jointly and severally liable to the creditors of the society for the full amount of the debts incurred by it. Such a liability would never be acceptable to any person, unless he was imbued with the broader vision of brotherhood between members and unless he himself had an active voice in the management of the society and had a more or less full knowledge of the character and antecedents of his fellow members. Co-operative credit is the capitalisation of character and unlimited liability is the great instrument to secure the admission into a society as members of these persons only, who by their character and antecedents deserve to be taken into that brotherhood which imposes such an obligation as unlimited liability on all, so that they either swim or sink together. To secure success, therefore, the proper selection of members is of the utmost importance; and it has been unfortunate that in India this has not been in practice as well kept in view as it should have been, in the eager desire to promote the formation of more and yet more societies.

Credit is a blessing only if turned to productive account; if used up for unproductive purposes, it is a curse. It would enrich the producer but it would only impoverish the consumer. It is capable of fruitful employment by the intelligent but it leads the illiterate and the ignorant towards perdition. The Indian agriculturist needs money for productive purposes, such as his current agricultural needs, land improvement, purchase of stock and implements, manures and seeds as also for unproductive purposes, such as repayment of old debts,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

weddings and funerals. He thus requires credit not only as a producer but also as a consumer—a producer who hardly makes profits from his industry and a consumer who has no past savings to enable him to tide over a bad period, but who is a perpetual borrower ready to live for to-day and letting the to-morrow take care of itself. He is besides ignorant and illiterate and though sufficiently conversant with the routine of his industry, hardly awake to the need or scope for improvements in his methods. Under such circumstances, it is imperative for the management of the rural co-operative society very carefully to scrutinise the loan applications and examine the purpose for which loans have been asked and to see carefully that the loan when sanctioned is used for the specific purpose. And yet, it is in this respect that there is considerable scope for improvement.

The **funds** of an agricultural credit society are raised from entrance fees, share capital deposits or loans from non-members, loans from the central or provincial banks, loans from Government and the reserve fund. The income from entrance fees and share capital is small compared with the financial requirements of the members. The large sources from which funds are derived are deposits and loans. The volume of deposits which a society is able to secure on terms offered by it is an index of the measure of the public confidence it has inspired and the soundness and the stability of its financial position. The ideal placed before these societies is the development of members' deposits to the extent of making the society financially self-sufficient. These deposits by members further serve the purpose of stimulating thrift and saving habit among them, and are, therefore, eminently desirable. Attempts are everywhere made to encourage them, but the response has been small, except in the province of Bombay, where they form one tenth of the total working capital. Loans from central banks therefore furnish the bulk of the working capital of these agricultural credit societies at present.

Low dividends and voluntary services resulting in low cost of management have made it possible to divert a substantial proportion of the profits of these societies to reserve funds, and thereby provide against unforeseen losses, bad debts and losses on the realisation of certain assets such as by investment depreciation. The general practice in regard to the use of the reserve fund in the business of the societies is that it is used as ordinary working capital.

The funds collected by the agricultural societies in India at present are by no means negligible. They aggregate to about 32 crores of rupees. Their financial position as on the 30th of June 1939 stood thus :—

	In thousands of rupees.
Share capital	4,05,95
Reserve and other Funds ..	8,71,99
Deposits	2,65,94
Loans	16,17,63
Total Working Capital ..	31,61,51

The figures show that these tiny agricultural societies in India work with over Rs. 15 crores of their own capital (including members' deposits in this head) as against their outside borrowed capital of about Rs. 16 crores. The owned capital was thus about 49 per cent. of their total working capital, and this proportion is rising steadily as years pass by.

Central Financing Agencies.—The formation of banks in urban areas on co-operative principles, with the sole object of raising funds for advances to societies having been found necessary to place the financial structure of the movement on a sound basis, the Co-operative Act of 1904 was amended in 1912 and the Co-operative Societies Act II of that year provided for the registration of central banks with the sole object of financing societies. Soon thereafter the number of central financing agencies grew rapidly all over the country, especially in the United Provinces. The function of these central societies was not only to supply the required capital to the primary societies but also to make the surplus resources of some societies available for other societies suffering from a deficiency of funds and to provide proper guidance and inspection over them. On the 30th June 1938 the number of central banks was 599.

There are four main sources from which a central bank derives its working capital which stood in 1936-37 at 29·5 crores : (*a*) Share capital, (*b*) Reserve, (*c*) Deposits, (*d*) Loans.

The paid up share capital and reserves of central banks constitute the owned resources of these banks as distinguished from borrowed resources and provide the guarantee fund against which additional funds are raised by them in the shape of deposits or loans. It is usual to prescribe a suitable proportion between the owned and borrowed resources of central banks in each province. The most usual proportion observed in practice between the borrowed and owned resources in all parts of the country is 1 to 8. Deposits from members and non-members constitute the bulk of the borrowed capital of central banks. The total amount of deposits held by central banks in the year 1938-39 from individuals and other sources amounted to Rs. 16·0 and from primary societies to Rs. 3 crores. Deposits in central banks are mainly of two kinds, *viz.*, savings and fixed. Current deposits are not universal but confined only to selected central banks in selected areas. The principle usually observed by these banks is not to grant loans to societies for periods longer than those for which deposits are available and where loans for long periods are advanced, the periods of deposits are also comparatively long. In addition to funds obtained by deposits, central banks raise loans either from outside banks, from other central banks, from the local provincial bank or from Government. The total amount of loans held by the central banks in 1938-39 from outside banks, from other co-operative banks and from the provincial banks was Rs. 7 crores and from Government Rs. 40 lakhs. Central Banks do not directly borrow loans from Government; the central banks of Indian States, excepting Mysore and Cochin do to a greater or less extent hold loans from Government, while in Gwalior, loans from Government constitute the most important item of the total working capital. Borrowings from outside banks are generally confined to accommodation obtained from the Imperial

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bank of India against Government Securities or Promissory Notes executed by societies in favour of the central bank and endorsed by the latter in favour of the Imperial Bank. This accommodation is, however, limited and advances from other joint stock banks are also now rare. The main source of loans is, therefore, the provincial bank, and where a provincial bank exists, the central banks are generally prohibited from having any direct dealings with either the Imperial Bank or any other joint stock bank or with one another. This rule is however not rigidly observed in the Punjab and Madras. Several central banks in the country, due to their long standing, now possess sufficient resources to be independent of any outside financial assistance but they all continue credit arrangements mainly with the provincial bank on which they rely for emergencies.

In the initial stages, several central banks developed from ordinary urban societies which granted advances to individual shareholders. A few of such central banks have continued the practice and the amount advanced by central banks to individual members during the year 1938-39 was Rs. 1,36 lakhs chiefly in the Punjab, Bombay and Madras. This practice, however, is gradually being abandoned as the chief function of a central bank is to finance societies and to serve as their balancing centre. The total advances made by central banks to societies at the end of the year 1938-39 amounted to over Rs. 9.1 crores.

After meeting management expenses the profits of central banks are distributed as allocations to reserves and dividends to shareholders. The combined net profits of the 594 central banks of the country during the year 1937-38 amounted to Rs. 39 lakhs on the total working capital of Rs. 29 crores; the rate of dividend paid varied from 3 to 6 per cent. in different parts of the country but the most usual rate paid was 5 per cent. per annum.

Provincial Co-operative Banks.—In India, at present, all the major Provinces except the United Provinces have apex banks functioning in them. There are apex institutions in two of the Indian States, Mysore and Hyderabad, though in the others also there are institutions corresponding to the apex bank or functioning as such. There are 10 such institutions in all out of which, 8 are in British India and two in the Indian States. The constitutions of these institutions vary considerably; but the functions of all these institutions are more or less the same, namely, the co-ordination of the work of the central banks and provincialization of finance in them. It is found that in a large majority of the apex banks, the constitution is a mixed one, that is, both in the general body of the banks as well as in the directorate, there are individual shareholders as well as representatives of co-operative societies and central banks.

All apex banks both in British India and in the Indian States depend for their working capital largely on deposits from the affiliated co-operative societies as also from the public. It is, therefore, thought necessary to insist upon the maintenance of fluid resources on a certain scale and in some Provinces the Government of the Province has prescribed definite rules with regard to the maintenance of fluid resources. The period for which deposits are accepted determine the maximum period for which they can lend out these borrowed funds to their clients, and in every Province the apex bank has fixed for itself a maximum term, beyond which no loans are, in general, sanctioned to the borrowing client. The following figures will clearly show the position and transactions of the apex banks in 1938-39:—

Provincial Banks, 1938-39.

	In thousands of rupees.
Working Capital—	
Share Capital	77,36
Reserve and other funds	1,20,30
Deposits and loans—	
from individuals	6,70,78
from Provincial and Central banks	3,15,54
from societies	86,36
from Government	14,58
Total ..	12,85,12
Loans made during the year to—	
Individuals	2,57,37
Banks and societies	4,75,90
Total ..	7,33,27
Loans due by—	
Individuals	30,13
Banks and societies	6,33,92
Total ..	4,64,05

While accepting deposits from co-operative banks and the general public, most of the apex banks have also dealings in current account with the latter. The Punjab bank does not encourage such accounts with individual non-members, as it does not wish to enter into competition with central banks. Apex banks also generally carry on ordinary banking business, such as collecting hundis and dividends from companies and collecting the pay and pensions of public servants. The provincial banks of Bombay, Madras and the Punjab have floated long-term debentures. The Bombay bank has so far issued debentures of the value of Rs. 9·8 lakhs and these debentures are recognised as a trustee security. The bank at Madras has floated debentures of the value of 2.18 lakhs on the security of a floating charge of the general assets of the bank, while the Punjab bank has issued debentures of the value of 5 lakhs. As in every banking institution, these banks also are frequently troubled with surpluses and deficits, though at different times in the different institutions. There is therefore interlending of surplus funds between these apex banks; and during the period of shortage of funds, deposits are accepted from surplusing banks, and some of them call for special season deposits allowing favourable rates of interest to tide over the period of shortage. The All-India Provincial Co-operative Banks' Association enables the member banks to ascertain which of them are surplusing in the period and by correspondence to arrange for inter-provincial borrowings.

Overdues.—Among the most important tests of the success or otherwise of a co-operative credit society is undoubtedly the promptness in repayment of loans by members and it is in this respect that one has to recognise that in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

India, the societies have not attained any very great measure of success. On the 30th June 1939, the overdue loans in agricultural societies amounted to Rs. 11,15,83,233 as compared with Rs. 11,36,48,709 the year before; the working capital of the agricultural societies was Rs. 31,61,51,082; the loans due by individuals were Rs. 24,01,44,148. The overdue loans were therefore 35 per cent. of the working capital and 46 per cent. of the total loans due by individuals. The position is however rendered more serious when one realises that the figures are considerably obscured by book entries and extensions of the date of repayment and in some cases, by the farmers' borrowing from the sowcar to pay the society's dues and that the percentages represent merely an average for all-India. The following table shows the position by different provinces on the 30th June 1939.

Overdue Loans in Agricultural Societies, 1937-38

(in lakhs of rupees.)

Province.	Working Capital.	Loans due by individuals.	Overdue loans by individuals.	Percentage of overdue loans to	
				Working capital.	Loans due.
Madras	5,71	3,22	1,69	30	40
Bombay	3,21	2,54	1,45	45	59
Sind	84	64	47	56	73
Bengal	6,22	3,85	3,44	55	89
Bihar	1,47	1,02	96	65	94
Orissa	60	44	40	67	91
United Provinces	1,33	98	36	27	37
Punjab	7,09	6,19	59	8	10

Others	95	80	11	12	14
Total ..	31,61	24,01	11,17	35	46

The position has since June 1933 grown more serious, since the fall of prices of agricultural produce and the world crisis and trade depression have reduced the repaying capacity of the agricultural borrower considerably and increased the terrible load of overdue loans in rural credit societies. This continued growth of overdue loans is an ominous portent and reflects very badly on the soundness of the co-operative structure. The loans having been based on the basis of the assets of members, the ultimate solvency of the societies is beyond dispute; but severe pressure on members and the consequent wholesale liquidation of societies would react very seriously both politically and economically. The causes that have led to this phenomenon, which menaces the entire existence of the co-operative movement are chiefly to be found in not basing the loans sanctioned on the repaying capacity of the borrowing member in sanctioning loans for unproductive though perhaps necessary social or domestic purposes or for the redemption of old debts and generally in the uneconomic nature of the agricultural industry. The loose scrutiny of the purposes stated in the loan applications and the absence of a careful watch on the way the loan is spent by the members, which must be the case, where almost every member is a borrower or a surety to other borrowers and where the societies are composed almost wholly of the needy section of the village, the well-to-do standing aloof, the remissness in exerting pressure and in taking action against the defaulter, even when he is wilfully defaulting, add considerably to the growth of this menace of excessive overdues. The central financing agencies are more concerned with the assets that in the last resort are the security for their lendings and, with more funds than they could use, are more eager even than the Registrar himself for organising new credit societies.

Land Mortgage Banks.—The loans advanced by co-operative societies to their members and by the central financing agencies to their constituent societies are, from the very nature of the source from which they derive the bulk of their finance, for short or intermediate terms only. By concentrating upon the growth and multiplication of rural credit societies and thus upon facilities for short and intermediate term loans, the co-operative movement did not provide for the redemption of old debts or for increasing the earnings of agriculturists which alone would prevent any further increase in their debts and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pave the way for the paying off of the old ones. It does not seem to have been adequately realised that the removal or the lightening of the heavy load of indebtedness does not depend so much upon the easy terms on which co-operative finance can be made available, as upon the ascertainment of the amount of individual indebtedness to the sowcar, upon so fully financing the agriculturists that they could be prevented from resorting to the *sowcar* any more, and above all on making agriculture an industry sufficiently paying to leave a little saving after all legitimate current expenditure on agriculture and the household has been met, so that this saving could be applied to the liquidation of old debts. The mistaken notion associated with the start of the movement that co-operative credit could serve this purpose and which has clung more or less till now as evidenced by permitting this purpose to be regarded as a legitimate purpose for loans is largely responsible for increasing the load yet further. Short or intermediate term loans can, if judiciously employed, prevent any further increase in the burden, though even that in the present state of uneconomic agriculture seems scarcely possible; but it cannot leave any adequate margin of saving which could be employed to redeem past follies or misfortune. The *sowcar*, it is often forgotten, is the village retailer as also the purchaser of the villagers' produce and what he cannot recover from the borrower by way of interest or the part payment of the principal of the loans, he can more than make good on the threshing floor or in his shop. The co-operative movement by concentration on the credit side has attacked him on one front only, so that the risks of non-payment are saddled on the society while the profits of the merchant and the retail shop-keeper are still enjoyed by the *sowcar*; the attack ought to have been on all fronts. However, under the circumstances, the clarification of the situation of indebtedness is most desirable as a preliminary towards tackling the important questions of the redemption of old debts. The Indian Central Banking Enquiry Committee has wisely emphasised the need for a vigorous policy of debt conciliation on a voluntary basis and for exploring the possibility of undertaking legislation to secure, if need be, the settlement of debts on a compulsory basis. A simple Rural Insolvency Act as recommended by the Royal Commission on Agriculture and endorsed by the Central Banking Committee would also be an important step towards liberating those who have already given up all their assets, from the incubus of ancestral and old debts, so that at least they and their heirs could start with a clean slate. In any case, the need for long term loans to the agriculturists for land improvement and for the redemption of old debts seems obvious, and it has now been recognised that the time has come for the provision of this facility by the starting of land mortgage banks.

There are three main types of such banks. The strictly co-operative type is an association of borrowers who raise credit by the issue of mortgage bonds bearing interest and made payable to bearer and is well illustrated in the German Landschaften. The commercial type is represented by the Credit Foncier of France, which works for profit and declares dividends. The third type—the quasi co-operative has a mixed membership of borrowers and non-borrowers, operating over fairly large areas and formed with share capital and on a limited liability basis. The banks organised so far in India are in a sense of the co-operative type, though strictly speaking they belong to the quasi co-operative variety, admitting as they do to the membership a few non-borrowing individuals for attracting initial capital as well as business talent, organising capacity and efficient management.

At present there are 10 co-operative land mortgage banks in the Punjab. Two of these operate over whole districts, the rest confine their operations to a single tehsil. Bombay has 15 land mortgage societies, which have only recently started their operations. Bengal has 5, Assam has 5, while Madras has 100 primary land mortgage banks and a central land mortgage bank has been started recently. It is too early to pronounce on the success or otherwise of these few banks. Among the objects for which these banks advance loans are the redemption of old debts, improvement of land and method of cultivation and the purchase of land in special cases. The Central Banking Committee think however that for a long time to come the resources of these institutions will be mainly required for enabling the cultivator to redeem his land and his house from mortgage and to pay off his old debts. One feels, however, extremely doubtful whether the emphasis should not be laid on the intensive and extensive development of agriculture, since as pointed out above, unless agriculture becomes a paying industry, the redemption is impracticable and illusory. The bulk of the funds of these banks will have to be raised by debentures and for these purposes, there will have to be in the Provinces central land mortgage banks as in Madras and in Bombay. Government will have also to render assistance to these institutions for the success of the debenture issue, and its guaranteeing the interest as in the Punjab ought to meet all reasonable needs, though in special cases there would not be much harm in the Government purchasing debentures of a certain value. While mutual knowledge of and control over one another among members is the insistent feature in the case of the unlimited liability credit society, the insistence in the case of a land mortgage bank with limited liability is on the capacity and business habits of the directorate, in order to ensure sound valuation of security, careful investigation of titles, correct assessment of borrower's credit and repaying capacity and on the efficient management of affairs.

The operations of the **Land Mortgage Banks and Societies** in India during 1938-39 were as under:—

Number of banks or societies	..	226
Number of members	..	79,596
Share Capital	Rs.	36,15,470
Debentures from the public	,,	1,97,45,950
Debentures from Government	,,	7,02,494
Deposits	,,	12,97,441

Propaganda, Education and Training.—In the initial stages of the movement, it fell on the Registrar to carry on propaganda and organize co-operative societies. For this purpose the assistance of non-official honorary workers was imperative and in the various Provinces a band of such workers was brought into existence, who as honorary organisers of the district or talukas actively co-operated with the officials in carrying on propaganda, organising new societies as a result thereof and looking after the societies so started in some measure. With the rapid growth of co-operative societies, however, it was felt that for the further propagation of the movement it was desirable to carry on work by the non-officials in a more organised manner and for that purpose co-operative institutes were started in the various Provinces. In some Provinces, like Bombay, these institutions are mixed institutions with a membership of individual sympathisers and workers and of co-operative societies. In others, like Madras and the United Provinces, individuals were not admitted as members and the institutions became provincial unions of co-operative societies. In some Provinces, like Bihar and Orissa, they became federations of co-operative societies, while in others, like Bengal and Assam, they are known as co-operative organisation societies. Whatever the exact form assumed by these provincial institutions, their functions were more or less the same in all Provinces, comprising propaganda and the focussing of non-official co-operative opinion on the various problems that confronted the movement from time to time. They have come to be regarded in an ever increasing measure as the third arm of the movement, the Registrar and his staff representing the administrative side performing more or less the functions assigned to them under the statute, the provincial bank with the central banks and banking unions representing the financial side and as such concerned more with the financing of the movement and the institutes, unions, federations or organisation societies representing the propagandist side and as such concerned more with educating popular opinion and representing non-official views to the authorities. A few years back, the All-India Co-operative Institutes' Association was established, with a view to co-ordinate the activities of the provincial institutes, to formulate non-official co-operative opinion on important co-operative problems from time to time and to encourage the growth of co-operative literature.

It was soon perceived that one of the serious handicaps to the successful working of co-operative societies was the ignorance of the members and the absence of trained men as office-bearers of societies. Illiteracy of the rural population, however, has been found too big a problem for these institutes and they have, therefore, attempted only to spread knowledge of co-operation and co-operative principles to the members of societies and to train up the office-bearers in various ways. Education has thus developed into an important function of these institutes. In Bombay, the Institute has created a special education board which maintains co-operative schools at different centres and conducts periodically training classes suitable for different types of workers and employees of co-operative societies. In the Punjab, however, co-operative education has been organised by the Co-operative Department, though the Punjab Co-operative Union renders active assistance therein. In Bihar and Orissa a permanent Co-operative Training Institute had been established at Sabour in the Bhagalpur Division which is controlled by a governing body which includes the Registrar, and a few representatives of the Co-operative Federation. The Training Institute has now been transferred to Pusa. Madras has organised 6 training institutes. In the United Provinces, Bengal and the Central Provinces, arrangements for co-operative training and education have not yet been properly made, though there also it is the Department assisted by the provincial union which organises the training classes. The need for proper co-operative training and education has been felt in an increasing degree in recent years and the Central Banking Enquiry Committee has recommended very strongly the establishment of provincial co-operative colleges and an All-India Co-operative College for the higher training of more important officials in the Department, banks or societies. No action apparently has been taken till now on these recommendations, but there is no doubt whatever that any serious attempt at improvement of the co-operative societies in the country must include a proper organisation of co-operative education not only for the office-bearers of societies or the managers and inspectors of central and provincial banks but also for the inspectors, auditors and assistant registrars of the co-operative departments. The Government of India have for the last few years placed at the disposal of each of the Provincial Governments about one lakh of rupees which were being devoted to a better organisation of Co-operative training and education for the staff of the co-operative departments as also of other institutions.

In some Provinces, like the Punjab and Bihar and Orissa, the provincial union or federation has been actively associated in discharging the Registrar's statutory function of the audit of societies and the Second All-India Co-operative Institutes' Conference held at Hyderabad (Deccan) in 1931 also expressed an opinion that the Registrar's statutory obligation in this matter could be discharged by a system of licensing and that audit should be a function entrusted to the provincial unions or federations. If this idea of a uniform system of audit through the provincial unions be accepted, it will naturally follow that they will also have to assume the responsibility for supervision of the co-operative societies. The departmental audit or inspection by the central banks cannot dispense with the need of careful supervision, which to be effective must be from within and the provincial federation or union is obviously the best agency for this friendly and efficient supervision. The combination of the functions of audit and of supervision as suggested by the All-India Conference and endorsed by the Central Banking Enquiry Committee would mean improved efficiency in the working of the movement while de-officialising it considerably and giving it the popular touch it lacks.

Non-Credit Agricultural Co-operation.—For some years past increasing attention has been directed on other forms of co-operation for the benefit of the rural population. Credit is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but one of the needs of the cultivator; its organisation through co-operation touches but the fringe of the problem; and different provinces have been experimenting upon the application of co-operative organisation to meet his different non-credit needs. The problems of irrigation, consolidation of holdings, improved sanitation, fencing, cattle insurance, dairying and supply of agricultural requisites and above all the marketing of agricultural produce have been therefore engaging the attention of co-operators and societies for these purposes have been established here and there and have been working with varying success. In a land of ignorant and illiterate agriculturists, it would appear wiser to adopt the rule of one village, one society; but the complexities of the non-credit forms of co-operation have induced the authorities to avoid the multiple-purpose or general society and to favour the single purpose society, and we have the curious spectacle of an agriculturist being viewed as one person with a bundle of needs, each one of which it is proposed to meet separately. A single society trying to meet all the needs of the agriculturist would attack the sowcar on all fronts and would become a live force in the village which would tend to promote the ideal embodied in the famous phrase: Better living, better farming and better business. However, co-operative opinion in India has not yet fully accepted the wisdom of this and yet believes in the theory of almost water-tight compartments. The agricultural non-credit societies in India on the 30th June 1939 were 11,564 distributed as under:—

Non-Credit Agricultural Societies, 1938-39.

Province.	Purchase and sale.	Production.	Production and sale.	Other forms of co-operation.	Total.

Of these the important are the marketing societies, particularly for the sale of cotton in Bombay, and the consolidation holdings and better living societies in the Punjab.

Marketing Societies.—Marketing of Agricultural produce is the real crux of the whole question of rural prosperity and betterment and as group marketing is always more effective than individual marketing especially in India where an individual producer is illiterate and constitutes a small unit, co-operative marketing has been accepted now as one of the most desirable ideals to work for. It is only the complexity of the working of co-operative sale societies, the difficulty of providing for marketing finance, the lack of expert knowledge on the part of co-operative officials and the lack of godown and storage facilities that have prevented the rapid multiplication of sale societies and their efficient working. It is really in the development of this form of co-operative effort that ultimate success must be sought for in India, for credit alone could never bring comfort. Where it has been tried with success, the results have been extremely satisfactory to the members. The tremendous headway made in European countries like Denmark and in the United States of America in co-operative marketing organisation and the successful examples of the cotton sale societies in Bombay should arrest attention and invite concentration on the co-operative organisation of agricultural marketing. The jute and paddy sale societies of Bengal have not met with success, it is true; but the cotton grower in Gujarat and the Bombay Karnatak has reaped considerable benefit from the cotton sale societies. Absence of fraud in weighment, adequate and high prices, insurance of the produce against risks of fire, prompt payment of sale proceeds, financial accommodation till the produce is sold, information of daily price fluctuations in the Bombay market, supply of gunnies and genuine and certified seed, bonus and a dividend are no small gains to the agriculturist, who was otherwise at the mercy of the *adatya* or worse still of his village sowcar. The cotton sale societies of Surat have recently combined in a federation which has taken over the co-operative ginning factory already started by the members. A few societies for the sale of other articles have also been organised in Bombay, such as jaggery, tobacco, chillies, paddy, onions and arecanut. Bengal has several jute sale societies with a Jute Wholesale at Calcutta and several paddy sale societies with a sale depot in Calcutta. The Punjab has several commission shops which provide storage facilities so that the grower could wait for better prices, but which sell to local merchants yet, rather than to the merchants at the port. Madras has a number of sale societies, but their transactions are small and they have not yet made much progress.

Consolidation of Holdings.—The law of primogeniture, by which the eldest son alone succeeds to the property of his ancestor and which is in force in some European countries does not obtain in India. Each heir is given a proportionate share of each item of the inherited

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

property and not a share of the whole, equivalent to his portion. The result is that successive generations descending from a common ancestor inherit not only smaller and smaller shares of his land but inherit that land broken up into smaller and smaller plots. This continuous partition of each field amongst heirs leads to fragmentation, which is accentuated by the expansion of cultivation, irregularly over the waste, by purchase and sales, by the extinction of families in default of direct heirs and the division of their property amongst a large number of distant relatives, and by the break up of the joint family system and the custom of cultivation in common.

The disadvantages of fragmentation are obvious. A part of land is wasted owing to fragmentation being so excessive as to prevent any agricultural operations, and another part is lost in boundaries. Fragmentation involves endless waste of time, money and effort; it restrains the cultivator from attempting improvement; it prevents him from adopting scientific methods of cultivation; it discourages him from carrying out intensive cultivation; it enforces uniformity of cropping, and especially restricts the growing of fodder crops in the period during which cattle are usually sent out to graze on the fields. The economic loss due to this system can be easily imagined, and the only solution is consolidation of holdings. This most difficult, important and interesting experiment originated in the Punjab in the year 1920. The procedure adopted in establishing a Co-operative Consolidation of Holdings Society is to call together all persons directly interested in land in a given village, persuade them to accept the by-laws whereby a majority in a general meeting might approve a method of repartition, and then carry out actual adjustment of fields and holdings in such a manner that no single individual might have any grievance. As the result of patient work which has now extended over ten years, some very striking results have been achieved and the movement for consolidation in the Punjab has assumed the dimensions of an important agricultural reform. It is steadily gaining in popularity, and, as more staff is trained and the people become better educated to the advantages of the system, the figures for the area consolidated are mounting up year by year. This work began in 1920-21 and in the 10 years that have elapsed since then, 2,63,462 acres have been consolidated by the end of July 1930, out of the whole cultivable area of about 30 millions, at an average cost of Rs. 2-5 per acre.

In the Central Provinces some success in consolidation has been achieved in the Chattisgarh Division where scattered holdings are particularly common and it is not rare to see 10 acres broken into 40 plots. The Local Government found it desirable to resort to legislation and passed the Central Provinces Consolidation of Holdings Act in 1928. Any two or more permanent holders in a village holding together not less than a certain minimum prescribed area of land, may apply for the consolidation of their holdings, but the outstanding feature of the Act is that it gives power to a proportion, not less than one-half of the permanent right-holders, holding not less than two-thirds of the occupied area in a village, to agree to the preparation of a scheme of consolidation, which scheme, when confirmed, becomes binding on all the permanent right-holders in the village and their successors in interest.

In Bombay a Bill was introduced in the Legislative Council in 1928 to deal with certain features of the problem. When this Bill was introduced a good deal of opposition was created and it had to be ultimately dropped.

There are 11 societies for consolidation of holdings in the United Provinces, and 11 in the Baroda State based on the Punjab model.

Rural Reconstruction.—One of the main reasons why the achievements of the co-operative movement fall so short of the expectations of the promoters and workers lies in the extreme backwardness of the rural population and it is not too much to state that the ultimate success or otherwise of the co-operative movement lies bound up with general, rural development and progress. So long as agriculturists remain steeped in illiteracy and ignorance, are heavily and almost hopelessly indebted, have a fatalistic and listless outlook on life and have an extremely low standard of living, carrying on agriculture with simple tools and implements in more or less a primitive fashion, no great approach to the ideals and the goal of the co-operative and all other rural movements is possible. The co-operative movement itself is indeed a great experiment in rural reconstruction aiming to protect the agriculturist from exploitation of the usurer, the middleman, dalal and the merchant; but concentration on the credit side of the movement with but half-hearted attempts for the co-operative organisation of supply and marketing, a growing multiplicity of institutions for various purposes and above all the neglect of the educational, sanitary, medical and the social sides of village life explain very clearly why the achievements of the movement during the last 35 years have fallen far short of its objective. Rural reconstruction has, however, of late years claimed an increasing amount of attention; but so far attempts on a mass scale have not been made; what has been done has been individual effort—the efforts of individuals fired by the impulse of social service and moved by enthusiasm to utilise their opportunities to the best advantage by contributing to the welfare of the humble village folk. The best known of such centres is at Gurgaon in the Punjab. The work done there covers education, sanitation, medical relief, improvement of agriculture, female education and maternity welfare.

In the Central Provinces and Berar the local Government carried on similar work from November 1929. The later part of 1933 saw a considerable impetus imported to the cause of rural reconstruction in India. 'His Excellency Sir Frederick Sykes,' the then Governor of Bombay, concentrated on village uplift and carried on an intensive propaganda in that behalf which has led to the formulation of a scheme whereby the work is being carried on earnestly by District Committees under the guidance of the District Collectors, the work being co-ordinated by Divisional officers. The Punjab has appointed Brayne of Gurga on fame as Commissioner for Rural Reconstruction and Bengal has made a similar appointment, and it appears that all Provincial Governments are devoting considerable thought to this very important work.

Better Living Societies.—The Punjab has been responsible for introducing this very desirable type of co-operative society to promote better living among its members. There are about 300 such societies in that province and they have been doing quite important work in their own way. The societies do not collect any levy from their members, except the small entrance fee and they lay down a programme of work and make rules for carrying it out from year to year, violation of which is punishable with fine under the by-laws. Though these societies in the first instance have for their object the curtailment of ruinous expenditure on marriages and other social occasions, they have also helped in various other matters; so that apart from saving to their members thousands of rupees each year, they are contributing to the general village uplift in some measure. Some of these societies have levelled and paved and swept the village lands, some have promoted sanitation, some have induced the villagers to improve ventilation in their houses, some have repaired and roofed the village drinking well, some have arranged that all manure should be pitted, some have discouraged expenditure on jewellery, and some have stopped waste on farms. Thus in a variety of ways these societies generally have been great factors in the improvement of conditions in the life of the village. It is earnestly hoped that such better living societies will be started in large numbers in the various provinces of India or better still that the co-operative credit societies would take upon themselves the function performed by these societies and that the term better living be given as wide a connotation as possible so that the co-operative movement would be doing good to itself and the nation by carrying on the general work of village uplift, as well as its own economic objective of strengthening the position of the agriculturist.

Urban Credit Societies.—While the chief objective of the co-operative movement was from the first to do service to the rural population, it must be remembered that the Act of 1904 permitted two classes of societies,—rural and urban, recognising thus the suitability of the co-operative method for solving the problems of urban population also. At present there are in all 15,530 non-agricultural societies with a membership of 17,07,464. Of these, 6,699 are credit societies, the rest being societies for other purposes.

An important class of the urban population is that of the merchants and traders, and though the joint-stock banking system that has so far developed in India is quite well suited in many respects for them, from the point of view of the small trader, it is co-operative banking that is obviously wanted. The importance of **People's Co-operative Bank** promoted for the benefit of urban people without any distinction of caste or creed is, therefore, very great, for the finance of small merchants, artisans and craftsmen for the stimulation of trade and industries in and around district and taluka towns. The principal business of these banks is short-term credit and in this respect they resemble the ordinary commercial banks. In the absence of any industrial co-operative bank, it is also for the peoples' bank to finance small industrialists and help the development of cottage industries, which still play a very considerable part in the industrial economy of India. Another very important function which falls to peoples' banks is the financing of the marketing of the produce of the land from the field to the port or to the principal market centres and thus assist in the development of the internal trade of the country. It is only, however, in the Bombay and Bengal Presidencies that we meet with some good institutions functioning as peoples' banks. In Madras there are 1,113 non-agricultural credit societies but most of these are not real peoples' banks. The Punjab has 1,092 unlimited liability societies and only 218 with limited liability. Even here we hardly find any development of real peoples' banks. In Bengal the limited liability urban credit societies number 570 and though these societies seem to have won public confidence the more important of them are salary earners' credit societies. Some of the divisions especially the Chittagong divisions have several big concerns, however, working on sound lines. The question of starting Peoples' Banks in Bihar and Orissa has not yet been seriously taken in hand. In the Bombay Presidency, institutions with a working capital of Rs. 50,000 and more are classed as urban banks. Since 1922 co-operators in this Presidency have been very keen on having a full-fledged peoples' bank in every taluka town, for it has been realised that with the proper development of urban co-operative banking, there is no doubt that the various units will come into touch with one another and that mutual settlement of terms and co-ordinated and harmonious work will greatly assist the development of inland trading agencies; Peoples' banks are a repository of peoples savings, a nucleus for co-operative activity and an institution giving facilities for internal remittance and it is quite necessary therefore that their share capital must be pretty large. In the Bombay Province on the 30th June 1938 there were 121 urban banks most of which are fairly successful. The total membership was 1,77,200, the working capital was Rs. 4,63,28,028 and the reserve fund amounted to Rs. 59,34,604. It can be said without exaggeration that the development of urban banking has been a distinct contribution of Bombay to the co-operative movement in India and other provinces might well follow Bombay's example in this direction.

An important variant of the urban co-operative society is the **Thrift Society.** The system adopted is to collect regular savings every month for a continuous period of two to four years, invest the collected amount to the best advantage and pay back to the subscriber his amount at the end of the term with interest. In many societies, loans are advanced also but not exceeding a certain fixed proportion, usually ¾ of the deposits. The Punjab has about 1,000 such societies and the bulk of the members are school masters. There are about 125 thrift societies for women only having a membership of about 2,000. Madras has also more than 100 thrift societies and Bombay has half a dozen. Recently however, **Life Insurance Societies** have been started in Bombay, Bengal and Madras. The Bombay society was started in July 1930 and for a few months worked as a provident society only, issuing policies of Rs. 150 to Rs. 500 and that too without medical examination, the idea being to bring life insurance within easy reach of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

small man in the village as in the town. It has no share capital and works on a mutual basis. It has now, however, widened its scope and has been writing policies for larger amounts under its ordinary branch, while under the rural branch, besides the ordinary small policies, it has recently issued a scheme for decreasing term insurance, which will, it is hoped, meet the needs of the primary societies and their borrowing members much better. It has by now written a business of over one crore. The Bengal society is yet a provident society issuing small policies, while the Madras society—the South India Co-operative Insurance Society—has started vigorously as a full fledged life insurance society with share capital and comparatively low rates of premia, and has already written a large business of over one crore.

Review.—The Co-operative Societies Act of 1904 had limitations which were soon recognised and at a conference of the Registrars, a bill was drawn up which became the **Co-operative Societies Act of 1912.** This Act remedied the defects of its predecessor, authorized the registration of societies for purposes other than credit, substituted a scientific classification based on the nature of the liability for the arbitrary one into rural and urban and legalised the registration of Unions and Central Banks.

In 1914 the Government of India reviewed the situation in a comprehensive resolution and recommended a change in the policy regarding the grant of loans to members, so that they might lend money for domestic purposes as well as for agricultural ones in order that the members might confine their dealings with the Co-operative Societies and be weaned from the sowcars. In 1914, the **Maclagan Committee** on Co-operation was appointed and its report in 1915 led to the reorganisation and overhauling of the whole administration of co-operation. Punctual repayment of loans was insisted upon, and all those societies that failed to live up to the ideal of co-operation were sought to be eliminated. From this time onwards the share of non-officials in the movement assumed increasing importance and it came to be realized that for the success of the movement, deofficializing of the same was necessary. The Government of India Act of 1919 made co-operation a provincial transferred subject and the local Governments were left free to adapt the 1912 Act to their own requirements.

The steady growth of the **Central Financing Agencies** relieved the Registrars partly of the need for attending to this very important matter in the development of co-operation; but propaganda still remained the function of the Registrar and his staff, paid or honorary, and it was perceived that non-official institutions should be established to take over this function from official hands. Accordingly **Co-operative Institutes** were started in various Provinces, in some cases as unitary societies reaching down to the village through their branches in the divisions and the district, in other cases as a federation or union more or less complete of the primary societies. The part these non-official bodies began to play henceforth became increasingly important, some adding to the primary function of propaganda, others such as co-operative education, supervision over societies and even audit.

The steady progress of the movement—sometimes even too rapid—for nearly 20 years, however, was found hardly to lessen the colossal burden of the indebtedness of the ryot, for co-operative credit necessarily confined itself to short-term loans. It was in the Punjab that the first *Co-operative Land Mortgage Bank* was started at Jhang in 1920. Soon after other provinces also followed suit.

While the movement was developing at a rapid pace it was found that financially the situation was worsening. Defaults in repayment were becoming increasingly common and **Co-operative Committees of Enquiry** were instituted in various Provinces. The Central Provinces thought it necessary to have such a committee in 1922, while Bihar and Orissa followed with a similar committee in 1923. A few years after the Oakden Committee made similar inquiries for the U. P., the Townsend Committee for Madras and the Calvert Committee for Burma. These Committees have carefully analysed the position in their respective provinces and have made recommendations for the consolidation and rectification of the co-operative credit organisation and the extension of the non-credit side of agricultural co-operation. The powers conferred upon the Local Government by the Act of 1919 to modify the Act of 1912 have been exercised so far in but few Provinces such as Bombay, Burma, Madras, Bihar and Orissa. Bombay passed the **Co-operative Societies' Act of 1925** incorporating the suggestions made from time to time for the amendment of the previous All-India Act. This new Act made the object of the movement still wider than that of its predecessor and its preamble refers to "better living, better business and better methods of production" as the aim of the movement. The chief features of the Bombay Act of 1925 are the adoption of a scientific system of classification of societies, the improvement of the procedure for liquidation of cancelled societies, the extension of summary powers of recovery to the awards of arbitrators and the provision of penalties against specified offences. The Burma Act came into force in 1927 and the Madras Act in July 1932. Bihar and Orissa has also now passed a similar Co-operative Act of its own recently. The progress of the movement in forms other than credit has not been very remarkable and credit societies still predominate, especially the Agricultural Credit Societies.

The **non-credit movement** has had naturally more obstacles to overcome than the credit but the former is slowly gathering force in the shape of sale societies for cotton in Karnatak, Gujarat and Khandesh, cattle insurance societies in Burma and irrigation societies in Bengal and the Southern Division of the Bombay Presidency. Perhaps the most remarkable instance of the non-credit movement in India is to be found in the Punjab where consolidation of holdings has been successfully attempted through co-operation. In the non-agricultural non-credit sphere, a still smaller headway has been made. There are a number of housing societies especially in Bombay, Madras and Mysore, and artisans' societies and unskilled labour societies in Madras. It may be noted that on the agricultural side,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

co-operative farming has hardly been touched and on the non-credit side the consumers' movement has made but meagre progress.

In 1926, the *Royal Commission on Agriculture* was appointed and co-operation formed only a part—though an important one—of its extensive enquiry. Recently, in consequence of the appointment of the provincial committees under the *Indian Central Banking Enquiry Committee* the co-operative movement in the different provinces has been surveyed. But the provincial committees, for obvious reasons, confined their inquiries to banking in relation to agriculture, small industries and trade. Thus only those aspects of the co-operative movement which have an intimate bearing on the credit needs of the population and the development of banking facilities have been examined, while the need for separate enquiries into the whole movement in the different provinces of the lines of those undertaken in C. P., U. P. and Madras and emphasised by the Royal Commission on Agriculture is still to be met. Bihar and Orissa recently got its movement examined by a committee; Travancore followed suit and Mysore too appointed a Committee which has published its report last year. The Government of Bombay convened in June 1933 a Round Table Conference of official and non-official Co-operators to discuss the problems that confronted the Movement in Bombay. As a result of this Conference, three Committees were appointed, one to examine the system of supervision over Co-operative societies by the Supervising Unions in the Presidency, another to report on the best way to help the agriculturists in these times of falling prices and trade depression, and the third to examine the problem of extension of land mortgage banking on a Co-operative basis. These Committees have submitted their reports, their recommendations have led to a tightening up of supervision, an extension of land mortgage banking and efforts to meet the growth of overdue loans.

Recently the Government of Bombay appointed a small committee to inquire into the co-operative movement and to suggest how effective action could be taken to improve, extend and strengthen the movement. The report has been submitted and early Government action may be expected. The one welcome feature of the suggestions is the adoption of the multiple society as the primary unit in villages suggested by us for years and advocated strongly by the Agricultural Credit Department of the Reserve Bank of India. The reconstruction of the primary societies on these lines will be a great step in the right direction but cannot yield the fullest benefit, unless the curse of illiteracy and ignorance is removed or mitigated by a strong drive for adult education in rural areas.

The growing difficulties of the Co-operative Movement throughout India in these times of unprecedented depression led the Government of India to hold an All-India Co-operative Conference at New Delhi on the 29th January 1934. In December 1936 and 1939, other Conferences of Registrars met at Delhi and discussed the situation further.

It may also be mentioned that **the Indian States** were not slow in introducing the co-operative movement within their limits, and the movement in some of the more important of the States, such as Hyderabad (Deccan), Mysore, Baroda, Gwalior and Indore has made considerable progress, more or less on the same lines as those followed in the neighbouring British Indian Provinces.

The landmarks in the history of the co-operative movement in India are: the Co-operative Credit Societies Act of 1904; the Co-operative Societies Act of 1912; the Maclagan Committee Report, 1915; the provincialisation of co-operation, 1919; the establishment of institutes, unions and federations for propaganda; the Committees of Enquiry into the co-operative movement in several provinces; provincial legislation; the Report of the Royal Commission on Agriculture, 1928; Reports of the Indian Central and Provincial Banking Enquiry Committees, 1931; and marketing surveys, debt conciliation schemes and land mortgage banking.

The movement has thus developed rapidly and the **stages of its evolution** may be briefly summarised as—agricultural credit; urban credit; central credit organisations; apex co-operative banks; propaganda by non-officials; non-credit agricultural co-operation; urban co-operative banking; long-term loans and debt redemption schemes; land mortgage banks; co-operative education; rectification and consolidation of the credit movement; organisation of supervision over primary societies and rural reconstruction.

At present the Provincial Governments have been seriously undertaking programmes in the interests of the agriculturists. Money-lenders' bills have been passed to restrict the evils of usury and debt legislation has been or is being passed in Madras, Central Provinces, Bombay and a few other provinces so as to reduce agricultural debt and to bring it within the repaying capacity of the debtor. The strengthening and reorientation of the co-operative movement has also been taken earnestly in hand, which would by the conversion of the credit primaries into multi-purpose societies, by organising co-operative sale of agricultural produce and by promoting secondary occupations for the agriculturists on a co-operative basis, change the whole emphasis of the movement from merely credit to the entire needs of the rural population. Active mass-scale efforts at rural reconstruction and at increasing the earnings of agriculturists represent the keynote of the present day trend of the Co-operative Movement.

The titanic struggle in which the forces of barbarism have drawn the Empire has led to concentration on war effort increasingly in this country on the part both of officials and non-officials, and the drive that was taken earnestly in hand a few years back towards the village and its problems and towards a reorientation and expansion of the Co-operative movement now lacks force. But the same forces are leading to an ever increasing industrialisation of India and an ever decreasing dependence of her increasing population on agriculture. The end of the War will, it is hoped, see India re-undertaking its march with greater vigour on the path that leads to the transformation of the debt-crushed ryots into a smiling peasantry with better farming, better business and better living, under the aegis of the co-operative movement.

It conducts a journal entitled "The Proceedings of the Benares Mathematical Society", in which original papers on Mathematics are published, and maintains a library. There are about 100 members from all parts of India. Admission fee Rs. 10. Annual subscription Rs. 6 (Resident members) and Rs. 5 (non-resident members). *President:* Prof. A. C. Banerji, I.E.S.; *Secretary:* Prof. Chandi Prasad, M.A., B.Sc.; *Editor:* Dr. A. N. Singh, D.Sc.; *Treasurer:* Dr. R. S. Verma, D.Sc. *Address:* 22, Senpura, Benares City.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental antiquities, to provide an up-to-date Oriental library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr. Sir R. G. Bhandarkar, which he had bequeathed already to the Institute, was after his demise handed over by his executors to the Institute, and is now located in the Central Hall of the Institute. Since the 1st of April 1918 the Government of Bombay have transferred to the custody of the Institute the unique collection of nearly 20,000 manuscripts formerly accommodated in the Deccan College, together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 10,000 a year for the publication of the B. S. S. and The Government Oriental Series. The Institute has also started a series called the *Bhandarkar Oriental Series* in which two works have been already published and some others have been undertaken. The Institute has undertaken to edit *Mahabharata* critically (*Editor-in-Chief:* Dr. V. S. Sukthankar), at the initiation of the Raja of Aundh who has promised a total grant of Rs. one lakh for that purpose. Grants are being received from the Government of India (Rs. 4,000 a year), the University of Bombay (Rs. 3,000 a year) and the Government of Bombay (Rs. 6,000 a year), Burma, Hyderabad (Deccan), Baroda and Mysore as well as from several Southern Mahratta States. Recently the Government of H. H. The Maharaja Scindia of Gwalior sanctioned Rs.25,000 for the *Mahabharata* work at the rate of Rs.2,500 per year for 10 years. The Trustees of Sir Dorab Tata Trust have also sanctioned an annual grant of Rs.1,000 for the same purpose for 5 years. The British Academy has also given a grant to the *Mahabharata* as a token of their appreciation of this work. The Institute issues a Journal called *Annals of the Bhandarkar Oriental Research Institute* published four times a year. It also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919 under the patronage of H. E. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Thanks to liberal donations from the Tatas and the Jain community, supplemented by Grants-in-Aid from the Government of Bombay, the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Since August 1927 the Institute has been conducting regular M.A. classes in Sanskrit, Pali, Ardhamadadhi and Ancient Indian Culture. Lectures by eminent scholars are also delivered occasionally. Besides these lectures a regular series of free Extension Lectures at certain intervals has been arranged for the benefit of the public. Membership dues Rs. 10 a year or Rs. 100 compounded for life. Members can, subject to certain conditions, borrow books from the library and get the "Annals" free and other publications (a list covering about 100 titles sent free upon request) at concession rates. *Secretary:* Dr. R. N. Dandekar, M.A., Ph.D.; *Curator:* P. K. Gode, M.A.

THE BHARATA ITIHASA SANSHODHAKA MANDALA, POONA.—Founded in 1910 by the late Mr. V. K. Rajwade and Sardar K. C. Mehendale and registered under Act XXI of 1860 in 1916 with the object of collecting and conserving historical materials, erecting suitable buildings for preserving and exhibiting them, publishing such materials and other works of historical research and generally to encourage and foster critical study of and research in Indian history. Has a building of its own; has recently acquired new premises for additional buildings; possesses the best collection of Persian and Marathi historical papers owned by any private society. Has a rare collection of about a thousand Indian paintings now housed in a special wing recently added, maintains a coin cabinet and an armoury of old weapons. Has a section for copper plates, sculpture and archæology and has a library of rare books. Holds fortnightly and annual meetings where notes and papers based on original documents are presented, discussed and afterwards published. Has published several volumes of original historical letters and other historical and literary books whose total number exceeds 80. Received Rs. 5,000 for publishing materials of the Shivaji period from the late Raja Sahib of Mudlol. Conducts a quarterly journal devoted to research. Work done mostly in Marathi. Celebrated the Silver Jubilee by calling the first All-India Modern History Congress in 1935. Has planned Commemoration volumes in English giving an analytical account of researches in various fields. Depends entirely on public subscriptions. Is supported by many Rajas, Jahagirdars, Sardars and the public. The late Dr. J. E. Abbot of New Jersey, U.S.A., left by will a gift of 30,000 dollars to the Mandala for buildings. Annual membership fees for various classes are Rs. 3, 6, 12, 25, 125 and 300 which can be compounded for life by paying ten times the annual subscription of a particular class in a single year. Effective members over 700; Annual income averages between 3 to 4 thousand rupees. *President:* N. C. Kelkar, B.A., LL.B.; *Vice-Presidents:* D. V. Apte, B.A.; Prof. V. G. Kale, M.A.; Shrimant Babasaheb Ghorpade of Ichalkaranji; *Secretaries:* Prof. D. V. Potdar, B.A., corresponding member, Indian Historical Records Commission, and Sardar G. N. Mujumdar, C.I.E.; *Treasurer:* G. V. Ranade, and eight ordinary members all elected. *Address:* 312-13, Sadashiv Peth, Poona City.

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually held every January. Annual subscription Rs. 10; Life member Rs. 100. *President*: Sir Cowasji Jehangir, Bart.; *Hon. Treasurer*: Rao Bahadur N. G. Agaskar; *Hon. Secretary:* V. V. Oak, Bar-at-Law. *Office*: Secretariat, Ground Floor, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804, to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 60. *Secretary:* J. S. Tilley, Town Hall, Bombay.

BOMBAY MEDICAL UNION.—Founded 1883 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the medical profession in Bombay and the Presidency. Entrance Fee for Resident members Rs. 5, monthly subscription Rs. 2, Absent members Rs. 2 yearly and non-resident members yearly subscription Rs. 5. *President:* Dr. A. P. Bacha; *Vice-Presidents:* Dr. M. B. Thakore and Dr. J. P. Padshah; *Hon. Treasurer*: Dr. R. D. Mody; *Hon. Librarians:* Dr. V. B. Desai and Dr. A. Karmally; *Hon. Secretaries:* Dr. Sorab J. Popat and Dr. K. S. Bharucha, Blavatsky Lodge Building, French Bridge, Chowpatty, Bombay.

BOMBAY NATURAL HISTORY SOCIETY. (Registered under Act XXI of 1860).—Founded 1883 to promote the study of Natural History in all its branches. The Society has a membership of about 1,400 all over the world and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. In 1921 the Society was entrusted with the management of the Natural History Section of the Prince of Wales Museum, and a great part of the Society's collections have been transferred to that Museum. A Journal is published three times during the year which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. The Society's library is open to members and books may be borrowed under special arrangement by members residing in the mofussil. Annual subscription Rs. 25. Entrance fee Rs. 10. *Patron:* H. E. The Viceroy of India; *Vice-Patrons:* H. E. H. The Nizam of Hyderabad, G.C.S.I., G.B.E.; H. H. The Maharaja of Baroda; H. H. The Maharaja of Travancore, G.C.I.E.; H. H. The Maharao of Cutch, G.C.S.I., G.C.I.E.; H. H. The Maharaja of Jodhpur, G.C.I.E., K.C.S.I., K.C.V.O.; H. H. The Maharajadhiraj of Patiala; H. H. The Maharaja of Rewa, K.C.S.I.; H. H. The Maharaja of Bhavnagar; H. H. The Nawab of Junagadh, G.C.I.E., K.C.S.I.; Sir David Ezra, Kt., F.Z.S.; A. S. Vernay; Lt.-Col. K. G. Gharpurey, I.M.S. (Retd.); W. S. Millard, F.Z.S. *President:* H. E. Sir Roger Lumley, G.C.I.E., D.L., Governor of Bombay. *Vice-Presidents:* H. H. The Maharao of Cutch, G.C.S.I., G.C.I.E., Rev. Fr. J. F. Caius, S.J., Rt. Rev. R. D. Acland, M.A.; *Curator:* S. H. BOMBAY SANITARY ASSOCIATION.—Founded to create an educated public opinion with regard to sanitary matters in general; (*b*) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and if possible, by holding classes and examinations; (*c*) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (*d*) to arrange for homely talk

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street was built by the Association at a cost of nearly Rs. 1,00,000. The foundation stone was laid by Lady Willingdon in March, 1914, and it was opened in March, 1915. It is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary transferred to the Municipality in 1924, the Museum and office of the Assistant Health Officer, C and D Wards, and the Vaccination Station. *Hon. Secretary and Treasurer :* Dr. R. K. Mhatre, L. M. & S., D.P.H., D.T.M. & H. (Cantab.), Executive Health Officer, Bombay. *Joint Honorary Secretary :* Dr. C. Coutinho, B.Sc., L. M. & S., D. Hy.

BRITISH AND FOREIGN BIBLE SOCIETY.—The British and Foreign Bible Society has been at work in this country since 1811. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in over 100 different Indian languages and dialects and the circulation throughout India and Burma reached 1,363,397 issues in 1940. The Bibles, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Gifts of English Scriptures are made to students who pass University examinations, the New Testament and Psalms to Matriculates and the Bible to Graduates. (These gifts have been discontinued at present on account of the war).

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma :—

General Secretary for India and Ceylon: The Rev. J.S. M. Hooper, M.A., Mayo Road, Nagpur, C. P.

BRITISH MEDICAL ASSOCIATION (Bombay Branch).—Founded 1886, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession. *Secretary :* Dr. D. R. Bharucha, F.R.C.S. (Eng.), 'Dreamland,' 25, New Queen's Road, Bombay 4.

CHILDREN'S AID SOCIETY was established in 1927 to help forward the operation of the Bombay Children Act by taking over responsibility for the maintenance of the Umarkhadi Children's Remand Home, for the organisation of inquiry, and probation, including voluntary supervision work regarding the cases of boys and girls dealt with by the Juvenile Court, for the management of the David Sassoon Industrial School, Matunga ; The Society maintains the Children's Home, Chembur, which is an Agricultural biased school. The Society is a private charitable organisation with a grand-in-aid from Government. Its work lies amongst destitute children hailing from all parts of India, juvenile offenders less than 16 years of age and children offended against by adult persons, all of whom have been arrested under the Bombay Children Act in either Bombay City or Suburban District. *President:* H. E. Sir Roger Lumley, G.C.I.E. *Vice-President*: K. M. Munshi, M.L.A. *Chairman* : Mrs. Maneklal Premchand. *Jt. Treasurers :* Behram N. Karanjia and Prabhashankar Bhatt. *Hon. Secretary :* Kanji Dwarkadas. *Secretary :* K. G. Rama Rao.

CONSUMPTIVES' HOMES SOCIETY.—This Society was started by the late Byramji Malabari and Dayaram Gidumal on the 1st of June 1909. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives. His Highness also gave a donation of Rs. one lakh. In 1911 by special permission the Sanatorium was named " The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

King Edward VII Sanatorium." It has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Madhavlal, Bart., of Ahmedabad. The Sanatorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 100 patients including the special Punjab Block built from a grant of the Punjab Government and reserved for European patients. Most of the blocks and cottages are built by Parsis. The Sir Ratan Tata Charities donated large sums for the upkeep of the sanatorium from 1922, and in 1930 endowed the X-Ray and Electric Light Departments at a cost of Rs.35,000. The Sanatorium has its own dairy and is called the Bai Pirojbai R. H. Patuck Dairy. The Sir Chinubhai Mahdavlal Dispensary has an out-patient department. The Recreation Hall is called "The Sir Bhupinder Singh Recreation Hall" after the name of the late Maharaja of Patiala. Nearly Rs.3,16,000 have been spent on laying out the sites, buildings, etc., and the current annual expenditure is about Rs.56,000. The Senior and Junior Medical Officers are in charge of the Sanatorium. The office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay. Mr. S. P. Wadia is the Hon. Secretary and Mr. Pirosha P. Mistri is the Hon. Treasurer.

EMPLOYERS' FEDERATION OF INDIA.—The Employers' Federation of India was registered early in 1933 with the following among its main objects:—To promote and protect the interests of employers engaged in the trade, commerce, industries and manufactures of India; to promote or oppose legislation or other measures affecting their interests; to collect and circulate statistics and other information of interest to employers; to nominate legatees and advisers to the international Labour Conferences and to formulate opinions on the subjects coming for discussion before such bodies, and to promote or oppose their recommendations; to secure concerted action on all subjects involving the interests of its members; to consider and support well-considered schemes for the welfare and uplift of Labour and establish harmonious relations between Capital and Labour; and to carry on propaganda for the purpose of educating public opinion with regard to the character, scope, importance and needs of industrial enterprise as represented by the Federation.

Most of the leading employers' organisations in India are members of the Federation.

The office-bearers for the year 1941 are:—*President:* Sir H. P. Mody, K.B.E.; *Deputy Presidents:* J. H. S. Richardson, G. B. Gourlay and R. Menzies.

The office of the Federation is at present located at Patel House, Churchgate Street, Bombay.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of "The European and Anglo-Indian Defence Association" and was re-established in 1912 under the title of the European Defenee Association, the present title being adopted in 1913. The Association has for its major object the organisation of European influence in the political life of India. The Head Office (Central Administration) is in Sassoon House, 4 Lyons Range, Calcutta. *President:* C. P. Lawson, M.L.A. *Vice-Presidents:* M. A. F. Hirtzel, M.L.A. and H. S. Town, M.L.A. *Hon. General Treasurer:* R. Arthur; *General Secretary:* Mrs. M. R. Grenyer.

FEDERATION INTERNATIONAL OF SCIENTIFIC RESEARCH SOCIETIES.—(Asia, Africa, Europe and America). Head Office: Moha Bodhi Hall, College Square, Calcutta. Phone B. B. 4527, Calcutta.

Established in 1925 in Iran under the presidentship of the well known scientist Dr. (h. c.) Paul V. Serebriakov-Elboursky. The Federation International is a recognised international scientific institution and has participated in the International Congress held at Cairo in 1925; Cracow in 1927; Paris in 1931; Geneva in 1933; Warsaw in 1934; Brussells in 1935; Calcutta in 1937 and Amsterdam in 1938. Colloborating and co-operating with the Federation are many national and international scientific institutions and eminent scholars from almost all over the world. The aim of the Federation is to encourage research work in the field of different sciences and arts. In the last 15 years of its existence, it has enriched the world

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by many remarkable researches in Geology, Biology, Poleobiology, Poleophitology, Sociology, Chemistry, Kinotology, History, Literature, etc.

It has corrected the geological map of the world as a result of an exploration of the Iranian Plateau ; presented a new science, *viz.* Kinotology ; predicted 234 chemical elements of which 2 have already been approved.

Under the constitution, the Headquarters of the Federation from 1940 is located in Calcutta for the next 15 years. Many rulers of the world, Indian Princes and well known personalities are its Honorary Patrons. Membership of the Federation is open to graduates of any recognised University and those who have rendered either some important public service or done research work in any field of any science or art.

The Federation has 18 scientific research institutions and University Libre whose aim is not educational but research in any field of science or art. The University Libre's main purpose is the examination of theses submitted by scholars for the degree of Doctorate.

Executive Committee of the Federation : Acad. Dr. (h.c.)Paul V. Serebriakov-Elboursky, *Founder and Life Hon. President*; Dr. Kalidas Nag, *President* of *Bureau* ; Acad. Dr. O. G. Ohanian, Acad. Dr. F. K. Dadachanji and Dr. Savitri Devi, *Vice-Presidents* ; Dr. A. K. Mukerji, *General Secretary.*

Representatives in India.—Dr. K. K. Dadachanji, Late Captain, I.M.S., *Vice-President* of the Bombay Branch ; Prof. K. L. Budhiraja of Patiala, *General Secretary,* Southern Punjab States Branch.

INDIAN ACCOUNTANCY BOARD.—The Indian Accountancy Board is constituted under the Indian Companies Act VII of 1913-38, which was specially amended in 1930 in order to give effect to an All-India scheme of registration of public accountants and auditors and the creation of an Indian Accountancy Board to advise the Governor-General in Council on all matters relating to the regulation and control of the accountancy profession in India.

From 1914 to 1918 Local Governments granted both temporary and permanent auditors' licenses to persons to act as auditors of Public Companies, as the minimum qualification required, in view of the extensive bank failures of 1913. From 1918 to 1932 the Local Governments, and from 1932-34 the Central Government, granted such licenses to persons who had been awarded the Government Diploma in Accountancy on the recommendation of the Accountancy Diploma Board of Bombay. There were several practical difficulties in administering a central subject by a provincial government and in 1931 the Central Government took charge of the accountancy profession—the youngest of the learned professions. Every person desirous of practising as a public accountant in British India, has to be enrolled on the Register of Accountants maintained by the Central Government and is styled " Registered Accountant " under the Auditors' Certificates Rules of 1932. There is, in operation, a strict scheme of professional examinations, registrations of apprentices for the practical training, recognisation of coaching institutions for the theoretical aspect, registration for the practising public accountant and an elaborate code of professional ethics, all conducted and rigorously enforced by the Central Government on the advice of the Indian Accountancy Board.

From 1932 to1939 the members of the Indian Accountancy Board were nominated by the Central Government out of the ranks of the leading public accountants throughout India. In 1939 the Central Government changed the rules and introduced a progressive element of elected members from the practising accountants. The ultimate goal is to form an autonomous body of accountants to take charge of the profession. Under the present rules, the Indian Accountancy Board consists of 20 members. The term of membership is for 3 years. The present term commenced from 1st July 1939.

Chairman: The Hon'ble Sir Alan Lloyd,C.S.I., C.I.E., I.C.S., Secretary to the Government of India in the Department of Commerce. *Secretary :* P. N. Bhandari, B.Com. (London), A.C.A., R.A. *Address :* Government of India, Deptt. of Commerce, New Delhi.

INDIAN ADULT EDUCATION CONFERENCE.—The First Session of the Indian Adult Education Conference was held at Delhi in March, 1938 in order to make a beginning with organising all adult education work being carried on throughout the country. At this Conference it was decided to set up a provisional committee to gather information and make preparations for the next Conference, to be held in 1939. The President of this Committee was the late Hon'ble Justice Sir Shah Mohammad Sulaiman, Judge, Federal Court of India, and the Hon. General Secretary was Prof. H. B. Richardson, Government College, Lahore.

From its Information Bureau at No. 23, Daryagunj, Delhi, the Committee issued periodical bulletins and answered all questions concerning adult education. An Adult Education Handbook, edited by Sir S. Radhakrishnan was published in December, 1939.

The Second Conference was held at Bhagalpur, Bihar, on the 2nd and 3rd December, 1939, under the presidentship of Mr. R.P. Masani, Vice-Chancellor, Bombay University. It was decided that sufficient progress had been made in adult education throughout the country to warrant the setting up of a permanent organisation, in place of the Provisional Organising Committee, to co-ordinate work throughout the country. Therefore the constitution of the Indian Adult Education Association was drawn up with the following Office-bearers of the Council : *President,* R. P. Masani ; *Vice-Presidents,* H. H. The Maharajah of Cooch Behar, Rani Laxmibai Rajwade, Mrs. V. L. Pandit, Dr. Syed Mahmood, Prof. A. N. Basu, C. J. Varkey ; *Hon. General Secretary,* S. M. Bharucha, O.B.E., 134-6, Apollo Street, Fort, Bombay ; *Hon. Associate Secretaries,* Miss Godavari Gokhale, Pt. N. L. Kitroo, R. Suryenarayana Rao, P. M. Gopalakrishnan, Rev. B. C. Mukerji ; *Hon. Treasurer,* Prof. H. B. Richardson, Holkar College, Indore.

INDIAN CHEMICAL SOCIETY.—Was founded in 1924 with Sir P. C. Ray as *President*, located in the University College of Science Buildings, 92, Upper Circular Road, Calcutta. Sir S. S. Bhatnagar, *President ;* Sir U. N. Brahmachari, Prof. N. R. Dhar, H. B. Dunnicliff, Dr. Gilbert J. Fowler, Prof. J. C. Ghosh, Dr. S. Krishna, Prof. P. Neogi, Sir P. C. Ray, Dr. H. K. Sen, Prof. B. K. Singh, *Vice-Presidents ;* Prof. P. Ray and Dr. J. N. Ray, *Hony. Editors ;* Dr. P. K. Bose, *Hony. Secretary ;* Dr. A. C. Sircar, *Hony. Treasurer ;* Dr. C. Barat, Dr. J. K. Chowdhury, Dr. B. B. Dey, Mrs. Sheila Dhar, Dr. S. Joshi, Prof. Sudhamoy Ghosh, Dr. M. Goswami, Dr. B. C. Guha, Prof. P. C. Guha, Dr. A. N. Kapanna, Dr. B. L. Manjunath, Prof. P. C. Mitter, Prof. K. G. Naik, Prof. B. Sanjiva Rao, Dr. S. Siddiqui, Dr. P. B. Ganguli, Dr. M. S. Patel, Dr. K. Venkataraman, Dr. N. A. Yajnik, *Members of the Council ;* G. Banerjee, *Asst. Secretary ;* S. N. Mukherjee and Dr. D. Chakravarti, *Asst. Editors.*

Bombay Branch : Dr. K. Venkataraman, *President ;* Dr. R. D. Desai and Dr. R. C. Shah, *Vice-Presidents ;* S. M. Mehta and P. M. Bharve, *Joint Hon. Secretaries ;* Dr. B. K. Vaidya, *Hony. Treasurer.*

Lahore Branch : Prof. J. N. Ray, *President ;* Dr. A. N. Puri and Prof. S. D. Muzaffar, *Vice-Presidents ;* Bhai Mohan Singh and P. L. Kapur, *Hony. Secretaries ;* Prof. N. A. Yajnik, *Hony. Treasurer.*

Madras Branch : Dr. B. Sanjva Rao, *President ;* Dr. K. L. Moudgill, *Vice-President ;* H. Subba Jois, *Hony. Secretary and Treasurer.*

The Society publishes a monthly Journal dealing with original researches in Chemistry in India and a quarterly Industrial Edition of the main Journal specially devoted to industrial topics. Annual subscription for the Industrial Edition is Rs. 6 for non-Fellows. Subscription to Fellows : Rs. 16, Non-Fellows Rs. 16 and an additional Rs. 2 for the Industrial and News Edition. Fellowship is open to graduates of Chemistry and to those who are interested with the progress of Chemistry. Junior Chemists of below 26 years of age are eligible to Associate membership on payment of Rs. 3, as annual subscription. Particulars and Election form can be had from the Hon. Secretary, Indian Chemical Society, P. O. Box No. 10857, 92, Upper Circular Road, Calcutta.

INDIAN AND EASTERN NEWSPAPER SOCIETY.—Formed in February 1939 to act as a Central Organisation of the Newspaper Press of India, Burma and Ceylon and to promote the common interests of its members. *President :* Arthur Moore, The "Statesman" ; *Deputy President :* Devadas Gandhi, "Hindusthan Times" ; *Vice-President :* H. W. Smith, "The Times of India" ; *Hony. Treasurer :* B. J. Kirchner ; *Secretary :* Asu De ; Committee 1941-42 : F. W. Bustin, "The Civil and Military Gazette" ; T. K. Ghosh, "The Amrita Bazar Patrika" ; S. C. Majumdar, "The Ananda Bazar Patrika" ; P. L. Sondhi, "The Tribune" ; K. Srinivasan, "The Hindu." *Address :* Post Box No. 69, New Delhi.

INDIAN LEAGUE OF NATIONS UNION.—(Central Committee).—The original Committee set up in Delhi in 1924. *Secretary :* Mr. U. N. Sen, C/o Associated Press, New Delhi.

INDIAN MATHEMATICAL SOCIETY.—Founded in 1907 for the advancement of mathematical studies in India. It conducts two quarterly journals, *The Journal of the Indian Mathematical Society* and *The Mathematics Student ;* the former publishes original papers on mathematical subjects and the latter is devoted to the needs of students and teachers of mathematics. The Society maintains a library of current mathematical periodicals in all languages and some new books on the subject. The library is located at the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journals of the Society are published in Madras. There are about 400 members from all parts of India. *President :* Dr. R. Vaidynath Swamy, M.A., D.Sc., Ph.D., Reader, University of Madras, Madras. *Secretaries :* Dr. Ram Behari, M.A., Ph.D., St. Stephen's College, Delhi ; S. Mahadevan, M.A., L. T. Presidency College, Madras. *Librarian :* R. P. Shintre, M.A., Professor of Mathematics, Fergusson College, Poona.

INDIAN OVERSEAS CENTRAL ASSOCIATION.—Founded in 1938. The objects of the Indian Overseas Central Association are, among others :—To promote, protect, safeguard and maintain the rights, privileges and interests of all Indians overseas ; to secure for them by every possible endeavour equality of treatment as to admission, residence, occupation and status ; to strengthen in every way constitutional organisations in different countries and colonies for the protection of Indian interests ; to assist emigrating Indians ; to encourage friendly feelings between Indians and non-Indians ; to organise educational, cultural, commercial and agricultural exhibitions, and to publish, sell and distribute literature that furthers the objects of the Association.

At a meeting of the Working Committee of the Indian Overseas Central Association held at the residence of Shri Lala Narain Datta, on the 1st March 1939 a proposal to build "Pravasi Bhawan" (Overseas House) was considered and it was resolved to authorise the Honorary Secretary of the Association to apply to the Chief Commissioner, Delhi, for a suitable piece of land in Delhi. It is now understood that the Hon'ble the Chief Commissioner of Delhi has forwarded a proposal to the Government of India to allot a piece of land of about 3½ acres at a very prominent place in New Delhi at nominal cost and nominal annual rent. Accordingly an application has been submitted to the Hon'ble the Chief Commissioner, Delhi. It is proposed to start and carry on the following activities in the first instance at the proposed Bhawan and expand their sphere of work in other directions as the future needs and exigencies of the situation may require :—Commercial and Industrial Museum ; International Information Bureau ; Library and Reading Room ; Guest House ; Public Meetings Hall ; Offices of the Association.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Association will shortly begin to publish a monthly magazine entitled "Indian Overseas" for the furtherance of its aims and objects. During the year under review the Association held a public meeting under the presidentship of Mr. M. Asaf Ali, M.L.A. (Central) to accord a welcome to the Indian Delegation from the Ceylon India Congress, which consisted of Dr. Perisundram, Ex-Minister, Ceylon Government, Mr. H. M. Desai, Dewan Bahadur I. X. Pareira, and Mr. A. Aziz. Prominent Visitors from overseas to the office of the Association included Hon. Mr. J. B. Pandya, Member, Kenya Executive Council and Mr. V. R. Boal, Managing Director, "Tanganyika Herald."

Membership is open to all Indians sympathising with the Cause of Indians overseas. Minimum annual subscription is Rs. 3.

President : S. Satyamurti, M.L.A. ; *Vice-Presidents :* M. S. Aney, M.L.A. ; A. C. Datta, M.L.A. ; Sir A. H. Ghuznavi, M.L.A. ; Bhai Parmanand, M.L.A. ; Padampat Singhania, M.L.A. (U.P.) ; Huseinbhoy A. Lalji, M.L.A. ; Hon. V. V. Kalikar ; Dr. B. S. Moonje, Ex- M.L.A. and Kunwar Sir Maharaj Singh, M.L.A. (U.P.) *Hon. Treasurer :* Lala Narain Datta ; *Hon. Secretary :* C. L. Patel. Reading Road, New Delhi.

THE INDIAN ROADS AND TRANSPORT DEVELOPMENT ASSOCIATION LIMITED.—Registered Office—41, Nicol Road, Ballard Estate, Bombay.

Patrons : His Excellency Sir Roger Lumley, G.C.I.E., D.L., Governor of Bombay ; His Excellency Sir Hugh Dow, K.C.S.I., K.C.I.E., I.C.S., Governor of Sind.

Vice-Patrons : Major-General Sir Reginald Ford, K.C.M.G., C.B., D.S.O.

The Association was formed in 1926 and registered in October 1927 having a Council with headquarters in Bombay and Branches at Calcutta, Bombay, Madras, Karachi, Assam, Lahore, Nagpur and New Delhi, each with a Local Committee.

The subscriptions for membership of the Association are :

		Per annum.
Associate Members	..	Rs. 5
Ordinary Members	..	,, 10
Supporting Members	..	,, 300

The aims and objects of the Association are to promote the cause of Road, Motor and Air Transport Development throughout India by making representations to the Government of India, Governments of Provinces, District Boards and other Public Bodies concerned, regarding the construction, improvement and maintenance of roads, bridges and aerodromes and methods of transport, to make representations to all or any of the bodies regarding the adjustment of taxation, customs duties and excise affecting motor vehicles and other modes of transport and the employment of same in such a manner as to facilitate the development of motor and air transport throughout India ; to educate the public by means of propaganda and to create authoritative public opinion with regard to the needs of, and advantages to be derived from, improved road and air communications and the use of these forms of transport.

All persons, associations, firms or companies interested in Road, Motor and Air Transport Development and their problems are eligible for election as members.

The present constitution of the Council of the Association is :—

President : The Hon'ble Mr. R. H. Parker, J.P.

Members of Council : Major-General Sir Reginald Ford, K.C.M.G., C.B., D.S.O. ; H. E. Ormerod, J.P. ; S. Guevrek ; Sir Ness Wadia, K.B.E., C.I.E., J.P. ; R. J. Watson ; Nurmahomed M. Chinoy, J.P. ; T. R. S. Kynnersley ; W. B. Whiteside ; H. M. Halsted ; D. Nilsson ; V. F. Noel Paton, J.P. ; J. W. Malone, J.P. ; W. Hutchinson ; J. T. Perry ; G. H. Richmond.

Branches are already in existence in Bombay, Calcutta, Madras, Karachi, Assam, Lahore, Nagpur and New Delhi and others will be formed as and when occasion demands. The former Branch in Burma has now been reconstituted under the name of the Burma Transport Development Association and is working in close co-operation with the Association.

The applications for membership should be made to the General Secretary of the Association at 41, Nicol Road, Ballard Estate, Bombay, or to the Secretaries of the Branches, Bombay, P.O. Box 853 ; Calcutta, P.O. Box 2285 ; Madras, P.O. Box 1270 ; Karachi, P.O. Box 168 ; Assam P.O. Mohanaghat ; Lahore, P.O. Box 161 ; Nagpur, Velloz Bldg., Kingsway ; and New Delhi, P.O. Box 56.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta).—*Patron :* Marquess of Zetland, G.C.I.E. *Secretary :* Dr. Niharranjan Ray. *Office :* 11, Wellington Square, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union, founded in Allahabad in 1876, is an interdenominational organisation having for its object the strengthening of religious and moral education in the Christian schools throughout the Indian Empire. It has six full time workers, both Indian and European. Its General Council is composed of representatives from the National Christian Council, the Provincial Representative Councils local Sunday School Unions which are Auxiliaries of the I.S.S.U., and from Church Councils.

The headquarters of the Union are at Coonoor on the Nilgiri Hills, where, besides the office and well-stocked book shop, there is the St. Andrew Teacher Training Institution. In this institution Summer Schools are held where a short but intensive course of study and training is offered to leaders in religious education from all parts of India.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Besides the activities at headquarters, the Union offers courses of lectures in any part of the country, delivered by members of its staff. A Quarterly Journal is published in English, and Lesson Notes for teachers in English and several vernaculars. Text-books on subjects connected with the work of Bible teaching are also published in various languages, and Scripture examinations are organised.

The officers of the Union are as follows :—

President : The Hon. Sir David Devadass, Madras.

Vice-President : Prof. B. B. Malvea, Ph. D., Allahabad.

Treasurer : W. H. Warren, Madras.

General Secretary : Rev. L. Watts, Coonoor.

The most recent statistics show that there are in India 19,660 Sunday Schools with 37,583 teachers, and 805,586 scholars.

INSTITUTION OF ENGINEERS (INDIA) :—Founded in 1920 ; granted a Royal Charter in 1935. Objects :—(briefly) to promote the general advancement of engineering and engineering science and their application in India and to facilitate the exchange of information and ideas on those subjects amongst its members. The membership consists of Honorary Members ; Honorary Life Members ; Members and Associate Members (Corporate Members) ; Companions ; Students ; and Associates. The Institution is an All-India body and comprises engineers of all branches, civil, mechanical, electrical, mining, structural, etc. Membership of the Institution demands the same high standard of professional status and qualifications as is required by the Civil, Mechanical and Electrical Institutions in England.

The Institution is administered by a Council consisting of 30 to 50 Corporate Members representing all branches of engineering. It has seven Local Centres with its own Administrative Committees, and the total membership is over 1,500. It publishes a quarterly technical Journal.

The Council of this Institution act as local technical advisers to the British Standard Institution on their draft specifications. *President :* N. V. Modak, B.E., M.I.C.E., M.I.E. (India), F.R.S.I. ; *Technical Secretary :* A. R. Nisser, E.E. Hons. (U.S.A.), D.I.C. (London) ; *Secretary :* Rai C. C. Seal Bahadur ; *Headquarters.*—8, Gokhale Road, Calcutta.

LIVESTOCK IMPROVEMENT ASSOCIATION.—(187, Chittaranjan Avenue, Calcutta). The Association is keenly devoted to collecting original statistics and information relating to the cattle problem of India. Received kind appreciations and sympathy from Ministers of all the Provinces of India. Has found the root of the trouble to lie in the prevailing general condition of starvation of cattle throughout the country and the growing scarcity of good cattle. Advocates a practical scheme of wholesale regeneration of cattle by way of getting laws passed towards wide increment of pasture and preservation of good cattle.

President: Baijnath Bajoria, M.L.A. *Hony. Secretary :* Jhabarmull Modi.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY, College Road, Nungumbakam, Madras.

The Society's Library contains nearly a lakh of books which are circulated to members.

Patrons : His Excellency the Governor of Madras and the Lord Bishop of Madras ; *President :* The Hon'ble Mr. Justice S. Wadsworth, I.C.S. ; *Hony. Secretary :* J. Spencer ; *Librarian :* C. N. Ramakrishna Iyer, B.A.

NATIONAL HORSE BREEDING AND SHOW SOCIETY OF INDIA.—Formed in 1923, by Major-General Sir Bernard James, Kt., C.B., C.I.E., M.V.O., who was President from 1923 to 1925. Objects : To form a national body of public opinion on horse-breeding matters ; to encourage and promote horse-breeding in India ; to protect and promote the interests of horse-breeders and to give them every encouragement ; to improve and standardise the various types of horses bred in India ; to prepare an Indian stud book ; and to promote uniformity in all matters connected with horse shows in India. *Patron-in-Chief :* H. E. The Viceroy ; *President* (for 1940) : Col. J. Bruce, O.B.E., Renala Estate, Punjab. *Secretary :* Lieut.-Col. W. H. Blood, M.V.O. The Society issues the following publication : "The Horse in India," an illustrated quarterly Journal in English. The Society holds the Imperial Delhi Horse Show annually in February, but which has been suspended for the duration of the War. *Registered Office*—New Delhi.

PASSENGERS AND TRAFFIC RELIEF ASSOCIATION. (Established in 1915). *Head Office*—Albert Building, Hornby Road, Fort, Bombay. President : Behram N. Karanjia, M.L.C., J.P. *Vice-Presidents :* Gordhandas G. Morarji, J.P. and J. M. Kamdar, Solicitor. *Hon. Joint Secretaries :* Khan Bahadur P. E. Ghamat, Mohanlal A. Parikh, and S. N. C. Patuck. *Asst. Secretary :* S. S. Iyer.

P. E. N. ALL-INDIA CENTRE.—The All-India Centre of this International Society of eminent poets, playwrights, editors, essayists, novelists (P.E.N.) was founded in 1933 by Sophia Wadia under the presidency of Dr. Rabindranath Tagore, long an honorary member of the Lon-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

don Centre. The Vice-Presidents are Ramananda Chatterjee, Srimati Sarojini Naidu and Sir S. Radhakrishnan. The aim of the P.E.N. everywhere is to promote friendliness among writers and to uphold freedom of speech. In addition, the All-India Centre is working for national cultural unity by spreading appreciation of the many Indian literatures outside their own language area and also abroad. This is done by means of public lectures and through its monthly journal *The Indian P.E.N.*, available to the general public in India for Rs. 3 per annum. The All-India Centre has over 200 members among the country's leading writers and editors. Membership is open to any Indian of recognised position as a writer, subject to the approval of the Managing Committee. Entrance fee Rs. 5 ; and the annual fee Rs. 3, which includes subscription to *The Indian P.E.N.* The fee for life membership is Rs. 100. *Honorary Secretary :* N. K. Bhagwat M.A., "Aryasangha," 22, Narayan Dabholkar Road, Malabar Hill, Bombay.

PHILATELIC SOCIETY OF INDIA.—Formed March 1897; Annual subscription Rs. 5. *Hon. Secretary and Treasurer :* E. Franklin DeSouza, 30-C, Khotachiwadi, Bombay 4.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by the late Mrs. Ramabai Ranade, the late G. K. Devadhar, and a few other ladies and gentlemen in Poona, and was registered in 1917. Its main object is to make women self-reliant, and to train them for missionary work, including educational and medical work, on a non-sectarian basis, amongst their sisters and brethern in backward areas, especially the former. Nominal fees are charged for instruction in all classes. There are eight different departments sub-divided into about 100 classes. The total number of women and girls on the rolls at the various Centres of the Society is about 2,401. There are in Poona three hostels, for women with 113 inmates including inmates from backward classes. Two fully qualified nurses have so far been sent by the Society for post-graduate course in Public Health Nursing at the Bedford College for women, London, with the partial help of a scholarship from the League of Red Cross Society, Paris. Besides, there are Maternity Hospitals, Nursing Homes and Infant Welfare Centres at Ahmednagar, Alibag and Sholapur under the management of the society in connection with other organisations. The institution is largely dependent upon public contributions and Government assistance. The annual expenditure of the whole organisation now exceeds Rs. 1,42,000.

President : Shrimant Sow. Rani Saheb of Phalton ; *Local Secretary and Treasurer :* Mrs. Yamunabai Bhat ; *Lady Superintendent and Secretary for Development and Collections :* Mrs. Jankibai Bhat ; *General Secretary :* G. B. Garud, B.A. (Senior Life Member) ; *Hon. Jt. General Secretary :* Dr. N. L. Ranade, B.A., M.B.B.S.

PRESS-OWNERS' ASSOCIATION, Bombay—Started on 30th April 1919 to promote the interests of the printing and litho presses and allied trades, to bring about harmony and co-operation among press owners and proprietors and to take such steps as may be necessary in furtherance of the above objects.

Office:—196 B, Gaiwadi, Girgaum, Bombay 4.

Secretary:—Manilal C. Modi.

RANGOON LITERARY SOCIETY.—*Patron :* H. E. The Governor of Burma ; *President :* B. R. Pearn ; *Hon. Secretary :* Mrs. F. E. Boot, 35, York Road, Rangoon.

RECREATION CLUB INSTITUTE.—This Institution —a philanthropic and humanitarian body—was established by the members of the Ismaili Dharmic Library in 1911 with the object of uplifting and elevating the poor, without distinction of caste or creed. It also tries to improve the social, economic and spiritual condition of the depressed (Harijan) and poor classes of people and with this intent has founded primary schools, associations and such other departments in order to ameliorate their condition and to achieve these objects by constructive and constitutional means. It also maintains orphanages, lecture halls and Missionaries who constantly travel and impart general education. It has branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sind), Poona, Warrangal, Gondia, Dhoraji, Burma and East Africa. It publishes three Anglo-Vernacular papers, namely the "Ismaili" (a weekly Anglo-Gujarati), "Al-Islah" (weekly Urdu), 'Nizari' (a monthly Anglo-Gujarati), for the benefit of its members and the propagation of Islam. Its central office is situated in Bombay at Kandi Moholla, Imamwada Road.

President : Major Ali Mahomed Mecklai, J.P., Hon. Presidency Magistrate ; *Hon. Secretary :* H. R. Sani, B.A., LL.B.

ROYAL SOCIETY OF ARTS, INDIA AND BURMA SECTION.—This Society was founded in 1754 "for the encouragement of Arts, Manufactures and Commerce," and devotes itself primarily to the application of science and art to practical purposes. The Society ranks as one of the three oldest learned societies in England, and numbered among its early members most of the famous Englishmen of the 18th century. During its long history it has been the source of many reforms and improvements in all branches of art and industry, and it is from its activities that most of the more specialised British societies have sprung.

The Society has from its earliest days extended its interests and membership to all parts of the British Empire, and in 1869 it founded an Indian Section (now the India and Burma Section), and a little later a Dominions and Colonies Section. The India Section is under the control of a Committee comprised largely of former Lieutenant-Governors of Provinces and others who have held the highest Indian administrative posts. Under its auspices a series of important lectures on Indian subjects is given each year, which, with the other lectures delivered before the Society, are published in the weekly "Journal" and circulated to members of the Society all over the world. There are a large number of Fellows resident in India. *Patron :* H. M. the King ; *President :*

THE SAFETY FIRST ASSOCIATION OF INDIA.—(Incorporated in 1932). Registered Office : Electric House, Colaba Causeway, Bombay. The Association is registered under Section 26 of the Indian Companies Act. The liability of its members is limited by guarantee to a contribution of Rs. 5. There are six classes of membership ranging from Rs. 5 per annum for Associate Members and Rs. 10 per annum for full Ordinary Members to a single payment of Rs. 1,000 for Supporting Life Member.

The aims, objects and activities include the promotion of safety teaching and safety measures for the prevention of accidents on roads, in factories, mines, workshops, schools and homes and the encouragement of co-operation between different sections of road-users and between employers and employed.

The maintenance of a continuous educational safety propaganda through the Press, Platform, the Wireless and the Association's monthly magazine "Safety News" and "Radiant Youth" as well as through other publications such as Industrial Safety Service Communiques, Games Lessons, "Stop Look Listen," Indian Highway Codes, periodical leaflets and posters combined with film exhibitions.

The holding of conferences, organisation of Safety Weeks, and the promotion of legislation covering all phases of road and industrial accident prevention.

Since the outbreak of the war, the Association has become the Civil Defence Educational Centre. Nearly 10,000 persons drawn from all parts of India have hitherto attended their weekly lectures and Intensive Courses. The Council will continue this great national service as long as need be.

President.—The Hon'ble Sir Rahimtoola Chinoy, Kt.

Hon. Jt. General Secretaries.—A. S. Trollip and Camar S. Tyabjee.

Bombay Provincial Branch.—Chairman : A. S. Trollip, O.I.E., J.P., B.Sc., *Hon. Secretary :* P. J. D'Souza.

Bengal Provincial Branch.—Chairman : Sir Henry Birkmyre, Bart. *Hon. Secretary :* J. B. Daymond.

Ahmedabad Provincial Branch.—Chairman : I. R. Bhagat, B.A., LL.B. *Hon. Secretary :* D. M. Asarpota.

Surat Local Branch.—Chairman : P. J. Taleyarkhan. *Hon. Secretary :* M. C. Benson.

Bihar Provincial Branch.—Representative : M. Tiwary, Jamshedpur.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society, founded by the late G. K. Gokhale in 1905, is a body of men who are pledged to devote their life to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote, by all constitutional means, the interests of the Indian people. Its present strength is 23 Ordinary members, 4 members under training and 1 permanent assistant. The Society has its headquarters in Poona with branches at Madras, Bombay, Allahabad and Nagpur, and other centres of work at Mayanur, Mangalore and Calicut in the Madras Presidency; Shendurjana in C. P.; Lucknow and Moradabad in U.P.; Lahore in the Punjab and Cuttack in Orissa.

The Society's work is primarily political but as it believes in all round progress of the Indian people, it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures, the non-official political organizations, deputations to foreign countries and propaganda.

In the field of social, economic and educational work, the Society's activities are equally varied. Some of its members are practically the founders of such institutions as the Poona Seva Sadan, Bombay and Madras Social Service Leagues, the U. P. Seva Samiti, and the Bhil Seva Mandal catering for the needs and uplift of the aboriginal tribes in Gujerat. The Seva Sadan has been a model institution for the education of women which gives training to over 1,500 girls and women in all useful directions. It has many branches in different parts of India carrying on social and educational work. The Social Service League has done good co-operative, educational and welfare work for the mill workers in Bombay by starting Co-operative Societies, adult night and technical schools and conducting welfare centres. The Seva Samiti is an unique organization in Upper India doing service to pilgrims visiting religious places such as Hardwar and Benares, and working in times of epidemics. Its Boy Scouts organization is a well-knit body recognised both by the public and Government. Mr. Chitalia, one of the Society's Workers, has started a rural centre at Amreli in Kathiawar. The Society has been conducting a model Depressed Class Mission in Mangalore and the Devadhar Malabar Reconstruction Trust activities in Malabar district. In the Co-operative field the Society has done pioneering work in the Bombay and Madras presidencies. During natural calamities such as floods, famines and epidemics, the Society has done relief work in every part of India. By its work in the Moplah rebellion, the Society has become a household name in Malabar. During recent years several members of the Society have paid special attention to rural reconstruction, including rural education.

The Society conducts two papers.—The *Dnyan Prakash*, the oldest Marathi daily, and the *Hitawad*, a tri-weekly issued from Nagpur. The Society has also published several pamphlets on public questions of the day.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The question of the subjects of Indian States has also engaged the attention of the Society and some of its members, particularly Messrs. S. G. Vaze and A. V. Thakkar are devoting a part of their energies to that work.

Hon. Pandit H. N. Kunzru, is the Persident, A. V. Thakkar, the Vice-President and D. V. Ambekar, the Secretary.

The Society is a non-communal, non-sectarian body which does not recognise any caste distinctions.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July, 1908, by the late B. M. Malabari, and Dayaram Gidumal. It is the pioneer Indian ladies' society for training Indian minstrant sisters and through them, serving the poor, the sick and the distressed. To spread its Gospel far and wide, the first branch was opened at Poona as early as 1909. The Society has its headquarters in Gamdevi, Bombay, and maintains the following departments of work; (1) Home for the Homeless; (2) Ashrams (Training Homes); (3) a Marathi Training College, with a primary School; (4) Home Education Classes; (5) Industrial Department including a workroom, where Sewing, Cutting, Hosiery, Cooking and Pastry, and machine and hand Embroidery are among the chief industries taught. The total number of women in the different classes is nearly 600.

Hon. Secretary: Miss B. A. Engineer, M.A., LL.B., M.B.E., J.P.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—Office and Homes at King's Circle, Matunga, Bombay.

The Objects of the Society are: To rescue children of all castes and creeds from the streets of Bombay, to prevent begging or other improper use of poor children by adults, to pass such children on to existing charitable institutions and to provide for those otherwise unprovided for, with the support and assistance of the police, to prevent children so far as possible from appearing in Police Courts, to prevent the public and private wrongs of children and the corruption of their morals, to take action for the enforcement of the laws for the children and if necessary to suggest new laws or amendments to the existing laws, to promote education, to provide and maintain an organisation for those objects, to do all other lawful thing, incidental or conducive to the attainments of the foregoing objects.

The Society is responsible for the pioneer work of training public opinion regarding the children's Act of 1924. It has also given a lead in the matter of training sub-normal children for which a special class is conducted in the Home. Subscription for Annual Membership, Rs. 10; for Life Membership, Rs. 100.

President: Kanialal M. Munshi; *Chairman*: Frank Oliveira; *Vice-Presidents*: Sir Byramjee Jeejeebhoy, Kt., Lady Blackwell, Sir J. B. Boman-Behram, Kt. *Hon. Secretaries*: Mrs. R. P. Masani, Mrs. K. Kania, Mrs. B. P. Seervai, Dr. J. S. Nerurkar. *Hon. Treasurers*: J. R. B. Jejeebhoy and M. A. Dabholkar.

WESTERN INDIA AUTOMOBILE ASSOCIATION—Lalji Naranji Memorial Building, Churchgate Reclamation, Bombay.—The objects of the Association include: the encouragement and development of motoring; the improvement of road communications; the provision for its members of a centre of information and advice on matters pertaining to motoring; the provision for its members of protection and defence of their rights as motorists; free legal advice and defence; facilities for touring abroad and the use of International Touring Documents. President: S. Guevrek; *Vice-Presidents*: J. M. Kamdar, B.A., LL.B., and S. N. C. Patuck. *Members of the Managing Committee*:—P. R. Bhat, J.P., N. M. Chinoy, J.P., Jamshed J. J. Cursetji, B.A., LL.B., Bar-at-Law, K. G. Dayal, D. E. Gough, B.Sc., J.P., P. P. Kapadia, O.B.E., F.R.I.B.A., B.A., B.E., J.P., B. N. Karanjia, J.P., M.L.C., M. B. Madgavkar, B.A., LL.B., S. J. McCann, N. V. Modak, B.E., M.I.C.E., M.I.E., J.P., Gordhandas G. Morarji, J.P., E. A. Nadirshah, B.A., B.E., B.Sc., J.P., H. E. Ormerod, J.P., V. C. Setalvad, M.A., LL.B., E. Sheehy, M.B.E., J.P. and A. S. Trollip, C.I.E., J.P.

Acting Secretary: Jehangir J. K. Patell, B.A., R.A., A.O.R.A.

Other Motoring Associations in India, Burma and Ceylon are: The Automobile Association of Bengal, 40, Chowringhee, Calcutta; The Automobile Association of Burma, No. 104, Strand Road, Rangoon; The Automobile Association of Ceylon, P. O. Box 338, Colombo; The Automobile Association of Northern India, Charing Cross, The Mall, Lahore; The Automobile Association of Southern India, 200, Mount Road, Madras and the United Provinces Automobile Association, 32, Canning Road, Allahabad.

WESTERN INDIA NATIONAL LIBERAL ASSOCIATION—(*Founded in* 1919).—The Association was formed, in pursuance of clause (*b*) of Resolution XI of the First Session of the All-India Conference of the Moderate Party, with a view to do sustained work for the political progress and the moral and material welfare of the people; to give expression from time to time to the considered opinion of the Party on matters of public interest; and to inform and educate public opinion in this presidency in support of its views, policy and methods.

The objects of the Association are the attainment by constitutional means of full Dominion Status for India at the earliest possible date. For the promotion of these objects, the Association shall adopt constitutional

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

methods of agitation and work and shall foster a spirit of broadminded liberalism based on principles of liberty, equality and fraternity among the different classes and communities of the people. For the fulfilment of these objects the Association shall carry on educative and propagandist work by means of leaflets, pamphlets and other publications, (*a*) representations to Government, (*b*) meetings or conferences, lectures and all such methods as may be deemed practicable and expedient to educate public opinion, and (*c*) for advancing the interests of the Liberal Party by organising and influencing elections to the legislatures, Central and Provincial, to Municipalities and District Local Boards.

The affairs of the Association are conducted by a Council consisting of 46 members who are elected every two years.

President: Sir Chimanlal H. Setalvad, K.C.I.E., LL.D.; *Vice-Presidents:* Sir Cowasji Jehangir, K.C.I.E., M.L.A. and D. G. Dalvi; *Hon. Secretaries:* J. R. B. Jeejeebhoy, A. D. Shroff and P. S. Bakhale.

Assistant Secretary: V. R. Bhende.

Office:—107, Esplanade Road, Fort, Bombay.

WOMEN'S INDIAN ASSOCIATION ("SESHADRI," MYLAPORE, MADRAS).—This Association was started in Madras in July, 1917, with aims of service.

Aims and Objects:—To present to women their responsibilities as daughters of India. To secure for every girl and boy the right of education through schemes of compulsory primary education, including the teaching of religion. To secure the abolition of child-marriage and other social evils. To secure for women the vote for Municipal and Legislative Councils on the same terms as it is or may be granted to men. To secure adequate representation of women on Municipalities, Taluk and Local Boards, Legislative Councils and Assemblies. To secure for women the right to vote. To establish equality of rights and opportunities between men and women. To help women to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training, guiding and forming the character of the future rulers of India. To band women into groups for the purpose of self-development and education and for the definite service of others.

It has 48 branches and over 4,000 members. Each branch is autonomous and works according to the needs of the locality.

The Association grants scholarships to girls, interests women in maternity and child-welfare work in the uplift of the depressed class and in other social and welfare activities for the general betterment of Indian society; has worked successfully for securing franchise for women in India, (see pages 93 and 94 of the Simon Report, Vol. II) and compulsory education for girls and also actually helped in the passage of Child-Marriage Restraint Act in the Assembly and the Acts for the Suppression of Traffic in women and children and the abolition of the Devadasi system, in the local legislature. The Association is an All-India body and has branches all over India, the largest being the Bombay Branch. The Association is affiliated to all the important progressive women's associations in India and throughout the world. It was the initiator of the All-India Women's Conference and the First All-Asian Women's Conference at Lahore. The Madras Seva Sudan and the Madras Children's Aid Society, and the Montessori School owe their origin to the efforts of this Association. The Association opened a Rescue Home to facilitate the working of the Rescue Section of the Immoral Traffic Act, enforced by Government. The Home was opened on 21st March 1934 by Lady Beatrice Stanley and is now under the Madras Vigilance Association.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This Association, which was founded by the late Sir George Williams in 1844, is now a world-wide movement, well established in almost every country in both the hemispheres. The aim of the Association is, through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men and boys.

The Young Men's Christian Association, though relatively new to India, is spreading rapidly. The 'local' Associations are autonomous and governed by local Boards of Directors. These Associations in Convention elect a General Board which is responsible for the supervision and expansion of all forms of the Association work in India, Burma and Ceylon.

There are now 65 Associations in large towns and cities and many village Associations with many thousands of members of all races and creeds. The following Associations own one or more buildings which serve as the local headquarters: Allahabad; Alleppey; Bangalore; Bombay; Calcutta; Calicut; Coimbatore; Colombo; Coonoor; Delhi; Galle; Hyderabad; Jubbulpore; Kandy; Karachi; Kunnamkulam; Kottayam; Lahore; Madras; Madura; Nagpur; Naini Tal; Ootacamund; Poona; Rangoon; Risalpur; Salem; Secunderabad; Simla; Trivandrum; Wellington. The others use rented or rent-free buildings.

The work of the National Council and of the local Association is carried on by numerous voluntary workers and Committees, assisted by 90 specially trained full-time Secretaries. A feature of the Y.M.C.A. in India is the international character of its Secretariat. It is made up of 4 Americans, 2 Canadians, 6 Englishmen, 3 Scotsmen, 1 Swedish, 1 Anglo-Indian, 3 Burman and 70 Indians and Ceylonese.

The work of the National Council (excluding that of the 65 local Y.M.C.As.) called for a Budget of Rs.71,029 and 12 annas in 1940. Of this sum Rs.21,000 had to be raised from the public in India.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are:—

Patron:—His Excellency The Most Hon. The Marquess of Linlithgow, K.T., P.C., G.M.S.I., G.M.I.E., O.B.E., D.L., T.D., Viceroy and Governor-General of India.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

President of the National Council :—Dr. S. K. Datta, Forman Christian College, Lahore.

National General Secretary of India, Burma and Ceylon—D. F. McClelland, 5, Russell Street, Calcutta.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street and Reynolds Road. The General Secretary is Mr. Joseph Callan. In connection with each branch there is a well-managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal menial employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This Association founded in the year 1875 was organised nationally in 1896.

The aim of the Association is to unite women and girls of India, Burma and Ceylon in fellowship and mutual service for their spiritual, intellectual, social and physical development. The Association exists for women and girls of all communities. There are the following branches:—General: 55; Schoolgirls 29; Fellowship Groups: 23; Girl Guide Companies: 25; and Blue Bird Flocks: 11. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible Study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established where there is a demand for them and the Association, at present owns 21, including 8 Holiday Homes in the hills. These hostels accommodate working girls, teachers, nurses, students and apprentices. Rates vary according to the residents' salaries and accommodation, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday Homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to Holiday Home, Summer Conferences are held annually at Anandagiri, the Conference estate owned by the Association, in Ootacamund and at Doon View, Mussoorie. Special Girls' Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs Employment Bureaux through the agency of which many girls find positions. The commercial schools train girls for office and business life. These larger Associations are manned by trained Secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. Though the majority of staff members are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year.

The Association, which is affiliated to the World's Young Women's Christian Association is international and interdenominational. Active membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman, regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H.E. The Marchioness of Linlithgow.

Copies of the Annual Report and other printed matter can be obtained from the National Office which is at 134, Corporation Street, Calcutta. The official organ of the Association is the leaflet "Everymember" which is issued each month and sent to members and friends of the Association.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are :—

(1) To facilitate intercommunication and co-operation between women of any nationality who are members of the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates: but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows :—

Hony. Local Secretaries.

Bombay	Mrs. W. Martin, M.A., 19, Gowalia Tank Road, Bombay 7.
Punjab	Mrs. Macnabb, Race Course Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organised public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureaus** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

The Federation of University Women in India unites various Associations of University Women throughout the country, its object being to promote friendship and understanding among University Women of all races resident in India and to further their common interests. It is affiliated to the *International Federation of University Women* which has a membership of over 60,000, representing thirty-three nations and which seeks by scholarships, exchange of teachers, group discussions and conferences to unite in common action and understanding the University women of the world.

The Federation in India is controlled by a Central Committee at present located in Bombay. It has branches in Bombay, Kodaikanal and Lahore, while women, eligible for membership, resident in places where no branch exists can be enrolled as "Scattered Members."

Office Bearers :—

President.—Mrs. McKenzie, M.A., J.P., Wilson College, Chowpatty, Bombay.

Hon. Treasurer.—Mrs. Platts, M.Sc., Y.M.C.A., Wodehouse Road, Bombay.

Hon. General Secretary.—Mrs. A. J. Moore, 31, Pedder Road, Cumballa Hill, Bombay.

Church Organisation in India.

ANGLICAN.

Down to March 1st, 1930, the Church of England in India (and Ceylon), though possessing its own bishops and Metropolitan, was in the eyes of the law an integral part of the Church of England, and subject to the general supervision of the Archbishop of Canterbury. By the Indian Church Act and the Indian Church Measure passed by Parliament in 1927 this legal connection was severed, and on March 1st, 1930, for the fixing of which date provision was made by the Indian Church Measure, the Church of England in India and in Ceylon, in future to be known as The Church of India, Burma and Ceylon, and, for short, The Church of India, (or of Burma or of Ceylon, in those countries) became wholly responsible for the management of its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Anglican work in India dates from the first establishment of the East India Company in the 17th Century on the shores of India at Surat, Madras, and Bombay, where the servants of the Company were ministered to by a continuous succession of chaplains. The first chaplain was the Revd. Peter Rogers, Surat, 1612. The first church built was St. George's, Madras, in 1680, followed by Bombay Church, now St. Thomas' Cathedral, in 1716. In South India the work of Danish and German Lutheran missionaries was assisted by the English S.P.C.K. (Society for the Promotion of Christian Knowledge), but missionary work was not attempted by the Church itself till the beginning of the 19th Century.

Like all other branches of the Anglican Communion the Church of India is episcopal. The first bishopric was not, however, founded until 1814 when the see of Calcutta was set up, the first bishop being Thomas Fanshaw Middleton. His jurisdiction at first included not only British India but the British settlements in Australia, the Straits, the Cape and St. Helena's. At the same time India was divided into three Archdeaconries, and two of these, Madras in 1835 and Bombay in 1837, were later erected into bishoprics. The three dioceses thus formed have been repeatedly subdivided, until in 1930 there were fourteen dioceses, the dates of their creation being as follows: Calcutta 1814; Madras 1835; Bombay 1837; Colombo 1845; Lahore 1877; Rangoon 1877; Travancore 1879; Chota Nagpur 1890; Lucknow 1893; Tinnevelly 1896; Nagpur 1903; Dornakal 1912; Assam 1915; Nasik 1929. Plans are in hand for the formation of two more dioceses out of Lucknow and Calcutta. Rangoon, Lahore and Dornakal hope also to be divided shortly. There are assistant bishops in the dioceses of Lahore, Calcutta and Dornakal.

Rules for the government of the Church are contained in its "Constitution, Canons and Rules" adopted by its General Council in session at Calcutta in 1930. All clergy before receiving a license from their bishop make in addition to an oath of canonical obedience to their bishop, a declaration accepting the Constitution, Canons and Rules, as well as a declaration concerning the faith and formularies of the Church. Lay members of the General and Diocesan Councils also make declarations of assent and acceptance. The government of the Church is through these councils, the General Council being for the whole ecclesiastical province of India, Burma and Ceylon. Its membership consists of the bishops of the province, and houses of clergy and laity elected by the diocesan councils. The Diocesan Councils consist of the Bishop of the Diocese and all its clergy, together with lay representatives elected by the parishes. To exercise a vote in the election of lay representatives parishioners must be adult communicant members of the Church. It is open to a diocese to add to these qualifications that of having contributed some specified amount to the expenses of the Church. In addition to these councils every parish has a Church committee or council with a recognized constitution and these are in many areas organised into district Church councils, particularly where Indian parishes are numerous. Again in addition to these councils the bishops of the province meet in Synod, with clerical and four lay assessors if a matter of faith or order is being dealt with, and the bishop of a diocese can at any time hold a Synod of his clergy. Determinations on matters of faith and order are made only by the House of Bishops of the General Council and cannot be made subjects of disciplinary action unless adopted in the form of a canon by the whole Council.

The additional title of Metropolitan was given to the Bishop of Calcutta when the sees of Madras and Bombay were formed. It is an ancient title similar to archbishop and indicates that its holder has jurisdiction over the other bishops of the province. Before consecration a diocesan bishop takes an oath of canonical obedience to the Metropolitan. Under the Constitution of the church bishops are elected by the diocese, subject to confirmation by the bishops of the province. In the Constitution, Canons and Rules, the Constitution consists of Declarations laying down the position of the Church of India as a part of the One, Holy, Catholic and Apostolic Church; the Canons lay down principles of government and organisation; the Rules arrange in detail for the carrying out of the Canons, and are more easily altered or added to than the Canons. The salaries and allowances of the Bishops of Calcutta, Madras and Bombay, have from the foundation of those sees been paid out of the Revenues of Government, as also in part those of the Bishops of Lahore, Rangoon, Lucknow and Nagpur. Down to 1930 these bishops were appointed by the Crown. Since 1930 the bishops of these seven dioceses are elected, and when the bishops occupying the first three sees in 1930 vacate their sees their successors will be paid in part only from a grant from Government for the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

episcopal supervision of its establishment of chaplains. For the other seven bishoprics, and for any others, set up, Government is in no way responsible.

The Ecclesiastical establishment of the Government of India is an inheritance from the East India Company. That Company from the first provided chaplains for its servants. The chaplains of the present establishment are maintained for ministration to the Government's British born servants, civil and military. They are chosen by the Indian Chaplaincies Board sitting in London, are appointed by the Secretary of State, are posted to Dioceses by the Governor-General in consultation with the Metropolitan, and within their Dioceses are posted to stations by the Provincial Governor on the recommendation of the diocesan bishop. Their pay and allowances are wholly met by Government. In spiritual matters they are subject to the supervision and jurisdiction of their bishop, and while Government servants civil and military are their primary charge, they are the parish priests of the chaplaincies to which they are appointed and are responsible for the care of all members of the church in their parish except in so far as Indian Members of the Church are cared for by missionaries or Indian clergy. Besides providing chaplains the Government of India, again following the practice of the East India Company, has provided or assisted in the provision of churches and their maintenance, and also of cemeteries. Where numbers do not warrant the provision of an Establishment chaplain Government has assisted in the provision of clergy by grants-in-aid, and when from time to time the number of Establishment chaplains has been reduced special grants-in-aid have been granted. The Establishment and all grants-in-aid are subject to revision and are in fact revised from time to time.

(The Ecclesiastical establishment includes besides Anglican chaplains, Church of Scotland, Free Church, and Roman Catholic chaplains, for ministrations to members of those communions; and churches and grants-in-aid are provided or given on the same principles as for Anglicans.)

The special interests of those parishioners whose domicile is England in the continued use, should they so desire, of the services of the English Prayer Book, Which the Church of India is now free to alter at its discretion, are safeguarded by certain of the canons, and these interests together with other matters concerning the undertakings and relation of the Government of India to its chaplains and the Church are provided for by a set of Statutory Rules drawn up under the Indian Church Act. Members of the Church of England or any of the branches of the Anglican Communion are, while resident in India, full members of the Church of India, and are a most important part of the Indian Church, their numbers still in some places exceeding those of Indian members, and some stations being still exclusively European, although in the Church as a whole the number of Indian members greatly exceeds that of Europeans. European clergy numbered 389 in 1939, and Indian clergy 716. There are no racial distinctions whatever in the Church Indian clergy frequently preach or celebrate for European congregations, and in a few instances are in permanent charge of European parishes. The Indian laity though usually preferring services in their own languages are everywhere free to attend English churches, and to be enrolled, if they wish, as parishioners.

The education of European children, and more particularly the children of the Domiciled and Anglo-Indian community, has from early days been a concern of the Church. In addition to day-schools it has established over 70 boarding schools for boys and girls, many of them in hill stations. The provincial Governments assist these schools with grants-in-aid both for building and current expenditure, just as they do all other schools, according to the rules of the education codes. The schools are inspected by Government inspectors. Indian boys and girls are admitted to these schools, but the number that may be taken is limited to a percentage fixed by the local Government. An appeal issued by the Archbishop of Canterbury in 1938 for the endowment of these schools had produced by June, 1939, just under £36,000. The fund is known as The Anglo-Indian Schools Fund and is still open for the receipt of donations. Indianisation of Government services, especially of the railways, customs and post and telegraph departments has severely hit the Domiciled and Anglo-Indian community, and the ability of parents to pay fees is steadily decreasing. Hence the urgent need for increased endowments. The existing endowments of all the schools yield an income of less than £1 per child per annum.

(The Church of India is not the only community responsible for European education in India. The Roman Catholics, the Church of Scotland and the various free churches provide schools for their children, and receive similar assistance from Government.)

The Government of India Act of 1935, section 83, provides for the continuance of government grants to European schools at a total figure in each province not less than the average figure for the ten years preceding 1933, unless the whole grant of a government to education is reduced, when the grant to European education may be reduced in proportion. And, as a result of the recommendations of a sub-committee of the Round Table Conference, provincial boards. For Anglo-Indian and European Education have been set up, and also an Inter-Provincial Board, to consider and advise Governments on matters connected with the schools.

Missions.

In Malabar, on the south-west coast of India, there have been Christians certainly from the 6th century, probably from the 4th century and possibly from the 1st century A.D. They are called "Syrian" Christians owing to their connection with the Church in Syria. They do not appear to have attempted to spread the Christian faith in India. The Portuguese may therefore be regarded as the first missionaries in India, and from their arrival at Goa the Franciscans and Dominicans who accompanied their fleets in large numbers threw themselves with great activity into the work of evangelism.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The formation of the Society of Jesus led to one of its first members the famous St. Francis Xavier being sent to Goa, where he arrived in 1541. Under his leadership the preaching of Christianity was carried on with great earnestness. The missionary work of the Roman Catholic Church thus begun has been continued, and at the present day the number of Indian members of that Church is given as 2,113,659 (Census 1931), to which may be added 654,939 Syrian Christians attached to the Roman Church. The number of independent Syrian Christians (Census 1931) is given as 525,607.

Protestant missions did not begin till the 18th Century, and as missionaries were not allowed to establish themselves in the Company's territories, they worked from Danish territory and in Indian States. These missionaries were Lutherans, but as stated above, were in the latter part of the 18th Century assisted with funds from England. Famous men among them were Ziegenbalg, Kiernander, Schultze and Christian Friedrick Schwarz. By the end of the 18th Century it is believed that there were in South India about 30,000 Lutheran converts. In 1800 the famous Baptist trio, Carey, Marshman and Ward established themselves at Serampore in Bengal (Carey had come to India in 1793). Men of humble origin and education, one was a cobbler, one a ragged-school teacher, and one a printer, they displayed great ability and enterprise, and threw themselves not only into evangelism but into the scientific study of India, its languages and culture, and its flora and fauna. Books and translations poured from their printing press. Carey was made professor of Sanscrit in Lord Wellesley's College for the training of civil and military officers.

The 19th Century saw a great increase in missionary effort of every sort. This was due to the opening of the Company's territories to missionaries by the Government of India Act of 1813, and it was only after that date that Anglican (Church of England) missionary Societies took up work in India, namely the Church Missionary Society and the Society for the Propagation of the Gospel, by sending as missionaries ordained clergy of the Church of England, those hitherto subsidised or sent by the S.P.C.K. (see above) being Lutherans. The first missionaries to arrive after the passing of the Act were American Congregationalists. The London Missionary Society were also early in the field and Presbyterians from America and Scotland soon followed. In the course of the century India became covered by a net-work of missions, engaged not only in evangelism, but in educational work in schools and colleges, in medical work and in industries. Among famous names of missionary educationalists are those of Dr. Duff of Calcutta, and Dr. Wilson in Bombay. In the education of women missions may fairly claim to have taken the lead. The total number of missionary societies from Europe and America working in India is now over 150. For consultation and common action there is a National Christian Council with headquarters at Nagpur, first organised in 1914, and in connection with this there are 10 Provincial Christian Councils. Membership of these councils is by election or appointment by local churches and mission councils.

The Directory of the National Christian Council shows that the missions connected with it have 53 Colleges; 315 High Schools and about the same number of middle schools; 103 Teachers training institutions; 217 industrial schools, and very many primary schools; 250 hospitals and about the same number of dispensaries; 68 Leper institutions and 11 Tuberculosis Sanatoria, and 15 homes for the Blind or Deaf; 64 Agricultural Settlements; 31 Co-operative Societies; 40 printing presses; 36 miscellaneous industries. The Census of 1931 gives 3,002,558 as the total number of Protestant Christians in India, making the total number of Christians, including Roman Catholics, Romo-Syrians and Syrians (see above) 6,296,763; included in this total are 167,771 Europeans and 138,758 Anglo-Indians.

Reunion.

Since the Great War there has been wide spread interest in India in the subject of the reunion of the separated Christian bodies. In South India the movement for union was started in 1919 by a group of Indian clergy. This has led to the preparation of an elaborate scheme of union the parties to which are Anglicans, Methodists and the already united South Indian United Church which consists of Presbyterians and Congregationalists. Much time and thought have been given to the preparation of the scheme, the problem presented by the task of reconciling Anglican, Presbyterian, Wesleyan and Congregationalist principles being of extreme difficulty.

If the scheme is accepted the four southern dioceses of the Church of India, Madras, Dornakal, Tinnevelly and Travancore will be separated from the rest of the province and form part of the united Church, which is pledged to maintain episcopal government. The general principles of the scheme were approved by the Lambeth Conference (of Bishops of the Anglican Communion) in 1930, but it has not yet (1940) been sufficiently completed in detail for final submission to Diocesan Councils.

The existence of a united church in South India consisting of Congregational and Presbyterian elements has been mentioned in the preceding paragraph. In north India there has been in existence for some years The United Church of India (North) consisting of similar elements. Since 1929 a further movement for a wider union in north India has been considered at a series of Round Table Conferences to which the Church of India has sent representatives. In south India, again, a movement has started for union between two sections of the Syrian Church (the Orthodox and the Mar Thoma Reformed) and the Anglican Church, and the Church of India has agreed to send delegates to the Kerala Council of Church Union responsible for this movement (Kerala is a general name for the area covered by the States of Travancore and Cochin and the district of British Malabar).

Anglican Missions.

In addition to the two principal missionary societies of the Church of England, the S.P.G. (Society for the Propagation of the Gospel in Foreign Parts) and the C.M.S. (Church Missionary Society) already mentioned, whose missionaries in India, Burma and Ceylon number (1939)—

	Ordained.	Laymen.	Women.	Total.
S.P.G. ..	79	23	167	269
C.M.S. ..	65	28	127	220+60

married women, there are also certain smaller, but important missions, namely The Oxford Mission to Calcutta working in Calcutta among students and also at Barisal; the Cowley-Wantage-All Saints Mission, working in Poona and Bombay; the Dublin Mission at Hazaribagh, the Cambridge Mission at Delhi, the Cawnpore Brotherhood; the Scottish Episcopal Church Mission, at Chanda C.P.; the Bible Churchmen's Missionary Society (12 ordained missionaries in the Lucknow and Nagpur and Rangoon dioceses); the Christa Seva Sangha, Poona, 1927 and the Christa Prema Seva Sangha, Poona 1934; the Canadian Church Mission (4 ordained missionaries in the Lahore Diocese); the Church of England Zenana Missionary Society, in several dioceses; the Sisters of St. Margaret (East Grinstead) in the Colombo diocese; Sisters of St. Denys (Warminster) in the Chota Nagpur Diocese; Sisters of the Holy Family, Naini Tal; the Winchester Brotherhood, Mandalay, and the Sisters of the Church, Maymyo. The first two of these, and several of the others in the list, consist of communities of priests or sisters under religious vows. Members of the brotherhoods mentioned are in most cases not under life vows. The work and influence of these communities is a most important element in the life of the Church of India.

The Church of India has taken its full share in educational, medical and industrial work in India. Among colleges founded and managed by its missionaries St. Stephen's, Delhi, St. John's, Agra, St. Columba's, Hazaribagh, Christ Church, Cawnpore, and Trinity College, Candy; are well-known. A college at Trichinopoly has been amalgamated with the inter-denominational Madras Christian College. For the training of Indian and Anglo-Indian ordination candidates Bishops' College, Calcutta, serves the whole of India. In the various language areas are other colleges for the training of ordinands and lay church-workers through the medium of the local language. Among hospitals made famous by the work of the doctors in charge are those at Quetta (Sir Henry Holland), Bannu (the late Dr. Pennell) and St. Stephen's Delhi (for women). The C.M.S. High School at Srinagar is distinguished among the many High Schools of the Church for the methods adopted to develop manliness and *esprit de corps* in the boys. Cawnpore in the north and Nazareth in the extreme south are well-known centres of industrial work and training. The Diocesan Press at Madras was built up into a very large and efficient institution by a retired C. M. S. Missionary. At Hubli, in the Bombay Diocese, S. P. G. missionaries have, since 1919, done extremely good work in charge of an Industrial Settlement (for the reformation and training of members of criminal tribes) committed to their care by Government.

Exact figures of the membership of the Church of India are not obtainable. From figures, available there appear to be about three quarters of a million (750,000) of which about a lakh and a half (150,000) are European and Anglo-Indian; dioceses, with large numbers of Indian Christians are Dornakal, Tinnevelly, Travancore, Lahore, Madras, Calcutta, Lucknow, and Chotta-Nagpur. The number of clergy, European and Indian, has been given in an earlier paragraph.

Bengal Ecclesiastical Department.

Westcott, Most Rev. Foss, D.D.	Lord Bishop of Calcutta and Metropolitan of India.

Senior Chaplains.

Young, Ven'ble Ernest Joseph, B.A.	Archdeacon of Calcutta and Senior Chaplain of St. John's Church, Calcutta.

THE ROMAN CATHOLIC CHURCH.

The Catholic community is composed of the following elements:—

(1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.

(2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Animism in recent mission centres.

(5) Recent converts from the Jacobite community in Malabar, of which 3 Bishops, 71 priests and some 28,000 laity have been received into the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of **Extraordinary Ecclesiastical Affairs**:—

The archbishopric of Goa and Damaun (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).

Under the Sacred Congregation of **Oriental Churches**:—

The archbishopric of Ernakulam, with suffragan bishoprics of **Changanacherry, Kottayam and Trichur.**

The archbishopric of Trivandrum, with suffragan bishopric of **Tiruvella.**

Under the Sacred Congregation of **Propaganda Fide**:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere and the Prefecture Apostolic of Indore.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin, and the Missions of Ahmedabad and Karachi.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur, Patna and Shillong and the Prefecture Apostolic of Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam, Nagpur, Bezwada and Cuttack, the Prefecture Apostolic of Jubbulpore, and the Mission of Bellary.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Delhi and Simla, with suffragan bishopric of Lahore and the Prefectures Apostolic of Kashmir and Multan.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar, Trivandrum and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number over 2,000 besides which there is a body of secular clergy mostly Indian, etc., numbering about 2,400, and over 9,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education in 1936 exceeded half a million. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of *the Society for the Propagation of the Faith* and of *the Holy Childhood*, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated; Calcutta, 1914; Bombay, 1919; Madras, 1921. There are 17 chaplains on the staff. Some of these are attached to the Scottish battalions in India, while the others minister to the civil population of the towns where they are stationed and to those living in the smaller outstations in their respective areas. In addition to the regular establishment, there are a number of ministers throughout India who are maintained by the various communities to whom they minister and by the Additional Clergy Societies in India; Missionaries of the Church also maintain regular services in English in many centres. There are three Presidency Senior Chaplains in charge of this branch of the Church work in Bengal, Bombay and Madras respectively.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium of instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. In the Punjab Evangelistic work is being carried on from eight centres, and the baptised Christian community now numbers over 30,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 15,000. In the eight mission district of Calcutta, the Eastern Himalayas, Madras, Santalia, Rajputana, Nagpur, Western India, and the Punjab there were at the end of 1938 over 70,000 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much for education in India. The Church in Bombay has six representatives on the Governing body of the Anglo-Scottish Education Society, and exercises pastoral supervision over the Bombay Scottish Orphanage. The now well-known St. Andrew's Colonial Homes at Kalimpong, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now over twenty cottages, and about

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

700 children in residence. The Church has many schools in all parts of its field, and it has also made a large contribution to the work of higher education in India through five Christian Colleges. The Scottish Church College, Calcutta, is well-known. The Madras Christian College, which has been rebuilt on a magnificent site at Tambaram and which has recently been the meeting place of the world Missionary Conference, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, Hislop College, Nagpur, and Murray College, Sialkot. The Church also carries on important medical work. There are nineteen Mission Hospitals at different centres, among which are four excellently equipped and staffed Women's Hospitals in Madras, Nagpur, Ajmer and Poona. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons: "The Church of Scotland, Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 190 missionaries and 798 Indian and Singhalese workers. Connected with the Society are 487 Indian and Singhalese Churches, 313 Primary Day Schools, 25 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1939 stood at 27,821 and the Christian community at 71,997. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi where there are hostels for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College with its Royal Charter granted by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of Purchase of the Settlement of Serampore in 1845, was placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary educational operations, in Arts and Theology. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

In Arts and Science the College prepares for the Calcutta Examinations. *Principal*: Rev. G. H. C. Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 7 Hospitals. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev. D. Scott Wells, 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1939 amounted to £166,040 of which £69,724 was expended in India and Ceylon.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu and Oriya Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 20 stations and 632 outstations with a staff of 85 missionaries including 8 qualified physicians, and 1,378 Indian workers, with Gospel preaching in 1,659 villages. Organised Churches number 136, communicants 31,778 and adherents 36,000 for the past year. Forty-nine Churches are entirely self-supporting. In the Educational department are 440 village day schools, with 22,700 children, 12 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,300 pupils. There are 6 Hospitals, two leper-asylums and an Orphanage. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 50 per cent. Indian Secretary: The Rev. G. P. Barss, Cocanada.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma began 1813; Assam, 1836; Bengal and Orissa, 1836; South India, 1840. It owes its origin to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 32 main stations of the Mission in Burma, 11 in Assam, 10 in Bengal and Orissa, and 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic, educational and medical, and the training of the indigenous pastors, preachers and Bible-Women, and extends to many races and languages. The most important result of its work in Burma has been the practical transformation of the Karens and the Kachins whose languages have been reduced

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to writing by the Mission. The Chins of the Chin Hill Tracts are also progressing along these lines under the influence of the Mission. The work in Assam embraces 11 different languages, and great efforts are being made amongst the employees of the tea plantations. The Mission Press at Rangoon is one of the largest, and the finest in Burma.

In the year 1939 the field staff numbered 273 missionaries, 6,357 indigenous workers. There were 2,890 organised Churches of which 2,302 were self-supporting. Church members numbered 3,16,021. In the 2,172 Sunday Schools were enrolled 1,06,201 pupils. The Mission conducted 2,139 schools of all grades, Judson College at Rangoon and the Agricultural School at Pyinmana being among them, with 90,019 students enrolled. 13 hospitals and 34 dispensaries treated 15,323 inpatients and 1,10,533 outpatients. Christians of all communities among whom the Mission works, contributed over Rs. 4,97,865 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION was opened in 1836, and has 11 main stations staffed by about 45 missionaries. There are 851 native workers, 997 organized churches, 68,231 baptised members, 437 schools of all grades including 2 High, 2 Normal, 3 Bible and 10 station schools. 4 Hospitals and 5 Dispensaries treated 2,380 in-patients and 27,661 outpatients during the year. Mission work is carried out in 11 different languages.

Treasurer and Corresponding Secretary: Miss Marion G. Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION.—commenced in 1836. Area of occupation: Midnapore district of Bengal, Balasore district of Orissa and Jamshedpur Town of Bihar. Work chiefly for Oriya and Santal peoples.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 27 Australian workers. There are 4,103 communicants and a Christian community of 7,794.

Secretary, Field Council: The Rev. W. G. Crofts, Mission House, Birisiri, P. O. Hatshibganj, Dist. Mymensingh, E. Bengal.

THE STRICT BAPTIST MISSION.—Has 20 European Missionaries, and 213 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevelly Districts. Communicants number 1,672; organised churches 63; Day and Sunday schools 110, with 4,028 pupils.

Treasurer: Rev. D. Morling, Kovilpattl, Tinnevelly District.

Secretary: Rev. D. A. Thrower, Kilpauk, Madras.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION:—Operates in Gujarat and Kathiawar with a staff of 34 Missionaries, of whom 11 are clerical, 15 Educationalists, 5 are Doctors and 3 Nurses. The Indian staff numbers 535, of whom 22 are Pastors, 96 Evangelists, 2 Colporteurs, 37 Bible-women, and 378 are Teachers. There are 22 Organised Churches, a communicant roll of 3,275, and a Christian Community of 9,405. In Medical work there are 5 Hospitals including one at Dohad and several Dispensaries, with 3,724 in-patients, 23,808 new cases, and a total attendance of 88,677. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantij and 112 Vernacular schools affording tuition for 8,177 pupils; also 1 creche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad, a Divinity College at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 5 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with Farm Colonies attached.

Secretary: Rev. George Wilson, B.A., Rajkot.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of this Church was established at Sialkot in the Punjab, in 1855. It is now carrying on work in eight civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 81. Its educational work composes one Theological Seminary, one College, four High Schools, one Industrial school, 8 Middle schools and 83 Primary schools. The enrolment in all schools in 1939 was 10,334. Medical work is carried on through five Hospitals and 7 Dispensaries. The Communicant membership of the Church which has been established is 45,461 and the total Christian community 99,988.

General Secretary: W. H. Merriam, M.A., American Mission, Gujaranwala.

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections, known as the Punjab (1834), North India (1836) and Western India (1870) Missions. According to statistics for the year ending March, 31, 1940, the American staff, including women and special-term Missionaries numbers 228, and the Indian staff 932. There are two and thirty main stations and 200 out-stations. Organised churches number 121 of which 40 are entirely self-supporting. There are 16,582 communicants and a total baptized community of about 68,000.

Educational work as follows:—Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for Woman,—students about 3,000; one Theological College, students 35 and an interest in Poona Theological College; two Training Schools for Village Workers; thirteen High Schools; two Industrial Schools; three Agricultural Demonstration Farms; four Teachers' Training Departments; The Miraj

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Medical School and an interest in the Ludhiana Medical College for Women; 125 Elementary Schools; 161 Schools of all grades,—pupils about 11,596.

Medical Work:—Eight Hospitals; Seventeen Dispensaries.

Evangelistic Work:—211 Sunday Schools, with an average attendance of 5,287 pupils. Contributions for church and evangelistic work, on the part of the Indian church, have increased slightly, and amount to Rs. 45,371.

The Hospital at Miraj, founded by the late Sir William J. Wanless and under the care of R. H. H. Goheen, is well-known throughout the whole of South-West India, and the Forman Christian College of Lahore, under the principalship of Dr. S. K. Datta, is equally well-known and valued in the Punjab. The Ewing Christian College (The Rev. C.H. Hazlett, Ed.D.,Principal) and Allahabad Agricultural Institute (Dr. S. Higginbottom, Principal) have grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions in India.—The Rev. J. B. Weir, Ph.D., D.D., "Lowriston," Dehra Dun, U.P.

Secretary, North India Mission.—The Rev. K. L. Parker, Ph. D., A. P. Mission, Fatehgarh, U. P.

Secretary, Punjab Mission.—The Rev. R. M. Ewing, Mission Compound, Dehra Dun, U.P.

Secretary, Western India Mission.—Mr. J. L. Goheen, LL.D., A. P. Mission, Sangli, S.M.C.

THE NEW ZEALAND PRESBYTERIAN MISSION—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Miss E. L. Saunders, Jagadhri; Dist. Amballa.

THE UNITED CHURCH OF CANADA MISSION.—Commenced in 1877, has 14 main stations in Indore, Gwalior, Rutlam, Dhar, Jaora, Sitamau, Bhopal and Banswara States. The Mission staff numbers 71, Indian workers 200. This Mission works in conjunction with the Malwa Church-Council and also the Ratlam Church Council of the United Church of Northern India, which reports for this part of its territory. Organised churches 62; Unorganised churches 4; Communicants 4,147; Baptised non-communicants 21,800; Unbaptised adherents 10,621; Total Christian Community 36,568.

Educational work comprises Elementary and Middle Schools for boys and girls; a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Union Theological Seminary. Women's industrial work is carried on in Mhow and Rutlam, and Vocational Training for boys is a feature of the Rasalpura Boys' School, where training is provided in printing, tailoring, carpentry and welding.

The medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and outstations.

General Secretary of Mission:—Rev. A. A. Scott, M.A., B.Paed., D.D., Indore, C.I.

Associate Secretary of Mission:—Miss F. E. Clearihue, Kharua, C. I. (*Via* Mehidpur Road Station).

Secretary of Malwa Church-Council:—Rev. J. W. Netram of Sehore, C.I.

Secretary of Ratlam Church Council:—Rev. T. B. McMillan, B.A., Neemuch, C.I.

THE CANADIAN PRESBYTERIAN MISSION operates in two sections, the Northern Section with headquarters at Jhansi in the U.P., and the Central India Section, known as the Southern Bhil Field.

In Central India the Mission comprises within its area the States of Alirajpur, Barwani, Jobat and Kathiwara also parts of the States of Jhabua, Chhota Udaipur (in the Bombay Presidency) and Dhar, Indore and Gwalior bordering on the Jobat-Barwani Road. The five central stations are Amkhut, Mendha and Alirajpur located in Alirajpur State, Jobat in the State of Jobat and Barwani in Barwani State. The staff consists of 16 missionaries and 50 Indian workers. There are several elementary schools in the area and a central Anglo-Vernacular School at Amkhut in which upwards of 300 children are being educated. At Amkhut also there is a Children's Nursery Home. At Jobat there is a General 60 bed Hospital with a Canadian Medical man, Dr. W. R. Quinn in charge.

There are in the district 7 organized and 2 unorganized congregations with a Communicant membership of 375 and a baptized community of slightly over 1,500.

Secretary:—Dr. W. R. Quinn, Tobat, Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of 9 missionaries and twenty-five Indian workers who are engaged in Jhansi city, Esagarh, Baragaon, Babina and the surrounding villages.

Activities include Anglo-vernacular middle schools for both boys and girls and hostels for Christian pupils in each. There are also an orphanage for children under school age, a dispensary. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary.—Mrs. A. Mackay.

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 54 Missionaries and 1,200 Indian workers, occupies stations in Assam in the Khasi and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khasi language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 49,498; the total Christian community 128,291; organised Churches 802; Elementary schools number 682. Scholars 23,577; in addition to Industrial Schools and Training Institutions

3 Theological Seminaries, Sunday Schools 1,033. Four Hospitals and several Dispensaries provide annually for more than 20,000 patients.

Secretary: Rev. G. Angell, Jones, P.O. Jowai, Shillong, Assam.

THE ARCOT MISSION OF THE REFORMED CHURCH.—(In America). Organised in 1853 and occupies most of the North and South Arcot and Chittoor Districts in South India with a staff of Missionaries and Indian Workers.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarters of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Arogiavaram P.O., Chittoor District.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—The American Board of Commissioners for Foreign Missions of Boston, Mass., U.S.A. has two large missions in India, the American Marathi Mission and the Madura Mission. The Marathi Mission covers a considerable portion of Bombay Presidency with centres at Bombay, Ahmednagar, Rahuri, Vadala, Sirur, Sholapur, Satara and Wai. It was established in 1813, the first American Mission in India. Its activities are large and varied. The staff for 1940 included 34 Missionaries and 428 Indian workers, operating in 11 stations and 151 out stations. There are 58 churches with 6,353 communicants. Besides conducting 6 secondary and training schools with 1,109 pupils, the mission has a large share in various union educational enterprises. There are 50 primary schools and 6 kindergartens with a total of 3,507 pupils. In the hospitals and dispensaries during the year, were treated a total of 62,528 patients. The mission has six major social service centres and two out-stations staffed by 58 workers. During 1940 these rendered various services to 686,830 persons. *Secretary:* Miss E. Loleta Wood, Rahuri, Dist. Ahmednagar.

MADURA CHURCH COUNCIL.—Of the South, India United Church. This body administers all affairs connected with the Church and with elementary education in the villages. The Secretary is Rev. Paulraj Thomas, B.A., B.D., Tirumangalam, Madura Dist.

MADURA MISSION SANGAM.—This Sangam now carries on all the work formerly administered by the Madura Mission, except the American College. The institutions under the Sangam are:—

The Pasumalai High and Training School for Boys; The Capron Hall Training School for Girls; The O. C. P. Memorial High School for Girls, Sokkikulam, Madura. The Union Theological Seminary, Pasumalai; The Lucy Perry Noble Institute for Women; The Willis F. Pierce Memorial Hospital for Men and the Hospital for Women and Children; The Trade School, Pasumalai.

Secretary.—Rev. E. E. White, B.A., B.D., Manamadura, Ramnad Dist.

THE AMERICAN COLLEGE, MADURA.—The American College, then located at Pasumalai, was affiliated with the University of Madras as a second Grade College in 1881. In 1904 the College Department was removed to Madura where for five years it was accommodated in what is now the Union Christian High School building. In 1909 the College was removed to its present site in Tallakulam on the north side of the Vaigai river. It was affiliated as a First Grade College in 1913.

In 1934 at the time of the centenary of the Mission, the American College became organically independent under its own Governing Council. In the same year it was granted affiliation as an Honours College.

The present College site comprises about forty acres. On the College grounds are located the Main College Hall, the Ellen S. James' Hall of Science, Binghamton Hall, the Chapel, Daniel Poor Memorial Library, Main Hostel, Zumbro Memorial Hostel, Dining Halls, Principal's residence, Warden's Lodge, four additional bungalows, and athletic fields.

AMERICAN MADURA MISSION.—*Secretary,* Rev. John J. Banninga, M.A., D.D., Pasumalai, Madura Dist. American College, Madura: Edgar M. Flint, Esq., M.A., Principal. Willis F. Pierce Memorial Hospital, Madura: E. W. Wilder, M.D., Medical Officer. Hospital for Women and Children, Madura: Miss I. M. Roberts, M.D., Medical Officer.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—The mission staff in Khandesh is represented by 29 missionaries and 71 Indian Workers. There are 653 Church members and 1,313 pupils in Sunday Schools. 34 Elementary Schools provide for 775 pupils.

Secretary.—Miss Olga E. Noreen, Yaval, East Khandesh.

THE SWEDISH ALLIANCE MISSION.—Working among Bhils, Hindus and Mahommedans in West Khandesh, has 25 missionaries and 80 Indian workers. There are 8 congregations with a total membership of 1,352 of whom 666 are communicants. There are 10 Elementary Schools, 2 Training Schools and 4 School Homes. The pupils in all schools number 500.

Secretary:—Rev. Fredrik Franklin, B.A., Nandurbar, West Khandesh.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore State. The Mission engages in every form of Missionary activity.

UNION INSTITUTIONS.—With which the London Missionary Society is connected, and is a contributing Body. Number of Institutions 13; Schools, 6; Scholars, 1,963; Colleges, 7; Students, 1,286.

The European Staff of the Society numbers 82; Indian Workers, 2,416; Organised Congregations, 922; Communicants, 32,635; Christian Community, 204,031; Christian Colleges, 1,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Students 185; Training Institutions, 4; Students, 337; High Schools, 12; Boarding Schools, 25; Boarders, 2,084; Elementary Schools, 635; Elementary Scholars, 59,587; Head-Stations, 22, Out-Stations, 1,095. In Medical Work Head Station Hospitals number 6, Out-Station Hospitals, 13; Dispensaries, 2; Number of Beds, 811, In-patients, 15,342; Out-patients, 229,381; Doctors, 38 (including 8 Europeans); Assistants, 33; Nurses, 64 (including 8 Europeans); Nurses in Training, 92; Theological Institutions, 2; Students, 48.

The main centres of the Mission in N. India are at Calcutta and Murshidabad District, Bengal; L.M.S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City, of which the Rev. S. R. Holt of the W. M. S. is Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras. The S. India district and Travancore are divided into Kanarese, Telugu, Tamil and Malayalam fields with 22 stations and 1,095 out-stations. At Nagercoil (Travancore) is the Scott Christian College and High School with 974 students, a Church and congregation said to be the largest in India and a Printing Press, the centre of the S. Travancore Tract Society.

India—Secretary and Treasurer—Rev. L. J. Thomas, 18, Lavelle Road, Bangalore.

Bengal Secretary:—Rev. Hilary A. Wilson, B.A., 1/C, Ashutosh Mookerji Road, P. O. Elgin Road, Calcutta.

Benares Superintendent.—Rev. S. R. Holt, Ramkatora, Benares Cantonment, U. P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar province much earlier. Work is carried on in the provinces of Berar, Khandesh and Gujarat. There is a staff of 50 missionaries and 100 Indian workers. The number of mission stations is 16, with 16 out-stations. There is a Christian community of 2,600 adults. There are 33 churches, with 15 Indian pastors. The mission conducts 4 boarding schools, 2 for boys and 2 for girls. There is one English congregation at Bhusawal.

Executive Secretary.—The Rev. K. D. Garrison, Akola, Berar, C.P.

THE CHURCH OF THE BRETHREN (AMERICAN).—Opened work in 1894, and operates in Broach, Surat and Thana Districts, also in Baroda and Rajpipla States. Its staff number 45 foreign workers including missionaries' wives, and 225 Indian workers. The baptized (immersed) membership stands at 7,129. Education is carried on in 2 Boys' Boarding Schools, 2 Girls' Boardings, and in 3 Co-educational Boardings with separate hostel quarters. Village Day Schools number 112. Females under instruction number 921, males 3,127, total 4,048. There are 101 Sunday Schools having 177 teachers, and a total enrolment of 5,538. There were 47,263 calls at Mission dispensaries in 1940. The foreign medical staff consists of 4 doctors, and three nurses. Industrial work is carried on in 5 of the Boarding Schools. A vocational, school, including teachers' training, village trades and agriculture for boys and a school of practical arts for girls are conducted at Ankleswar. Evangelistic, Temperance and Publication work receive due emphasis.

Secretary:—L. A. Blickenstaff, 115, Mahatma Gandhi Road, Bombay.

THE POONA AND INDIAN VILLAGE MISSION—Founded in 1893. Mission Stations:—Poona, Khed Shivapur, Poona District; Nasrapur and Bhor (Bhor State), Poona District; Lonand, M. S. M. Ry., Satara District; Phaltan (Paltan State), Satara District; Pandharpur, Sholapur District; Nateputa, Sholapur District; Akluj, Sholapur District: Shirwal, Poona District: Khed, Ratnagiri; Mahud, Sholapur District.

The Staff consists of 35 Europeans and 50 Indian workers, including hospital staff, with a community of about 200 Indian Christians and their families. The main work is evangelising in the villages, women's zenana work, and primary education. Medical work is conducted at most stations, with a hospital at Pandharpur. Mission Headquarters, 11, Phayre Road, Poona.

Secretary:—Rev. S. D. Davidson.

THE AMERICAN CHURCHES OF GOD MISSION—Has three missionaries at Bogra, two at Khanjanpur, Bogra District, Bengal and two at Ulubaria, Howrah District, Bengal.

President:—Rev. H. W. Cover, M.A., Bogra, E. B. Railway.

Secretary:—Miss Eunice Catlin, *Mission House.*—Khanjanpur, *Via* Jaypurhat, Bogra District.

THE CHURCH OF THE NAZARENE MISSION.—Has its headquarters for India at Buldana, Berar, where it has a Boys' Boarding School. In Chikhli, 14 miles from Buldana there is a Girls' Boarding School. At Basim, Berar, 85 miles from Buldana there is a Day School, a Bible Training School and a Women's and Children's Hospital. At present there are 11 missionaries in India and a force of 46 Indian Preachers, Teachers and Bible women.

Mission Chairman: Rev. John McKay, Basim, Berar, C.P.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION:—Has two missionaries in India. Rev. Arthur J. Calhoon, Th.B., and Mrs. Arthur J. Calhoon, R.N., Adra, B. N. Rly.

THE INDIAN MISSIONARY SOCIETY, TINNEVELEY (DORNAKAL AND THE HILL TRIBE MISSION)—Opened in 1903, operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Paliars in the British and Travancore Hills. It is the missionary effort of the Christians living in India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and overseas. There are now nearly 14,000 Telugu Christians in 154 villages and 550 Paliyar Christians in the hills. The Society publishes monthly *The Missionary Intelligencer* containing information about the Society's work in both the fields.

Secretary—Rev. D. D. Rajamani, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874. An interdenominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children, working in 20 countries but largely in India, Burma, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India and Burma alone the Mission now has 32 Asylums of its own with upwards of 7,200 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India and Burma over nearly 10,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases, both adults and children, are now benefiting.

Most of the Mission's income is derived from voluntary contributions. Some funds are raised in India and Burma but the bulk of the money expended by the Mission in India and Burma is received from Britain, although the provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers of which Lady Lumley, The Hon'ble Lady Hope, Lady Hubback and Lady Wylie are Vice-Presidents.

Hon. Treasurer:—William McIntyre, c/o Macneill & Co., 2, Fairlie Place, Calcutta.

Hon. Treasurer, Bombay: —R. C. Lowndes, c/o Messrs. Killick, Nixon & Co., Bombay.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 7, Bloomsbury Square, London, W. C. 1. The Secretary for India is Mr. A. Donald Miller, Purulia, Bihar.

THE REGIONS BEYOND MISSIONARY UNION.—An inter-denominational Society which commenced work at Motihari, Bihar, in 1900, and now occupies 7 stations and 9 out-stations in the Champaran and Saran Districts, with a staff of 30 European and 3 Indian Missionaries and 40 other Indian workers. The Mission maintains 2 Hospitals, 1 Girls' Orphanage, 1 Women's Home, 1 Boys' Orphanage and Boarding School with a Carpentry industrial department, and 1. M. E. School with 200 pupils. Communicants number 200.

Secretary:—Rev. Walter A. Corlett, Siwan, Saran, Bihar.

THE NATIONAL MISSIONARY SOCIETY OF INDIA.—Established 1905, started, financed and managed by Indian Christians; has a staff of 29 missionaries and 116 helpers and voluntary workers; operates in Montgomery District (the Punjab), Firozabad, (U.P.); Haluaghat, Mymensingh District (Bengal), Murwani (C.P.), N. Kanara, Mirajgaon (W. India), Parkal Taluk (Nizam's Doms.), and Tirupattur Taluk (N. Arcot). Direct evangelistic work from 50 centres in 8 language areas; Interdenominational; 34 Primary Schools, with two Hostels for boys and 1 one for Girls, 1 High School with hostel, 1 Printing Press. 3 dispensaries, 2 Hospitals and one Child Welfare Centre. Annual expenditure Rs. 58,600 excluding selfsupporting institutions, The *National Missionary Intelligencer*, (a monthly Journal in English sold at Re. 1 per year, post free), *Deepikai*, (a monthly journal in Tamil at 8 annas per year. Post free).

Address:—N. M. S. House, Royapettah Madras.

President:—The Rt. Rev. S. K. Tarafdar.

General Secretary:—M. John, M.A., Madras.

THE SEVENTH-DAY ADVENTIST MISSION.—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of 691 workers, European and Indian, including 165 ordained and licensed ministers. Evangelistic and educational work is conducted in sixteen vernaculars, beside work for English-speaking peoples in the large cities. For administrative purposes, there are five branch organisations located as follows:—

Seventh-day Adventist Mission—Western India. (Pastor F. E. Spiess, Superintendent.) *Office Address:* Salisbury Park, Poona.

Seventh-day Adventist Mission—Burma. (Pastor E. M. Meleen, Superintendent.) *Office Address:* 68, U Wisara Road, Rangoon, Burma.

Seventh-day Adventist Mission—Northeast India. (Pastor F. H. Loasby, Superintendent.) *Office Address:* "Baragain", Ranchi.

Seventh-day Adventist Mission—North-west India. (Pastor O. O. Mattison, Superintendent.) *Office Address:* Regal Buildings, New Delhi.

Seventh-day Adventist Mission—South India. (G. G. Lowry, Superintendent). *Office Address:* 9, Cunningham Road, Bangalore.

The general headquarters for India, Burma and Ceylon is located at Salisbury Park, Poona. N. C. Wilson, President; A. E. Nelson, Secretary and Treasurer. (Office Address: Post Box 15, Poona). On the same estate is an up-to-date publishing house devoted to the printing of health, temperance, evangelical and associated literature. (Address: Oriental Watchman Publishing House, Post Box 35, Poona).

A large number of day and boarding vernacular and Anglo-vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institution, and in many cases, to engage in some trades or other work.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Eight physicians, and a number of qualified nurses are employed, regular medical work being conducted at thirty-two stations.

The baptized membership (adult) is 7,042 organized into 141 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 400 Sabbath Schools are conducted with an enrolled membership of about 13,000.

The Bombay address is No. 15, Club Back Road, Byculla.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 35, Indian workers 140, Church members 1,446, children (unbaptized) 930, Industrial Training institutions 1, Academy including High School, Normal School and Bible School—Anglo-Hindi Middle School 2, Elementary Schools 11, Orphanages 2, Women's Home 1, Hospital 1, Dispensaries 7, Leper Home 1, Home for untainted children of Lepers 2, Leper Clinic 4, Farm Village projects 2.

Secretary: A. C. Brunk, Dhamtari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION—Started in 1901 in the C. Provinces. Workers number 22; Leper, Medical Orphan, Zenana, Evangelistic, Educational and industrial work carried on. *Secretary*: Rev. F. J. Isaac, Mauhadih, *via* Champa, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION.—Established 1890 in the C. P. and Berar, has a mission staff of 13; Indian workers 15; Churches 5; Communicants 586; Christian Community 560; 1 Elementary School.

Secretary.—Rev. Carl Wyder, Ellichpur, Berar, C. P.

THE CEYLON AND INDIA GENERAL MISSION.—Established 1892, occupies stations in Mysore State, in the Coimbatore and Anantapur Districts, also in the United Provinces. Mission staff 44; Indian workers 59; Churches 11; Communicants 1011; Christian community 2,979; Orphanages 4; Schools 4; Pupils 403.

Secretary, pro tem.—Rev. J. W. Dawson.

Headquarters.—"Mizpah," Richards Town, Bangalore.

THE BOYS' CHRISTIAN HOME MISSION.—Was founded by Rev. Albert Norton in 1899 during a time when a serious famine swept the land. The Headquarters of the Mission is Dhond.

At present the Mission staff consists of seven missionaries and 48 Indian workers. There are two elementary schools, one at Dhond, Poona District, and one at Orai, U. P. There is also a girls' School at Orai. The total strength of the schools is over 260. At Dhond there are two orphanages, one for boys and one for girls, and a small attempt is being made to start agricultural work, using improved methods.

The mission consists of two main stations, one at Dhond, Poona District, and another at Orai, United Provinces, with two out-stations in the U. P., one in Jalaun and the other in Kalpi.

The function of the mission is, chiefly, the care of orphan boys and girls and evangelistic work in neglected villages.

Director.—Rev. John E. Norton.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an inter-denominational society, with headquarters, 33, Surrey Street, London, working among women and girls in 5 stations in the Bombay Presidency, 7 in United Provinces, and 4 in the Punjab. There are 57 European Missionary ladies on the staff and 50 Assistant Missionaries, 202 Indian teachers and nurses and 31 Bible women. During 1938 there were 5,818 in-patients in the three hospitals supported by the Society (Nasik, Lucknow and Patna). There were 24,033 out-patients, 108,958 attendances at the Dispensaries. In their 21 Schools were 2,033 pupils and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,181 women were regularly taught. Total expenditure in India £35,075.

Hon. Treasurer: Rev. Roland A. Smith, M.A.

Hon. Finance Secretary: Rev. E. S. Carr, M.A.

President.—The Lady Kinnaird.

Secretaries.—Rev. H. S. Gregory, M.A., and Miss N. Lamport.

WOMEN'S CHRISTIAN MEDICAL COLLEGE with which is incorporated THE PUNJAB MEDICAL SCHOOL FOR WOMEN. In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influence to Indian women. Doctor Edith Brown, D.B.E., M.A., M.D., M.C.O.G., etc. was its Founder and Principal. The School is Inter-denominational, and trains students for various Missionary Societies.

The Memorial Hospital in connection with the College has 279 beds and 54 cots.

In 44 years 360 medical students qualified as Doctors, besides 160 Compounders, 233 Nurses and 970 Midwives and Nurse Dais. Nurses and Compounders also do midwifery and are included in this last figure.

There are in training at present 33 M.B.B.S. students, 133 Licentiates, 57 Nurses, 16 compounders, 2, Mother craft pupils and 104 Nurse Dais and Midwives, making a total of 327 women being trained, besides Indigenous Dais receiving instruction at the Health Centres run in connection with the Hospital. There are 3 City Centres, and 1 Village Dispensary.

During the year 1939 there were 4,571 In-Patients, and 63,519 Out-Patients.

The Radium and Deep X-Ray Therapy departments are meeting a great need, and show good progress, and the fight against Tuberculosis is increasing in intensity. Tuberculosis Clinics are held, and city visiting is done on a comprehensive scale, while patients are admitted to a Garden Sanatorium outside the Hospital.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in Kangri Collection, and conducts activities for women's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

work in the city. The Social Training Centre for women is now an integral part of the work of the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden :—O. M. Kaae, B.Sc. (London), Reynolds Road, Byculla, Bombay.

Warden:—E. A. Underwood, B. Sc., University Settlement, Sardar Modliar Road, Poona.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925), the well-known work of the late Pandita Ramabai, shelters about 700 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss Julia Woodward, *Acting Secretary and Treasurer*.

Inter-denominational Missions.

"THE CENTRAL ASIAN MISSION. Founded 1895. Head Office, 47, Victoria Street, London, S.W.1; base on the N. W. Frontier at Mardan; advance stations at Bandapur, Kargil, Shigar, Khapalu and Zangskar. Protestant, Evangelical inter-denominational. 14 European Missionaries. Field Secretary, Bandapur.

THE FRIENDS' SERVICE COUNCIL.—The Friends' Service Council works in five stations of the Hoshangabad District and in two stations in Central India.

The Church, which is composed of 6 Monthly Meetings united in the Mid-India Yearly Meeting, is largely organised on the lines of the Society of Friends in England.

There are 14 missionaries, 12 on the field and 2 on furlough, also 3 retired missionaries living in the district.

The principal activities are a general hospital with dispensary and nurses' training department, a Primary School and an Anglo-Vernacular Middle school at Itarsi; a Boarding school for girls with Primary and Anglo-Vernacular Middle Departments at Sohagpur; a Home for older girls in Sohagpur where toys are made for sale; a Boys' Hostel at Hoshangabad for boys attending Primary, Middle and High schools there. The Council's work also covers two villages in the Seoni Tahsil of the Hoshangabad district in one of which, Makoriya, there is a dispensary and a Primary School.

An Ashram is maintained near Hoshangabad, where village problems are studied, and work of an educational and social nature is carried on. Wardens, Ranjit and Doris Chetsingh.

There is also a Weavers' Colony at Khera, Itarsi, where cloth is made on hand-looms.

The Council has 185 members and 1,460 adherents. Mission Secretary: Miss M. Finch, Sohagpur, C.P.; Church Secretary: Dhan Singh, Sohagpur, C.P.

THE AMERICAN FRIENDS' MISSION.—With Missionaries working in Bundelkhand, Hospital for Women and Children at Chhatarpur, Boys' school at Harpalpur, Orphanage, evangelistic, industrial and school work at Nowgong.

Superintendent: Rev. Everett L. Cattell, Chhatarpur, C.I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is the only Hebrew Christian Agency in India. *Hon. Secretary*: Rev. G. F. Westcott, B.Sc., M.A., 11, Mission Row, Calcutta.

Lutheran Societies.

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA.—, founded 1842:—Commonly known as the United Lutheran Church Mission. Works in co-ordination with the Andhra Evangelical Lutheran Church, organized 1927. Foreign staff on the field, December 1940, 73; Indian Staff of all grades, 3,155; Schools, 892; Pupils, 46,809. The Mission conducts a first grade College (The Andhra Christian College, Guntur), three High Schools for Boys, two High Schools for Girls, one Normal Training School for Masters and one for Mistresses, a Theological College, three Theological Schools, an Agricultural School, three Industrial Schools, twenty-four Higher Elementary and Middle Schools, 852 Village Schools, seven Hospitals, a School for the Blind, a Tuberculosis Sanatorium and a Printing Press. THE ANDHRA EVANGELICAL LUTHERAN CHURCH has a baptised membership of 189,057, 1,869 congregations, 102 pastors, 622 evangelists and catechists.

President of the U. L. C. Mission :—Rev. M. L. Dolbeer, D. D., Rajahmundry.

President of the Andhra Evangelical Lutheran Church :—Rev. J. Russell Fink, D. D., Rentachintala.

Financial and Legal Agent :—Rev. I. Cannaday, D. D., *Joint Treasurer*, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN.—A Church of Sweden Society, founded in 1856, occupies the Districts of Saugor, Betul and Chhindwara in the Central Provinces.

There are about 3,000 Church members constituted into an indigenous Church called the Evangelical Lutheran Church of the Central Provinces. The European and Indian staff numbers 37 and 167 respectively. There is a training school for Indian workers and 24 Primary and Anglo-Vernacular Schools with 1,629 Children in attendance; 30 Sunday Schools with 634 Christian and 665 non-Christian attending; 6 Dispensaries with 36,643 patients during 1940. 3 Workshops. One Women's Industrial School; One Widows' Home with 70 women; 3 Orphanages, one Boys' Boarding School, and one Girls' Boarding School with 133 boys and 189 girls and 3 farms where modern village uplift is attempted.

Secretary—Rev. R. Asplund, Chhindwara, C. P.

THE BASEL EVANGELICAL MISSION (Incorporated in Switzerland), with its headquarters in Mangalore, South Kanara, was founded in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1834 and is at present carrying on the work in South Kanara, South Mahratta, Malabar and Coorg. It has at the beginning of 1941, 28 chief stations and 84 out-stations with a total missionary staff of 18 European and about 800 Indian workers. The membership of the churches is 28,000. Educational work embraces 100 schools, among which a Theological Seminary, a second grade college and 7 high schools. The total number of scholars is 18,000. Medical work is done at Betgeri-Gadag, Southern Mahratta Country, where a hospital for men and women and at Udipi, South Kanara, where a hospital for women and children is maintained. The Mission maintains a Home Industrial Department for women's work. There is also connected with the Mission a large Publishing Department with a Book Shop and a Printing Press, with about 150 workers, at Mangalore, S. Kanara, which is doing work in English and in a number of Indian languages.

President and Secretary:—Rev. A. Streckeisen, Calicut, Malabar.

THE FEDERATION OF EVANGELICAL LUTHERAN CHURCHES IN INDIA was established in 1926 as an outward expression of the spiritual unity of the Lutheran Churches in India. It consists of 9 constituent churches and 3 co-operating Missions in India with a total membership of over 450,000. The work of the Federation is carried on by the Triennial Conference of the Federation, by its Executive Council, by a number of standing and special Committees and by its office-bearers.

The office-bearers for 1939-41 are as follows:

President and Treasurer:—Rev. P. Paradesi, B.D., Luthergiri, Rajamundry.

Vice-President:—The Rt. Rev. Bishop J. Sandegren, D.D., L.N.O., Trichinopoly.

Secretary:—Prof. J. D. Asirvadan, M.A., L.T., Madras Christian College, Tambaram, S. I. Rly. Tel. Address: Krupalaya, Tambaram.

THE CHURCH OF SWEDEN MISSION was founded in 1874. It operates in the Trichinopoly, Coimbatore, Madura and Ramnad Districts. In conjunction with the Leipzig Evangelical Lutheran Mission (L.E.L.M.) it co-operates with the Tamil Evangelical Lutheran Church. The C. S. M. maintains a general and eye hospital at Tirupattur, an eye hospital at Coimbatore, High Schools for boys at Madura and Pudukotah, a High School for girls at Tanjore and various Primary Schools. European staff 45; School Teaching staff 171; Schools 28; Pupils: boys 2,698 and girls 1,184.

Ag. President:—Rev. B. Fr. Tiliander, B.A., B.D., Pudukotah.

LEIPZIG EVANGELICAL LUTHERN MISSION.—The Lutheran Mission work in India was commenced in 1706 by German Missionaries under the Danish Tranquebar Mission. It was taken up by the L.E.L.M. (founded in 1836) in 1841. The L.E.L.M. re-entered into the work after the great war in 1927. It is located in the Madras, Chingleput, South Arcot and Tanjore Districts. The Mission co-operates with the Church of Sweden Mission and the Tamil Evangelical Lutheran Church. The L.E.L.M. maintains two High Schools for boys at Madras and Shiyali (Tanjore Dt.), a number of Elementary Schools for boys and girls in different places, and various other institutions.

Owing to the war, the whole Mission work has been temporarily placed under the Mission-Council of the Church of Sweden Mission.

TAMIL EVANGELICAL LUTHERAN CHURCH.—Organised Churches 49; Ordained Indian Ministers 16; other Indian workers 96; Baptised membership 38,328; Schools 231; Teaching staff 700; Pupils: 13,637 boys and 4,705 girls.

President:—Rt. Rev. J. Sandegren, M.A., D.D., L.N.O., Bishop of Tranquebar, Trichinopoly.

MISSOURI EVANGELICAL LUTHERAN INDIA MISSION (M.E.L.I.M.). Located in British India, Mysore and Travancore.

In British India, in North Arcot (Ambur, Vaniyambadi, Pernambut), Salem (Krishnagiri, Bargur), Tanjore, Trichinopoly, Madura, Ramnad, Tinnevelley (Vallioor, Vadakangulam) Districts.

In Mysore (Kolar Gold Fields).

In Travancore (Nagercoil, Trivandrum, Parasala, Balaramapuram, Aryanad, Nilamel, Alleppey and Shertalay).

There are 50 American Missionaries. Of this number 5 are on furlough; 2 are teachers in charge of school and home for children of missionaries (Kodaikanal), 1 is a male Doctor, 2 are Zenana workers (female), 1 nurse (female), and 1 educational worker (female).

There are 3 High Schools, 1 Teachers' Training Institution, 2 Catechist Training Institutions, 1 Theological Seminary, and 1 hospital with 20 beds.

Statistics, November 1, 1940. Christians 14,338; Indian Pastors 9; Evangelists 15; Catechists 164; M. E. L. I. M. teachers 151; other teachers 31. Boarding houses 10.

General Secretary:—The Rev. Robert M. Zorn, S. T. M., Nagercoil, Travancore, South India.

THE DANISH MISSIONARY SOCIETY, established 1864 in South Arcot, working there and in North Arcot, on the Shervaroi Hills, in Madras and in Orissa. Has a total staff of 341 Indian and 39 European Workers. Communicants 4,026 Christian Community 8,364, one High School, one Secondary school, three Boarding Schools, three Industrial Schools, one hostel, 74 Elementary Schools, and two Hospitals; total scholars 5,860.

President.—The Rev. P. Lange, Trivunnamalai.

Treasurer.—The Rev. K. Heiberg, 38, Broadway, G. T., Madras.

The Santal Mission of the Northern Churches (formerly known as the Indian Home Mission to the Santals).—Founded in 1867, works in the Santal Parganas, Birbhum, Murshidabad, Malda, Rajshahi, Dinajpur and Goalpara. Work is principally among the Santals but also among Bengalis and the Mech people (Boro).

Mission staff numbers 38 of whom 2 medical missionaries. Indian pastors 42, other Indian workers 500, Christian community in organised congregations 26,000. 6 boarding schools with 900 pupils, 130 elementary schools with 2,300 pupils, 1 industrial school with 60 pupils, 1 printing press, 1 orphanage with 30 orphans, 2 hospitals, 4 dispensaries, 2 leper colonies with 400 lepers, 1 tea garden. *Acting Secretary*: Rev. J. Gausdal, Dumka, Santal Parganas.

Methodist Church.

The Free Methodist Mission of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 13 Missionaries and 40 Indian workers. Organised churches 7, 1 Theological School, 1 Anglo-Vernacular Middle School, 5 Elementary Schools, 1 Dispensary and 5 centres for Clinical and village health work.

Secretary.—Miss E. E. Ward, Digras, Berar.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander; and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Territory, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced). A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Agricultural Colonies Soldiers, and Civilians Hostel, Delhi.

Village centres at which the S. A.	
Works	2,109
Officers and Employees	618
Social Institutions	5

Territorial Headquarters—Ferozepur Road, Lahore, Punjab.

Territorial Commander—Colonel W. D. Pennick.

Western Territory.—The Western Territory comprises Bombay, Gujarat, Panch Mahals and the Maharastra.

Territorial Headquarters—The Salvation Army, Morland Road, Byculla, Bombay.

Territorial Commander—Lt.-Commissioner H. B. Colledge (Prakram Singh).

Corps. 302; Outposts 533; Societies 507; Social Institutions 16.

Besides the distinctly evangelistic operations there are established a large General Hospital—Emery Memorial, Anand—Ahmednagar Hospital, Kaira Dispensary and several Dispensaries; 226 Day Schools; 4 Boarding Schools; a Home for Juvenile Criminals; Industrial and Rescue Home for Women; conditionally Released Prisoners' Home; the management of the King George Vth Memorial Infirmary, and Lady Dhunbai Home for the Destitute; Weaving Schools, Factory for the making of Weaving, Warping and Reeling Machines, and a Land Colony having a population of 343 Salvationists.

Madras and Telugu Territory.—This Territory comprises the city of Madras and the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency.

There are the following agencies at work, where evangelical, educational and social work is systematically done:— 371 Corps and Outposts; 130 village primary Schools; 1 Criminal Tribes Settlement; 2 institutions for the training of Officers; 1 Leper Colony at Bapatla with 275 inmates; 1 Hospital for women and children at Nidrobrullu, Guntur District; a women's Industrial Home in Madras; a Boarding School for girls at Nellore, and another for boys at Bapatla of the Salvation Army.

Territorial Headquarters:—The Salvation Army, Broadway, Madras. G.P.O. Box 206.

Chief Secretary-in-Charge:—Brigadier Edward Walker.

General Secretary:—Major Victor Thompson.

Southern India Territory.—The Territorial Headquarters is Trivandrum, Travancore State.

The work of The Army had its beginning among the Tamil-speaking people of the southern part of the State nearly fifty years ago. The work developed and extended northward through the whole State of Travancore into Cochin, and during the past twenty-five years eastward into the British administered districts of the southern part of the Madras Presidency.

More than 500 corps and over 1,000 officers labour amongst the village populations. The Army has a membership today in this part of India of more than 75,000. Hundreds of Salvation Army Halls have been erected in which gather Sunday after Sunday congregations of Christian men and women, converts from among those who have been the most depressed people in the country, now of the third, second and first generations.

This territory is divided for administrative purposes into fourteen divisions, four among the Tamil-speaking people and ten amongst those who speak Malayalam.

Medical work, also the work of our Leper Hospitals take care of a vast amount of human suffering. The Catherine Booth Hospital at Nagercoil, which has grown out of a very small beginning, is now a fully equipped, modern institution of many departments, dealing with all manner of medical and surgical cases. The Hospital is equipped with X-Ray, radium, iron lung and splendid nursing facilities. Branches from this Institution carry the service of the Hospital to some of the most remote regions, dealing, among other things, with malaria which has ravaged and undermined the health of a whole population in certain areas in South Travancore.

194,703 Patients were dealt with in the main Hospital and its branches during the past year and no less than 9,495 major and minor operations were performed. Two Leper Hospitals, one run on behalf of the Cochin Government and the other the Evangeline Booth Leper Hospital in North Travancore, carry on the work ranking with the highest traditions of Christian service.

Workers in this territory consist of 1,201 officers and 246 employees, who manage 497 Corps, 864 outposts and Societies, 190 Schools, 16 hospitals and 11 Institutions.

Territorial Headquarters—S. A. Kuravankonam, Trivandrum, Travancore State.

Territorial Commander—Lieut.-Commissioner Chas. F. A. Mackenzie.

Chief Secretary—Lieut.-Colonel A. J. Hedén.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated.

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law-Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Tranfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in British India.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee were to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it was suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended; cannot be said to have diminished the privileges of European British subjects charged

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans..... Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code. Since 1836 no distinction of race has been recognised in the civil courts throughout India.

The Federal Court.

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act 1935 accordingly provides (sections 200-218) that there shall be a Federal Court consisting of a Chief Justice of India and such number of other judges as His Majesty may deem necessary; but the number of puisne judges shall not exceed six, unless and until an address is submitted by the Federal Legislature for an increase. Every judge of the Federal Court is to be appointed by His Majesty by warrant under the Royal Sign Manual. He shall hold office until he attains the age of 65 years, but is liable to be removed from office on the ground of misbehaviour or of bodily or mental infirmity, provided that the Judicial Committee of the Privy Council on a reference reports that the judge ought on any such ground to be removed. The Federal Court shall be a Court of Record, and shall sit at Delhi or such other place or places as the Chief Justice may with the approval of the Governor-General from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Federation, any of the Provinces, or any of the Federated States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends. Certain restrictions are placed upon the Court's jurisdiction over disputes to which a state is a party. In the exercise of its original jurisdiction the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment decree or final order of a High Court in British India, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act, or any Order in Council made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave. The Federal Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court so as to extend to certain civil cases involving large stakes. An appeal also lies to the Federal Court from a High Court in a Federated State on the ground that a question of law has been wrongly decided concerning the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of the Instrument of Accession of the State or arising under Agreement made under Part VI of the Act in relation to the administration in the State of a law of the Federal Legislature.

An appeal may be brought to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of an Instrument of Accession, or under an agreement made under Part VI of the Act. An appeal may also be brought to the Privy Council where special leave is granted either by the Federal Court or the Privy Council. All authorities, civil and judicial, throughout the Federation are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court shall be in the English language, and judgment must be pronounced in open court in accordance with the opinion of the majority of the judges.

The Federal Court was established and commenced to function from 1st October 1937. The Court in the first instance consists of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000, and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C., was appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. R. Jayakar to be judges of the Federal Court.

The functions of the Federal Court are not to be affected in any way by the assumption of emergency powers by the Governor-General under section 45 of the Act in case of failure of the Constitutional machinery.

High Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in India or lawyers qualified in India. This fixed proportion of Barrister and Civilian judges has now been abolished by Government of India Act 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N. W. F. Province and the Central Provinces and Berar the principal legal tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar and Sindh; and a High Court has since January 1936 been established at Nagpur.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Jsutices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Smali Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Courts, Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtiars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Indian Councils Act of 1926 aims at abolishing the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council. Under the Government of India Act 1935 it is proposed to appoint an Advocate-General for each of the more important provinces, and an Advocate-General of the Federal Court is also appointed, and he will be the principal law-officer of the Federal Government.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Province.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which have its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned and is not now subject to the general control of the Governor-General. The Police in minor provinces, *viz.*, Coorg, Delhi, Ajmer-Merwara, Andaman and Nicobar Islands, and Panth Piploda, and in other centrally administered areas is administered by the Chief Commissioner or the head of the administration concerned, subject to the general control and direction of the Central Government.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of public tranquillity, but the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police and Inspector-General of Police. Generally speaking, the D.S.P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C.I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux. There is also a **Central Intelligence Bureau** under the Home Department of the Government of India which collects information from all provincial Criminal Investigation Departments and works for inter-provincial liaison. It has its branches at various centres throughout British India and at Quetta in Baluchistan. The Head of the Bureau known as the Director, Intelligence Bureau, also acts as Advisor to the Home Department of the Central Government in police matters.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with ·410 bore muskets. At most headquarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such cases the Thanadar, who

Digitized by Arya Samaj Foundation Chennai and eGangotri

like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is a police officer. Personal inspection and supervision are the common means for the District Superintendent of Police to know whether his subordinates are doing their work properly.

Out-Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—A constable may aspire to become a Police Station Officer or higher officer. The directly recruited candidate who comes in through the Police Training School as a Thanadar is, it is understood, more often than not a graduate and may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D.I.G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund. Members of the Police Force are eligible for the award of the King's Police Medal and the Indian Police Medal for long and meritorious services and for conspicuous acts of gallantry.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, *i.e.*, without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasised in orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable and non-cognizable crime:—

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

Since the introduction with effect from the 1st April 1937 of the Government of India Act, the administration of "Jails" is a provincial matter, and the power of legislation in respect of prison administration vests in the Provincial Governments, the Central Government exercising only concurrent legislative powers with the Provincial Governments in the matter of the transfer of prisoners and accused persons from one unit to another.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organisation and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the headquarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour.

The Jails Committee.—The obvious advisability of proceeding along certain general lines of uniform application led to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents: and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners for employment as convict officers.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline. These are but general principles which have been variously given effect to by various Provincial Governments.

The question of the treatment of "young adult" prisoners has in recent years received much attention.

Children's Acts and Borstal Schools Acts for the special treatment of juvenile offenders have been passed by several Provincial Legislatures.

The Madras Children Act, passed in 1920, is the earliest and has been largely followed in the other provinces. It classifies as "children" boys and girls under the age of 14 and as "young persons" those between the ages of 14 and 16. It enacts that a child or young person convicted of any offence, may as an alternative to the usual punishments of fine, whipping or imprisonment be discharged after due admonition, committed to the care of a parent, guardian or relative, or of a person named by the court, or sent to an Industrial School set up or certified under the Act. It further enacts that no offender under the age of 16 may be sentenced to transportation, nor under 14 to imprisonment. Offenders between the ages of 14 and 16 may be sentenced to imprisonment in very special circumstances. Provision is made for the committal to an Industrial School or to the care of a suitable person of neglected, ill-treated or uncontrollable children under the age of 14. The Act empowers the Government of the Province to establish juvenile courts consisting of a stipendiary magistrate and one or two Honorary Magistrates who shall, where possible, be women and directs that, where such courts have not been established, young offenders shall be tried in a different room or at a different time from those at which the ordinary sittings are held.

The Bengal Act provides for the committal to an Industrial School of children under 14 found begging or destitute and of children living in immoral surroundings. It further provides for the punishment of cruelty to children, of causing and abetting the seduction or prostitution of girls under 16, and of accepting articles in pawn from a child.

The Bombay and Central Provinces Acts, which are practically identical, go further and provide for the punishment of persons found drunk in a public place when in charge of a child under 7, or giving intoxicating liquor or drugs to a child under 14, or inciting a child to gamble. They also empower police officers to confiscate tobacco in possession of children.

The Bombay Act has been extended throughout the province with satisfactory results and it will not now be necessary to send any children to prison except in very exceptional cases.

There are several certified schools established under the Bombay Act and there are a number of other institutions which co-operate with different juvenile courts. A Children's Aid Society is in existence which offers active co-operation. The Bombay Children Act has been amended mainly to prohibit the publication of names, addresses or other details of children or young persons involved in offences; to provide for a system of true probation as distinct from supervision; to empower the Chief Inspector of Certified Schools to release youthful offenders on license and to raise the minimum term of detention in the Borstal School from 2 to 3 years.

These provisions of the Bombay Act which relate to youthful offenders, the maintenance and treatment of persons sent to certified schools or committed to the care of relatives or other fit persons and the establishment of industrial schools and juvenile courts were applied to the province of Sind in March, 1936.

The operation of the Bengal Act which was passed in 1922 is at present confined to the town, port and suburbs of Calcutta, Howrah and to certain portions of the District of the 24-Parganas. A Central Children Court has been established in Calcutta, which has jurisdiction over the whole area to which the Act has been extended.

The Governments of Madras, Punjab and the Central Provinces have also enacted Probation of Offenders Act which allow of the release of young offenders on parole under specially selected Probation Officers. Similar legislation is under contemplation in Bombay, U.P. and Assam.

The provisions of the Borstal Schools Act are practically the same in the provinces where such Acts have been enacted.

In provinces where there is no Borstal Schools Act juvenile offenders are sent to the reformatory schools established under the Reformatory Schools Act, or confined in juvenile or ordinary jails, but are not allowed to mix with adult prisoners. In the Punjab a Reclamation Department has been established the main function of which is the working of the Punjab Good Conduct Prisoners Probational Release Act, 1926. Officers of the Department visit jails for the selection of prisoners on probation release. The probationers are usually sent to special farms.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release, to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

Laws of 1940

BY

RATANLAL RANCHHODDAS, B.A., LL.B., *Advocate, High Court. Editor, The Bombay Law Reporter.*

AND

MANHAR R. VAKIL, *Bar-at-Law, Asst. Editor, The Bombay Law Reporter.*

1. The Registration (Emergency Powers) Act.—The Registration Ordinance II of 1939 made on August 30, 1939, which provided for the compulsory registration of European British subjects of military age in India expired at the end of February, 1940. The registration was completed but as it was necessary to carry on the provisions enabling registration in order to embody in the register particulars of new arrivals in India and changes of address, the present Act was passed which reproduces the provisions of the Ordinance *mutatis mutandis*.

The Act extends to the whole of British India and applies also to British Indian subjects in any part of India. It remains in force during the continuance of the present war and for a period of six months after (s. 1). A " European British subject " is defined as any subject of His Majesty of European descent in the male line, born, naturalised or domiciled in the British Islands or in any Dominion or in any Colony except Ceylon (s. 2). Under s. 3 every male European British subject for the time being in India—not being a member of His Majesty's naval, military or air forces, or a person who is enrolled under the Auxiliary Force Act, 1920, or is in holy orders, or is a regular minister of any religious denomination—who has attained the age of sixteen years but has not attained the age of fifty years—must within a prescribed period correctly fill up, sign and lodge with the specified registration authority a form of particulars set out in the Second Schedule to the Act. The registration authority is also empowered under the section to require, by order in writing, any person to furnish such particulars as may be specified in the order, whether or not such person is a European British subject. The penalty prescribed for non-compliance with the above provisions is a fine up to Rs.500. The Act is not applicable to any person confined for the time being in a prison or lunatic asylum (s. 6).

2. The Foreigners Act.—The Foreigners Ordinance, 1939, provided for the imposition of restrictions on the entry of foreigners into British India, their presence therein and their departure therefrom. The present Act repeals the Ordinance and incorporates all its provisions.

The Act remains in force during the continuance of the war and for a period of six months after (s. 1). " Foreigner " under the Act has the meaning assigned to it in the Foreigners Act, 1864, but it does not include any ruler or subject of any Indian State or any native of the tribal areas (s. 2). S. 3 provides for the control of the entry into, departure from and residence, movements and conduct in, British India of foreigners. Among other things the Central Government is empowered to make orders providing that the foreigner shall comply with certain specified conditions, *e.g.*, requiring him to allow his photograph and finger impressions to be taken and to furnish specimens of his hand-writing and signature to a specified authority; prohibiting him from association with persons of a prescribed description or prohibiting him from using or possessing prescribed articles. S. 5 prohibits foreigners changing the names under which they were registered on the outbreak of war. For the purposes of the section the expression " name " includes a surname and a name will be deemed to be changed if the spelling thereof is altered but nothing in the section will apply to the assumption of any name in pursuance of a Royal license or by any married woman, of her husband's name. S. 6 empowers any District Magistrate and any Commissioner of Police to enter any vessel or aircraft at any port or place in British India and direct the master of the vessel or the pilot of the aircraft to furnish a list in writing of the passengers on board with certain other particulars. Under s. 7 the *onus* of proving whether a person is not a foreigner lies upon such a person notwithstanding anything contained in the Indian Evidence Act, 1872. Under s.12; if any person contravenes the provisions of the Act, he is punishable with imprisonment for a term which may extend to five years and a fine.

3. The Royal Indian Navy (Extension of Service) Act.—In view of the present emergency this Act secures that all classes of men now serving in the Royal Indian Navy, whose terms of service may have expired after September 2, 1939, or may expire during the period of hostilities, may be required, if necessary, to serve after the expiration of their current engagements. Under s. 2 until such date as may be notified by the Central Government as the date of termination of the present hostilities, any person enrolled for service in the Royal Indian Navy who, by reason of expiry of the term for which he engaged to serve when so enrolled, is no longer liable for service shall, notwithstanding such expiry, continue to be enrolled for service and to be liable for service in the Royal Indian Navy until he is discharged by order of the Officer Commanding the Royal Indian Navy. The period for which the service of any such person is so extended must not exceed five years from the day on which his service would otherwise have terminated.

4. The Offences on Ships and Aircraft Act.—The Indian Aircraft (Amendment) Act, 1939, was enacted to enforce compliance with certain regulations, framed to meet India's extra-territorial obligations arising out of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

International Convention of 1919, by all aircraft registered in India, wherever they may happen to be. As the law stood before the passing of this Act, offences committed outside British India by foreigners and by British subjects other than Indian British subjects outside India on aircraft registered in British Indian could not be dealt with in British Indian Courts. This Act amends the criminal law (s. 4, Indian Penal Code, and s. 188, Criminal Procedure Code) so as to extend its operation to offences committed by such persons on aircraft registered in British India wherever it may be. A similar amendment in the law so far as offences on ships registered in India are concerned is also made.

5. The Trade Marks Act.—This Act which is based on the United Kingdom Trade Marks Act, 1938, provides for the registration and more effective protection of trade marks.

Section 2 defines certain words used in the Act. "Certification trade mark" means a mark adapted in relation to any goods to distinguish in the course of trade goods certified by any person in respect of origin, material, mode of manufacture, quality, accuracy or other characteristic, from goods not so certified and registrable as such under the Act in respect of those goods in the name, as proprietor of the certification trade mark, of that person; "mark" includes a device, brand, heading, label, ticket, name, signature, word, letter or numeral or any combination thereof; "trade marks" means a mark used or proposed to be used in relation to goods for the purpose of indicating or so as to indicate a connection in the course of trade between the goods and some person having the right, either as proprietor or as registered user, to use the mark whether with or without any indication of the identity of that person and "transmission" means transmission by operation of law, devolution on the personal representative of a deceased person and any other mode of transfers, not being assignment. The provisions of this Act are in addition to and not in derogation of the provisions of any other law for the time being in force (s.3).

Sections 4 to 13 deal with the register and conditions for registration. S. 4 provides for the establishment at the Patent Office a Trade Mark Registry and the maintenance thereof a record called the Register of Trade Marks. This register will be kept under the control and management of the Controller of Patents and Designs, who, for the purposes of the Act, will be called the Registrar of Trade Marks. The register will at all convenient places be open to inspection of the public. Under s.5 a trade mark may be registered only in respect of particular goods or classes of goods. S. 7 lays down the conditions on which a trade mark will be entitled to registration under the Act. A trade mark will not be registered unless it contains at least one of the following essential particulars, namely:—(*a*) the name of a company, individual, or firm, represented in a special or particular manner; (*b*) the signature of the applicant for registration or some predecessor in his business; (*c*) one or more invented words; (*d*) one or more words having no direct reference to the character or quality of the goods, and not being, according to its ordinary signification, a geographical name or surname or the name of a sect, caste or tribe in India; (*e*) any other distinctive mark, provided that a name, signature, or any word, other than such as fall within descriptions in the above clauses will not be registrable except upon evidence of its distinctiveness. In the case of a trade mark which has been continuously used, either by the applicant for registration or by some predecessor in his business, in relation to the same goods as those in relation to which registration is applied for, during a period from a date prior to February 25, 1937, to the date of application for registration, the Registrar cannot refuse registration by reason only of the fact that the trade mark is not adapted to distinguish as above, and he may accept evidence of acquired distinctiveness as entitling the trade mark to registration. Under s. 7 a trade mark may be limited wholly or in part to one or more specified colours. A trade mark which is registered without limitation of colour will be deemed to be registered for all colours. S. 8 prohibits the registration of a trade mark which contains any scandalous design or any matter the use of which would by reason of its being likely to deceive or to cause confusion or otherwise, be disentitled to protection in a Court of Justice; or be likely to hurt the religious susceptibilities of any class of His Majesty's subjects; or be contrary to any law for the time being in force or to morality. Under s. 9 no word which is the commonly used and accepted name of any single chemical element or single chemical compound (as distinguished from a mixture) can be registered as a trade mark in respect of a chemical substance or preparation. A word which is used to denote only a brand or make of the element or compound as made by the proprietor of the trade mark, as distinguished from the element or compound as made by others and in association with a suitable name or description open to the public use, may however be registered. S. 10 prohibits the registration of a trade mark in respect of any goods which is identical with a trade mark belonging to a different proprietor and already on the register in respect of the same goods or which so nearly resembles such trade mark as to be likely to deceive or cause confusion. In the case of honest concurrent use or other special circumstances which, in the opinion of the Registrar, make it proper so to do he may permit the registration by more than one proprietor of trade marks which are identical or nearly resemble each other in respect of the same goods subject to such conditions and limitations as the Registrar may think fit to impose. S. 11 deals with the registration of parts of trade marks and the registration as a series in one registration of marks which resemble each other in material respects and s. 12 defines the circumstances in which trade marks may be entered in the register as associated trade marks. S. 13 prevents the creation of a monopoly in non-distinctive parts of a registered trade mark.

Sections 14 to 19 deal with the procedure for, and duration of, registration. The procedure for the registration of trade marks is laid down in ss. 14-16. The application has to be made to the Registrar in writing and the latter may refuse it or accept wholly or conditionally. In the case of a refusal or conditional accep-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tance the Registrar, must, if required by the applicant, state in writing the grounds of his decision and the materials used by him in arriving thereat (s. 14). When an application for registration of a trade mark has been accepted the Registrar must soon after the acceptance cause the application to be advertised in the prescribed manner. Any person may, within the prescribed time from the date of the advertisement of an application, give notice in writing to the Registrar of opposition to the registration. The Registrar must serve a copy of such notice on the applicant and the latter must within the prescribed time send to the Registrar a counter-statement of the grounds on which he relies for his application, and if he does not do so he will be deemed to have abandoned his application. The Registrar after hearing the parties, if so required, and considering the evidence must decide whether registration is to be permitted (s. 15). The trade mark, when registered, must be registered as of the date of the making of the application and that date will be deemed to be the date of registration. On the registration of the trade mark the Registrar must issue to the applicant a certificate in the prescribed form of the registration thereof sealed with the seal of the Patent Office. Where registration of a trade mark is not completed within twelve months from the date of the application by reason of default on the part of the applicant, the Registrar may treat the applications as abandoned (s. 16). Under s. 16 where the relations between two or more persons interested in a trade mark are such that no one of them is entitled as between himself and the other or others of them to use it except (*a*) on behalf of both or all of them, or (*b*) in relation to an article with which both or all of them are connected in the course of trade, those persons may be registered as joint proprietors of the trade mark. Save as provided above the Act does not authorise the registration of two or more persons who use a trade mark independently, or propose so to use it, as joint owners thereof. The registration of a trade mark, under s. 18, will be for a period of seven years, and it can be renewed for a period of fifteen years from the date of the expiration of the original registration or of the last renewal of registration. S. 19 deals with the effect of removal from the register of a trade mark for failure to pay the fee for removal.

Sections 20 to 27 deal with the effect of registration. A person is not entitled to institute any action for infringement of an unregistered trade mark unless such trade mark has been continuously in use since before February 25, 1937, by such person and unless an application for its registration, made within five years from the commencement of this Act, has been refused. The rights of action against any person for passing off goods as the goods of another person are, however, not affected (s.20). S. 22 defines the circumstances in which no infringement of trade mark takes place. In all legal proceedings relating to a registered trade mark, the fact that a person is registered as a proprietor thereof will be *prima facie* evidence of the validity of the original registration of the trade mark (s. 23. Under s. 24 the original registration of a trade mark will after the expiration of seven years from the date of such original registration be taken to be valid in all respects. The proprietor of a registered trade mark cannot interfere with the use by any person of a trade mark identical with it in relation to goods in relation to which that person has continuously used that trade mark from a date prior to the use of the first mentioned trade mark or to the registration of the first-mentioned trade mark (s. 25). No registration of a trade mark will interfere with any *bona fide* use by a person of his own name or that of his place of business or the use of any *bona fide* description of the character or quality of his goods (s. 26). S. 27 is designed to safeguard the legitimate interests of expatentees and others without permitting the creation of an exclusive monopoly in words which the trade mark contains or of which it consists as the name or description of an article or substance.

Sections 28 to 35 deal with assignment and transmission of trade marks. S. 28 empowers a registered proprietor of a trade mark to assign the mark to another person and to give receipts for any consideration for such assignment. A registered trade mark will be assignable and transmissible whether in connection with the goodwill of a business or not and in respect either of all of the goods in respect of which it is registered or some only of those goods (s. 29). S. 30 provides for the assignment or transmission under certain conditions of unregistered trade marks used in connection with a registered trade mark. Under s. 31 a trade mark will not be assignable or transmissible in a case in which as a result of the assignment or transmission there would in the circumstances subsist exclusive rights in more than one of the persons concerned to the use, in relation to the same goods or description of goods, of trade marks nearly resembling each other or of identical trade marks if the use of the trade marks would be likely to deceive. S. 32 prohibits assignments and transmissions to more than one person of the same or resembling marks in respect of the same goods in separate parts of British India unless the Registrar is satisfied that the use of the marks in exercise of those rights would not be contrary to public interest. S. 33 empowers the Registrar, in cases of assignment otherwise than in connection with the goodwill of a business to direct the assignee to advertise the assignment. A certification trade mark will not be assignable or transmissible without the consent of the Central Government and associated trade marks are assignable and transmissible only as a whole and not separately (s. 34). S. 35 prescribes the procedure for the registration of the title of a person to the assignments and transmissions of registered trade marks.

Sections 36 to 45 deal with the use of trade marks and registered users. S. 36 enables trade mark owners to register their marks for use by a company which is about to be formed. S. 37 provides for the removal of trade marks from the register on the ground either that the trade mark was registered without any *bona fide* intention on the part of the proprietor that it should be used by him and that there has in fact been no *bona fide* use of the trade mark; or that a continuous

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

period of five years or longer elapsed during which the trade mark was registered and during which there was no *bona fide* use thereof. In the case of non-use, for a period of five years or longer, of the trade mark in relation to goods to be sold in a particular place in British India or in relation to goods to be exported to a particular market outside British India, limitations may be imposed on the registration of such trade mark. Where a trade mark consisting of any invented word has become so well known as respects any goods in relation to which it is registered and has been used and the use thereof in relation to other goods would be likely to be taken as indicating a connection between those goods and the person entitled to use the trade mark in relation to the first-mentioned goods, the trade mark may, on application by the proprietor, be registered in his name in respect of those other goods as a defensive trade mark (s. 38). Under s. 39 a person other than the proprietor of a trade mark may be registered as a registered user thereof in respect of all or any of the goods in respect of which it is registered. The permitted use of a trade mark will be deemed to be used by the proprietor thereof and not by a person other than the proprietor. S. 40 empowers a registered user of a trade mark to institute proceedings for infringement if the proprietor thereof refuses or neglects to do so. S. 41 lays down the procedure for the registration of the registered user of a trade mark. An application for registration as registered user will be refused by the Registrar if it appears to him that the grant thereof would tend to facilitate trafficking in a trade mark. S. 42 defines the power of the Registrar in the matter of cancellation of registration or the variation of the conditions on which a person is allowed as a registered user. A registered user has no right of assignment or transmission of a trade mark (s. 43). Under s. 44 the use of one of associated or substantially identical trade marks is equivalent to the use of a registered trade mark required to be proved for any purpose under the Act. S. 45 permits the use of a trade mark registered in India in relation to goods for export from British India and protects the use of a trade mark when the user's form of trade connection changes.

Sections 46 to 49 deal with rectification and correction of the register. S. 46 empowers the Registrar or a High Court to cancel or vary the registration of a trade mark under certain circumstances; *e.g.*, on the ground of any contravention of or failure to observe a condition entered on the register in relation thereto. The Registrar may, under s. 47, at the request of the registered proprietor of a trade mark, make necessary corrections in the register. S. 48 empowers the Registrar to add to or alter a registered trade mark, at the request of the proprietor thereof, in any manner not substantially affecting its identity. S. 49 provides that no amendment is to be made in the register which may have the effect of adding any goods or classes of goods to those in respect of which a trade mark is registered or of antedating the registration of a trade mark in respect of any goods. Such an amendment is however permitted where the Registrar is satisfied that the addition or antedating would not affect any substantial quantity of goods and would not substantially prejudice the rights of any person.

Section 50 to 61 deal with certification trade marks. S. 51 provides that a certification trade mark will not be registered in the name of a person who carries on a trade in goods of the kind certified. S. 52 provides the criterion in determining whether a mark is a certification trade mark or not. S. 53 embodies provisions for consideration of an application for the registration of a mark as a certification trade mark by the Registrar and s. 54 provides for consideration of the application by the Central Government after permission to proceed with it has been accorded by the Registrar under s. 53. S. 55 lays down the procedure to be followed after an application for the registration of a mark as certification trade mark has been accepted by the Central Government. S. 56 requires the deposit at the Patent Office of regulations approved by the Central Government for governing the use of each certification trade mark which is registered. The regulations so deposited will be open to inspection in like manner as the register. Ss. 57 and 58 define the rights conferred on an owner of a certification trade mark by registration and lay down the conditions and limitations in which there will be no infringement of a certification trade mark. Under s. 59 the Central Government is empowered on the report of any aggrieved person or on the recommendation of the Registrar to expunge or vary any entry in the register relating to a certification trade mark or for varying the deposited regulations on certain specified grounds.

Sections 62 to 66 deal with special provisions for textile goods. Under s. 62 the Central Government is empowered to specify the classes of textile goods to which the provisions on the subject will be applicable. S. 63 provides for the establishment at Bombay of a Branch of the Trade Mark Registry in charge of an officer called the Deputy Registrar; the maintenance at this branch of a record called the Textile Marks Record containing copies of all entries in the register relating to trade marks registered in respect of textile goods and open to the inspection of the public and a list called the Refused Textile Marks List containing a list of trade marks in respect of textile goods of which registration has been refused. S. 64 prescribes the restrictions imposed on the classes of marks which could be registered in respect of textile goods. S. 65 lays down the procedure for registration of textile goods. Applications for registration may be made either to the Registrar or the Deputy Registrar. By s. 66 the Central Government is empowered to constitute one or more Advisory Committees of persons versed in the usages of the textile trade and the Registrar or Deputy Registrar must consult any such committee with respect to any circumstances peculiar to the textile trade arising on an application to register a trade mark in respect of textile goods.

Sections 67 to 69 deal with offences and restraint of use of Royal Arms and State emblems. Under s. 67 the penalty prescribed for falsification of entries in the register is imprisonment for a term extending to two years or a fine or both. The penalty for falsely representing a trade mark as registered mark is imprisonment extending to six months or a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

aggrieved may move a Court to restrain by injunction a person from using without due authority the Royal Arms and State emblems.

Sections 70 to 85 deal with miscellaneous provisions. S. 70 lays down the procedure in respect of the proceedings under the Act before the Registrar, who will have all the powers of a Civil Court for the purposes specified. Under s. 73 suits for infringement of a trade mark or relating to any right in a trade mark must be instituted before a District Court. Under s. 75 a printed or written copy of any entry in the register, purporting to be certified by the Registrar and sealed with the seal of the Patent Office, will be admitted in evidence in all Courts in British India and in all proceedings without further proof of production of the original. S. 76 provides for appeals to the High Court having jurisdiction from the decision of the Registrar or Deputy Registrar. S. 78 enables the registered owner of a trade mark to protect himself in any legal proceedings by the production of a certificate of validity regarding the registration of his trade mark. S. 69 makes it obligatory on the tribunal to admit evidence of the trade usage, etc., in trade mark cases. S. 83 empowers the Central Government to enter into reciprocal arrangements with other countries for the mutual protection of trade marks. S. 85, which came into force on March 11, 1940, empowers the Central Government to make provision enabling intending applicants for the registration of trade marks to deposit these at the Patent Office prior to the commencement of the Act. The deposit of a trade mark will not affect any right, existing or accruing, in the trade mark.

6. The Indian Coinage (Amendment) Act.—The present Act gives legislative sanction to the minting of silver quarter rupees of the reduced fineness of one-half silver and one-half alloy. Under s. 2 the standard fineness of the Government rupee will be eleven-twelfths, or one hundred and sixty-five grains of fine silver, and one-twelfth, or fifteen grains of alloy: of the half rupee, eleven-twelfths, or eighty-two and a half grains of fine silver, and one-twelfth, or seven and a half grains of alloy: and of the quarter rupee, one half, or twenty-two and half grains of fine silver, and one half and twenty-two and a half grains of alloy.

7. The Reserve Bank of India (Closing of Annual Accounts) Act.—The accounts of the Reserve Bank of India were closed on the 31st December each year. As this date coincides with the height of the busy season, the Reserve Bank was experiencing considerable difficulty in closing its accounts and in preparing its annual report for submission to the shareholders within six weeks as prescribed in s. 14 of the Reserve Bank of India Act, 1934. The present Act enables the Reserve Bank to close its accounts on the 30th June of each year.

8. The Indian Emigration (Amendment) Act.—Under s. 25 of the Indian Emigration Act, 1922, emigration, except in conformity with the provisions of the Act, is declared to be illegal and a person committing such an offence can be arrested by a police officer without warrant. In the case of the departure by sea of persons in contravention of a notification issued under s. 30A of the Act, this power could not be exercised unless such departure was covered by the term "emigration" as defined in the Act. This Act remedies this defect. It also empowers Protectors of Emigrants to exercise the powers of detention, search, etc., which were hitherto exercisable only by officers of sea customs, for the prevention and detection of offences under the Act.

9. The Reserve Bank of India (Amendment) Act.—The Ceylon Government have arranged to set up a Board of Commissioners of Currency of Ceylon to manage their own currency, which is to be linked with the Indian rupee, though there will be an optional link with sterling. The Reserve Bank have agreed to act as the Indian Agent of the Ceylon Board. The Act enables the Reserve Bank to enter into an agency agreement with and to make advances to the Board of Commissioners of Currency, Ceylon.

10. The Arbitration Act.—The law of arbitration in British India was substantially contained in two enactments, the Indian Arbitration Act, 1899, and the Second Schedule to the Civil Procedure Code, 1908. In 1925 the Civil Justice Committee recommended several changes in the arbitration law and in 1938 the Central Government placed an officer on special duty to examine the question. The present Act is the outcome of this examination. It consolidates and standardises the law relating to arbitration throughout British India.

The Act came into force on July 1, 1940. "Arbitration agreement" is defined as a written agreement to submit present or future differences to arbitration; "award" means an arbitrator's award and "reference" means a reference to arbitration.

Sections 3 to 19 deal with arbitration without the intervention of a Court. Under s. 14 (1) parties to an arbitration agreement may agree that arbitrators be appointed by a third party. The authority of an appointed arbitrator or umpire is irrevocable except by leave of the Court (s. 5). Under s. 6 an arbitration agreement is not discharged by death of any party thereto. The authority of an arbitrator is not revoked by the death of any party by whom he was appointed. S. 8 deals with the Court's power to appoint an arbitrator or umpire in certain cases. Under s. 9 where an arbitration agreement provides that a reference will be to two arbitrators, one to be appointed by each party, then if either of the appointed arbitrators neglects or refuses to act or is incapable of acting or dies the party who appointed him may appoint a new arbitrator in his place; if one party fails to appoint an arbitrator for fifteen clear days after the service on the other party of a notice to make the appointment, such other party, having appointed his arbitrator may appoint the latter as a sole arbitrator in the reference and his award will be binding on both parties. The fact that an arbitrator or umpire after a request by either party to enter on and proceed with the reference, does not within one month comply with the request may constitute a neglect or refusal to act. S. 10 makes provision for cases in which more than two arbitrators are appointed. Where a reference is to three arbitrators the award of the majority will prevail and where there are more than three the award of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

majority or if they are equally divided, the award of the umpire will prevail. S. 11 empowers the Court to remove a dilatory arbitrator or umpire or one who misconducts himself or the proceedings. S. 13 sets out the powers of arbitrators and s. 14 deals with the signing of the award by the arbitrators or umpire and its filing in Court. S. 15 empowers the Court to modify or correct an award in certain cases and s. 16 deals with the Court's power to remit the award to the arbitrators or umpire for re-consideration under certain circumstances. An award so remitted will become void on the failure of the arbitrator or umpire to reconsider it and submit his decision within the time fixed by the Court. s. 17 provides for the pronouncement by the Court of judgment according to the award and upon the judgment so pronounced a decree will follow and no appeal will lie from such decree except on the ground that it is in excess of, or not otherwise in accordance with, the award. S. 19 provides that where an award becomes void or is set aside, the Court may supersede the reference and order that the agreement shall cease to have effect with respect to the particular difference referred. S. 20 allows parties to an arbitration agreement before the institution of any suit with respect to the subject-matter of the agreement and where a difference has arisen to which the agreement applies to apply to file in Court the arbitration agreement.

Sections 21 to 25 deal with arbitration in suits. Under s. 21 parties to a suit may apply to the Court for an order of reference to arbitration before judgment is pronounced. S. 24 permits some parties to a suit who are agreeable to having their differences settled by arbitration to refer such matters to arbitration provided that those differences can be separated from the rest of the subject-matter of the suit. An award made in pursuance of such a reference will be binding only on such parties.

Section 27 confers on arbitrators the power to make an interim award. Under s. 28 the Court may, whether the time for making the award has expired or not and whether the award has been made or not, enlarge from time to time the time for making the award. S. 30 sets out the grounds on which an award may be set aside. Ss. 32 and 33 provide that an arbitration agreement or award shall be contested only by application to the Court and not by suit. S. 34 deals with the staying of the suit where a reference concerning the subject-matter of the suit and between the same parties is pending. Under s. 35 subsequent legal proceedings will nullify the arbitration proceedings where the former relate to the whole of the referred matter and all the parties to the reference are impleaded in the proceedings. S. 38 deals with disputes as to the arbitrators' fees and costs. The Court may require the arbitrator to deliver up the award on the deposit into Court of the amount he claims and may then investigate the claim and grant to the arbitrator such sum as fees as it thinks reasonable. S. 39 deals with appeals from certain orders passed under the Act. S. 40 provides that a Small Cause Court will not deal with arbitrations other than arbitrations in suits before it. S. 48 saves references pending at the commencement of this Act; such references continue to be governed by the law in existence before the Act.

11. The Coal Mines Safety (Stowing) Amendment Act.—This Act makes it permissible to finance from the Coal Mines Stowing Fund, set up under the Coal Mines Safety (Stowing) Act, 1939, such measures as may be required to extinguish fires as well as protective measures generally, such as strengthening of boundaries between mines and the prevention of inundation of mines by water. Provision is also made to enable the funds of the Board to be spent on research work connected with safety in coal mines.

12. The Income-tax Law Amendment Act—This Act legislates permanently for the matter dealt with by the Income-tax (Removal of Difficulties and Validating) Ordinance, 1939. The Act also provides for the provisional collection of income-tax and super-tax in case the Finance Bill is not passed by the Legislature by the 1st April of any year; for the calculation of depreciation in respect of ocean-going ships on the basis of the cost of the assets instead of on the written down value of the assets; and corrects a few minor defects in the original Act as amended in 1939.

13. The Reserve Bank of India (Second Amendment) Act.—This Act restricts the number of shares held by an individual to a maximum of 200 shares and provides that no transfer should be registered in the name of any individual in excess of that amount.

14. The Parsi Marriage and Divorce (Amendment) Act.—Section 40 of the original Act made the payment of alimony of any sort cease if the wife at any time after the order for alimony either became unchaste or remarried. The expression " while she remains chaste and unmarried " was placed in clause (a) to the section but was inadvertently omitted from clause (b). The present Act remedies this by making the necessary amendments. Under this Act the decision to discontinue the allowance or alimony in the event of the wife remarrying or ceasing to remain chaste rests with the Court.

15. The Excess Profits Tax Act.—The outbreak of war, while it has necessitated greatly increased expenditure by the Government on defence and other services, has simultaneously created opportunities for the earning by companies and persons engaged in business of abnormally large profits. This Act secures for the Government a considerable portion of the additional business profits, which accrue as a result of the conditions prevailing during the war.

This Act imposes a tax of fifty per cent. of the excess of the profits made in any accounting period beginning on the 1st day of September, 1939, and ending on the 31st day of March, 1941, over what in the Act is called " standard profits." The Act contains necessary provisions for computing profits and capital and provides for its administration by officers of the Income-tax Department under the Central Board of Revenue. The Act contains provisions for assessment, collection, appeal, reference to the High Court on a point of law, penalties for false statements, etc., which closely correspond to those in the Indian Income-tax Act, 1922.

16. The Indian Finance Act.—This Act continues for a further period of one year the existing rate on salt duty, the present inland postage rates and the present rates of income-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tax and super-tax. S. 3 provides for the increase of excise duty on sugar, except palmyra sugar, from two rupees to three rupees per cwt. in the case of sugar produced on or after March 1, 1940. Under ss. 4 and 5 the excise duty on motor spirits is increased to twelve annas per gallon and the import duty on motor spirit to twelve annas per gallon. S. 7 which continues the existing rates of income-tax and super-tax allows a concession in the case of Co-operative Societies.

17. The Factories (Amendment) Act.—The Royal Commission on Labour drew attention to the desirability of regulating the working of small power factories which were outside the scope of the Factories Act, 1934, in respect of matters relating to health and safety. This Act extends the provisions of the Factories Act, dealing with health, safety, children and registration, to power factories, employing from 10 to 19 persons, if any of those persons is not qualified to work as an adult. Provincial Governments are given power to extend these provisions to power factories employing less than ten persons, if any of those persons is not qualified to work as an adult.

18. The National Service (European British Subjects) Act.—This Act brings European British Subjects in this country as far as possible into line with their fellows in other parts of the Empire in respect of service in the armed forces of, or in a civil capacity under, the Crown, during the present war.

The Act which came into force on April 9, 1940, applies to European British subjects in any part of India (s.1). "National service" is defined as service in the armed forces of the Crown or in any civilian capacity under the Crown (s. 2). Under s. 3 every male European British subject for the time being in India, except certain specified persons, is liable to be called up for enquiry into his availability and fitness for national service. The liability to be called up will remain until the person so liable has completed his fiftieth year. S. 5 provides for the constitution of National Service Advisory Committees to exercise the functions assigned to such committees by the Act, *e.g.*, to examine the case of any person ordered to present himself for enquiry and to report to the competent authority whether such person is available and is fit for national service. S. 7 provides for the taking into service of a person, who is willing to undertake national service, on the advice of a National Service Advisory Committee. S. 8 provides for the reinstatement of a person in his employment at the termination of his national service. This act does not apply to any person for the time being confined in a prison or a lunatic asylum or who is under the age of eighteen or over the age of fifty.

19. The Defence of India (Amendment) Act.—This Act makes certain minor amendments in the Defence of India Act, 1939. One of these enables rules to be made for the prevention of *inter alia* the spreading of reports in the prosecution of purposes likely to prejudice His Majesty's relations with States in India, or to prejudice the maintenance of peaceful conditions in the tribal areas. Another amendment renders the benefits of the Indian Soldiers (Litigation) Act, 1925, admissible to members of Indian States Forces while serving in the conditions specified in the section.

20. The Insurance (Amendment) Act.—This Act amends the original Act as amended in 1939 in regard to several matters which were brought to light in the first six months during which the Act has been in operation and in regard to which amendment was urgently required.

The principal amendments are as follows:—S. 2 extends the definition of "approved securities" by making it possible for securities issued by the Government of Indian States to be recognised as approved securities. This is designed to assist British Indian companies to secure reciprocal concessions under s. 118. S. 3 clarifies the position in connection with the cancellation of registration certificates of insurers under s. 3. S. 4 removes certain administrative difficulties arising out of the existing form of s. 7 in regard to deposits. S. 9 provides for the work of renewing the large number of agents' licenses, which have to be dealt with annually, to be distributed throughout the year instead of being concentrated about a single date. S. 10 clearly distinguishes provident societies from ordinary insurers and avoids the possibility that the same body could at one and the same time be subject as a provident society to Part III of the Act and as an insurer to the other provisions of the Act. S. 14 requires the Court to give the Superintendent of Insurance an opportunity of being heard before it passes certain orders. S. 15 enables the Superintendent of Insurance to delegate his powers and duties while retaining powers of control and revision, and provides that documents, *e.g.*, licenses, may be signed by a mechanical process. S. 17 extends the range of concessions that may be offered under s. 116 in order to assist British Indian Companies to secure reciprocal concessions in other places.

21. The Indian Tariff (Amendment) Act.—In view of the possible danger of interruption to, or delays in, communication by sea, the War Supply Board has decided to purchase a reserve of 7,500 tons of Wattle Bark at an estimated cost of ten lakhs of rupees, with a view to ensuring supplies for the important tanning industry. This Act imposes, as a temporary measure, a revenue duty of three per cent. *ad valorem* on imports of Barks for tanning, in order to safeguard Government against possible losses on the liquidation of the aforesaid reserve of Wattle Bark.

22. The Indian Tariff (Second Amendment) Act.—This Act extends the existing import duties on wheat, wheat flour and broken flour for a further period of one year, *viz.*, up to the 31st of March, 1941. The existing protective duties on silk and certain manufactures of silk are continued for a further period of two years.

23. The Drugs Act.—This Act regulates the import, manufacture, distribution and sale of drugs in British India.

"Drug" is defined as all medicines for internal or external use of human beings or animals other than medicines and substances exclusively used or prepared for use in accordance with the Ayurvedic or Unani systems of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

medicine (s. 3). S. 5 provides for the constitution of the Drugs Technical Advisory Board to advise the Central Government and the Provincial Governments on technical matters arising out of the administration of the Act. The Board will consist of sixteen specified persons who will hold office for three years. S. 6 provides for the establishment of a Central Drugs Laboratory under the control of a Director to carry out the functions entrusted to it by the Act. S. 7 provides for the constitution of an Advisory Committee to be called "The Drugs Consultative Committee" to advise the Central Government, the Provincial Governments and the Drugs Technical Advisory Board on any matter tending to secure uniformity throughout the provinces in the administration of the Act.

Section 10 prohibits the import of certain specified drugs, *e.g.*, any drug which is not of standard quality as set out in the schedule to the Act or any misbranded drug. Import of small quantities of such drugs for the purpose of examination, test or analysis or for personal use is permitted. S. 18 prohibits the manufacture and sale of certain specified drugs. Manufacture of small quantities of any drug for the purpose of examination, test or analysis is permitted. S. 20 empowers the Provincial Governments to appoint persons as Government Analysts and s. 21 deals with the appointment of Inspectors. Powers and procedure of Inspectors are dealt with in ss. 22 and 23. Under s. 26 the purchaser of any drug is entitled on payment of the prescribed fee to submit it for test or analysis to a Government Analyst and to receive from the latter a report of such test or analysis. The penalty under s. 27 for the manufacture, sale, etc., of drugs in contravention of the Act is imprisonment upto one year or fine up to five hundred rupees. Under s. 29 whoever uses any report of a test or analysis made by the Central Drugs Laboratory or by a Government Analyst, or any extract from such report, for the purpose of advertising any drug, will be punishable with fine upto Rs. 500. Under s. 31 the stock of the drug in respect of which the contravention has been made will be liable to confiscation. Prosecution for the manufacture, sale and distribution of drugs in contravention of the Act can only be instituted by an Inspector appointed under the Act.

24. The Indian Mines Act.—In order to ensure the efficient supervision of mines the Coal Mining Committee recommended that a regulation should be framed under the Indian Mines Act, 1923, providing for the payment by the owner of the mine of the salaries and wages of the manager, supervising staff, attendance clerks, and all persons employed in connection with the raising and lowering of persons. The supervising staff would then be responsible to the owner and not to the contractor and would see that the provisions of the Indian Mines Act, the regulations and Rules framed thereunder were properly enforced in the mines. The present Act inserts a provision in s. 29 of the original Act which would make it possible to frame a regulation of the type recommended by the Coal Mining Committee.

25. The Petroleum (Amendment) Act.—Section 2 restricts the unlicensed storage of petroleum by owners of motor conveyances or internal combustion engines to twenty gallons in all notwithstanding that owners may possess other motor conveyances or engines. S. 28 of the Petroleum Act, 1934, makes it obligatory on the Commissioners of Police in the Presidency towns of Calcutta and Bombay to hold inquiries into fatal accidents resulting from the ignition of petroleum or petroleum vapour occurring in those towns. The Coroners are also obliged to hold such inquiries in those towns under the Coroners Act, 1871. S. 3 releases the Commissioners of Police from the unnecessary duplication of work. A further amendment secures that the results of these inquiries should be submitted to the Chief Inspector of Explosives in India.

26. The Motor Vehicles (Amendment) Act.—Certain differences in the drafting of s. 48 and s. 56 of the Motor Vehicles Act, 1939, have given rise to doubt regarding the interpretation of s. 48. This Act amends s. 48 so as to remove the doubt.

27. The Agricultural Produce Cess Act.—Since 1929, when the Imperial Council of Agricultural Research was established, the Central Government have provided grants aggregating Rs.84 lakhs for expenditure by the Council on schemes of general research. The Council has practically no other source of income. The grants so far received have proved insufficient to meet the growing requirements of the research necessary to serve a vast agricultural country like India. In order to place the Council in a more secure financial position and to provide the steady development of research a larger and more stable income which would comparatively be unaffected by the financial vicissitudes of the Central Government was therefore considered necessary. The present Act in order to make better financial provision for the Council imposes on certain articles a cess by way of customs duty on export. The proceeds of the cess are estimated to amount in a normal year to about Rs.14 lakhs.

Section 3 imposes a customs duty of one-half of one per cent. *ad valorem* on the following articles which are exported from British India: Bones; Bristles; Butter; Cereals, other than Rice and Wheat; Drugs; Fibre for brushes; Fish; Fruits; Ghee; Raw Hides; Manures; Oilcakes; Pulses; Seeds; Raw Skins; Spices; Unmanufactured Tobacco; Vegetables; Wheat; Wheat Flour; and Raw Wool. This duty, however, will not be levied on articles proved to the satisfaction of the Collector not to have been produced in India. S. 4 empowers the Central Government to direct that the duty imposed on any article under s. 3 shall cease. S. 5 provides for the refund of duty levied where articles are exported by land and subsequently imported into India and the export by land, without payment of the duty, of articles which are subsequently to be imported into India.

28. The Indian Works of Defence (Amendment) Act.—This Act modifies the restrictions which attach by virtue of s. 7 of the Indian Works of Defence Act, 1903, to land in the vicinity of a work of defence in consequence of the publication of the notice mentioned in s. 3 (2) of the Act so as to make it possible to exempt from demolition specified buildings existing at the time of issue of the notice and permit these buildings to be maintained in the same condition.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

29. The Indian Navy (Discipline) Amendment Act.—The United Kingdom Naval Discipline Act provides for the imposition of purely naval punishments, such as the deprivation of good conduct badges, cell punishment, etc., for various offences for which imprisonment or fine may not be altogether suitable. S. 45 of the Indian Navy (Discipline) Act, 1934, renders the imposition of such punishments illegal. This Act amends this section so as to make legal the imposition of minor punishments according to the customs of the Navy.

30. The Indian Navy (Discipline) Second Amendment Act.—The Indian Navy (Discipline) Act, 1934, provides for the discipline of the members of the Indian Naval Forces when serving in His Majesty's Navy or in the Naval Forces of a self-governing Dominion, but there is no such provision for their discipline when serving with the Naval Forces of Burma. This Act provides for the discipline of the Indian Naval Forces when serving with Naval Forces of Burma.

31. The Cantonments (Amendment) Act.—This Act removes certain difficulties which have been experienced by the authorities concerned with the administration of Cantonments under the Cantonments Act, 1924, since the passing of the Cantonments (Amendment) Act, 1936.

Section 2 enables persons who are subjects of States in India to be enrolled as electors provided they are otherwise qualified. S. 3 prohibits a member of the Board from voting at a meeting of a Committee of the Board on a matter relating to himself or affecting his own interests. S. 4 provides for the removal of an elected member from the Board who accepts service under the Crown and then becomes subject to a disqualification for election. Provision is also made to remove a nominated official member who has ceased to serve in the Cantonment and has left without tendering his resignation for an inaccessible destination. S. 188 of the original Act empowers the Board to require the removal of unauthorised buildings over drains, etc. S. 7 removes the limitation on the scope of this power by substituting the word "structure" for the word "building."

32. The Repealing (Amendment) Act.—This Act removes from the Statute book certain Acts or portions of Acts which have either ceased to have effect or ceased to be in force, and to correct small errors detected in the Acts included in the Second Schedule to this Act.

33. The Indian Registration (Amendment) Act.—As the law stood before this Act, if a document of the kind referred to in clause (*e*) of s. 17 (1) of the Indian Registration Act, 1908, was registered at the office of the Sub-Registrar within whose jurisdiction no portion of the immoveable property affected thereby was situate, the Sub-Registrar neither indexed the property in his own office nor sent a memorandum or copy of the document under s. 64 or s. 65 of the Act to the other Sub-Registrar, or Registrar within whose local jurisdiction such property was situate. The present Act removes this defect by amending s. 28 of the original Act.

34. The Code of Civil Procedure (Amendment) Act.—The proviso to s. 29 of the Code of Civil Procedure after its adaptation by the Government of India (Adaptation of Indian Laws) Order, 1937, produced the curious result that the Courts of the Province mentioned in the notification would be required to serve summonses issued by Courts of any country outside British India irrespective of whether or not such country has entered into a reciprocal arrangement in this behalf with British India. This mistake made in adaptation is rectified by this Act. The Act also makes it clear that processes other than summonses issued by foreign Courts may also be served under s. 29 of the Code.

35. The Code of Criminal Procedure (Amendment) Act.—This Act empowers British Indian Courts to issue Commissions to any District Magistrate or Magistrate of the first class in British Burma to take evidence of persons residing within the local limits of his jurisdiction, and empowers the British Indian Courts to execute commissions issued by Courts in British Burma.

36. The Indian Companies (Amendment) Act.—The Indian Companies Act, 1913, does not contain provisions for the custody of unclaimed dividends and undistributed assets of companies in liquidation or for the disposal of subsequent lawful claims to such money. The present Act remedies this. S. 2 of the Act, which inserts a new section in the original Act, provides that where any company is being wound up, if the liquidator has in his hands any money of the company representing unclaimed dividends payable to any creditor or undistributed assets refundable to any contributory which have remained unclaimed or undistributed for six months after the date on which they became payable or refundable, the liquidator must forthwith pay the said money into the Reserve Bank of India to the credit of the Central Government in an account to be called the Companies Liquidation Account, and the liquidator must, on the dissolution of the company, similarly pay into the said account any money representing unclaimed dividends or undistributed assets in his hands at the date of dissolution. Any person claiming to be entitled to any money paid into the Companies Liquidation Account may apply to the Court for an order for payment thereof, and the Court, if satisfied that the person claiming to be entitled, may make an order for the payment to that person of the sum due. Any money paid into the Companies Liquidation Account which remains unclaimed for a period of fifteen years will be transferred to the general revenue account of the Central Government; but any claim preferred as aforesaid to any money so transferred will be allowable as if such transfer had not been made, the order on such claim being treated as an order for refund of revenue.

37. The War Donations and Investments (Companies) Act.—Certain clubs registered under the Indian Companies Act, 1913, have felt themselves legally debarred from making donations to war funds because their Memoranda of Association do not authorise such donations and those Memoranda cannot be altered under the existing provisions of the Act. This Act enables a company registered under the Act, whether a club or not, to make any contributions it wishes to war funds notwith-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

standing any legal impediments of the character mentioned above. The Act gives retrospective validation to any action of this kind already taken by a company since the outbreak of war. Under s. 3 a company is empowered by special resolution to authorise the making of a donation from the Company's assets to a public fund formed, or the making of an investment of the company's assets in a Government loan floated for the purpose of assisting the prosecution of the present war. Government loan under the Act includes a loan floated by the Government of the United Kingdom.

38. The Reserve Bank of India (Third Amendment) Act.—Under s. 42 of the Reserve Bank of India Act, a scheduled bank is required to maintain daily with the Reserve Bank a minimum balance equal to five per cent. of its demand liabilities and two per cent. of its time liabilities, and in case of default the Reserve Bank is entitled to charge interest at penal rates on the amount of default. There is no provision, however, in the Act to prevent the Bank from withdrawing its deposit, even up to the full amount, provided it is prepared to accept the liability to pay this penal interest on the resulting deficiency. This Act, in the interest of depositors and of sound banking in general, penalises directors and other officers of such banks who knowingly and wilfully are parties to such default. The punishment prescribed under the Act is fine up to Rs. 500 and a fine up to the same amount for each subsequent day on which the default continues. The Reserve Bank is also empowered to prohibit defaulting banks from accepting fresh deposits during the continuation of the default.

39. The Motor Spirit (Duties) Amendment Act.—This Act makes power alcohol dutiable independently of petrol by bringing it in its unmixed form within the definition of "motor spirit" contained in s. 2 of the Motor Spirit (Duties) Act, 1917.

40. The Indian Income-tax (Amendment) Act.—This Act remedies certain hardships caused by, and certain defects in the existing provisions of the Indian Income-tax Act, 1922.

The definition of "company" as amended now includes a company framed in pursuance of a law of an Indian State. It dispenses with the condition that a foreign association in order to be declared a "company" must be carrying on business in British India (s. 2). S. 5 removes a legitimate grievance of property owners by providing that the allowance for vacancies will be given on the gross annual value and not on the net annual value. S. 6 provides for relief in the case of non-residents with small incomes to whom hardship is caused by deduction of tax at the minimum rate. Provision is also made that deduction of tax at source will not apply to transactions such as "hedges and straddles" carried on between a resident broker and a non-resident broker. S. 23A of the original Act came into operation even if sixty per cent. of the company's assessable income after income-tax and super-tax had been paid was distributed. S. 7 of the Amending Act provides that the requirement will be a distribution of sixty per cent. of the assessable income as reduced by the amount of the income-tax and super-tax payable. S. 8 makes it possible to penalise a registered firm and put it in the same position as other assesses. Ss. 9 and 10 deal with recognised provident funds and make the provisions governing these funds more liberal and elastic. S. 13 substitutes the words "by a mutual insurance association or the words "by a mutual insurance company in rule 9 of the Schedule to the Act.

41. The Indian Sale of Goods (Amendment) Act.—In a recent judgment of the Lahore High Court it was held that since the wording of the preamble of the Indian Tariff Act, 1934, refers only to customs duties on goods imported into or exported from British India, s. 10 of that Act, which permits the addition to or deduction from a contract price of an increase or decrease in duty imposed after the making of the contract, does not apply to the excise duty on sugar produced in British India and intended to be sold within the country for home consumption. In order to put the matter beyond doubt and since the subject is germane to the law relating to the sale of goods and contracts for sale, this Act repeals s. 10 of the Indian Tariff Act, 1934, and re-enacts it as a section of the Indian Sale of Goods Act, 1930.

42. The Excess Profits Tax (Amendment) Act.—The United Kingdom Finance Act, 1939, which is closely followed by the (Indian) Excess Profits Tax Act, 1940, was amended by later Acts with a view to remedying certain hardships and anomalies. This Act amends the latter Act to remedy similar hardships and anomalies. Under s. 1 the provisions of this Act are deemed to have taken effect on the day on which the Excess Profits Tax Act, 1940, came into force. S. 5 provides for the case of a resident company which is the subsidiary of a non-resident company financed by the latter. The amendment secures that allowance is given for the whole of the capital of the group that actually earns the Indian profits. S. 6(*a*) corrects the hardship that exists where a United Kingdom company pays in the United Kingdom 100 per cent. of its excess profits, the whole of its profits being earned in India, and receives no allowance for such excess profits tax in computing the profits for Indian income-tax purposes because none of its profits actually arise in the United Kingdom. S. 6(*b*) ensures that excess profits tax paid in the United Kingdom in respect of a deficiency of profits in a chargeable accounting period is taken into account for Indian Income-tax purposes, whether such period is a chargeable accounting period in India or not. S. 9(*a*) provides that interest or salaries paid without British India, which are included in profits for income-tax purposes only in order to secure collection of the tax, are not to be included in profits for excess profits tax purposes. S. 9 (*b*) secures that in the case of banking, insurance or dealing in investments which forms part of a business not consisting wholly or mainly of such activities and not, therefore, within Rule 2 of Schedule I, the investment income from such part business is to be included in profits for excess profits tax purposes.

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King-Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexe may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first time brought into direct and formal contact with the outside world as a separate entity. She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1922 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it: "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including the Washington Conference on Naval Armament in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented or several permanent League bodies, *e.g.*, the governing body of the International labour office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. Sir Atul Chatterjee from 1921 onwards acted as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932. H.H. the Aga Khan was elected President of the League Assembly for the year 1936-37.

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion.

The Secretariat of the League of Nations has established a Branch Office at New Delhi in pursuance of its policy of promoting more effective liaison with India. The Branch Office is a point of contact between Geneva and India, disseminating information to all interested in the League and its activities. In addition to all League documents which can be consulted at the Branch Office, it keeps for sale all publications of the League of Nations. Established in Bombay in 1932, it was removed to New Delhi as from December 1937. The present address of the Branch Office is 8, Curzon Road, New Delhi. Officer in-charge of the Branch Office : M. V. Venkateswaran, M.A., J.P.

Labour in India.

GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty-five per cent. of her working population are dependent on the soil for their principal means of livelihood. Agriculture by itself, however, does not always afford, either to the agriculturist or to the agricultural labourer, the wherewithal for keeping body and soul together. It is necessary, therefore, for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door; but, the migration is generally always of a temporary character, and the agriculturist's contract with his land is seldom, if ever, permanently broken.

THE EARLIER FACTORY ACTS

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed; there were no periodical or weekly holidays; and there was no legislation to safeguard factory workers from injury through accident caused by entanglement with unfenced machinery in motion. With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men, notably the late Mr. Sorabjee Shapurjee Bengali, C.I.E., however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. This Act gave a limited measure of protection to children; firstly, by prohibiting, their employment in factories if they were under seven years of age and also in two separate factories on the same day; secondly, by restricting their hours of employment to nine per day; and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection the 1881 Act became a dead letter in most provinces. Most factories worked from daybreak to sunset, Sundays were usually working days and, if they were holidays, they had to be used for cleaning. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation in most factories was extremely bad and sanitation left much to be desired. In March 1889 the Government of India, after consulting local Governments, forwarded to the Secretary of State for India, definite proposals for the modification of the 1881 Act. The main amendments suggested were (1) the reduction of the number of workers necessary to constitute a factory to 20; (2) the raising of the lower age of children to nine; and (3) the restriction in the hours of work for women to 11. At the suggestion of the Bengal Chamber of Commerce and the Indian Jute Manufacturers' Association, a Factories Commission was appointed in 1890 to enquire into factory conditions in Bengal, Bombay, the North West Provinces and Oudh. On this occasion, female operatives were strongly opposed to any limitation of their hours of work if a similar limitation were not made for the hours of male operatives, and the Commission therefore recommended that the Government should have power to exempt any or all women from the clause limiting their hours to 11 daily.

THE FACTORIES ACT OF 1891.

The main features of the 1891 Act were: (1) the reduction in the number of persons necessary to constitute a factory from 100 to 50 and the grant of the power to local Governments to notify concerns employing 20 or more persons as factories; (2) a compulsory stoppage of work for half an hour between noon and 2 p.m. for all operatives except those employed in factories working on the basis of approved shifts; (3) provision for weekly holidays; (4) the fixation of the lower and upper limits of the age of "children" at nine and 14, the limitation of their daily hours of work to seven and to day light, and the prohibition of their employment in dangerous work; and (5) the limitation of the daily hours of work of women to 11, the restriction of their employment during 8 p.m. and 5 a.m., and the provision that if women were worked for the full eleven hours permitted by the Act they should be given rest intervals amounting in the aggregate to at least an hour and a half per day. Government accepted the recommendation of the Commission of 1890 for the exemption of any or all women from the operation of the regulation of their daily hours of work and a wide exempting clause was added in the 1891 Amending Act. The Act was regarded generally as the final word on the question of factories and His Excellency Lord Lansdowne speaking in the Legislative Council at the time said: "We believe that the effect of this measure will be to place factory labour in India on a proper footing and our Bill will be accepted here and at Home not as a mere prelude to still further restrictions but a settlement as final as any settlement of such a question can be."

Apart from the mass meetings of workmen which were organised in the eighties by humanitarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory

labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the huge industrial organisation that was rapidly coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unfettered power which he enjoyed of replacing all men who downed tools with black-leg labour.

INTRODUCTION OF ELECTRICITY AND THE GREAT PLAGUE.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread all over the country, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength. The immediate effect of these two events was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether.

The ravages caused by the plague were, however, not entirely devoid of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers; and the inequality between the demand for and the supply of labour naturally led to a marked improvement in agricultural wages. The beginning of the twentieth century saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

There was no further advance in factory legislation in India for twenty years after 1891. The period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, engineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. The cotton and the jute industries showed top figures in this expansion and the demand for labour began to get more and more acute as years rolled on. "The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive. The raising of wages was one step, the provision of houses was another....Inside the factory less was done to make industrial labour attractive...It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked."

Conditions of work in factories in India during the period were inquired into by the Freer Smith Committee which was appointed in 1906 and by the Factory Labour Commission which was appointed by the Home Government in 1907. The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children and were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr. Nair) recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hour day for women with less power to local Governments to grant exemptions. The findings of the Commission were circulated to all provincial Governments for opinions; and, in the light of criticisms received, the Government of India drew up a fresh Bill "to consolidate and amend the law regulating labour in factories." This Bill was introduced in the Governor-General's Legislative Council in July 1909. In drafting the Bill, the Government of India followed the proposals made by Dr. Nair rather than by the majority of the Commission.

THE FACTORIES ACT OF 1911.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions was made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated; but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect from the 1st of July 1912.

THE ADVENT OF THE GREAT WAR.

Matters in connection with the administration of the Factories Act of 1911 had hardly begun to be regularised when the whole world was convulsed by the outbreak of the Great War of 1914-1918. Metaphorically, the whole world was in the melting pot and Indian labour went into it too. The large contingents of Indian troops which were sent overseas had to be supplied with clothing, rations and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and material to the various seats of war. Heavy demands were also being made by both belligerent and other countries for raw products. Here was the opportunity for which India had been waiting for generations and she was not slow in seizing it. Much of her available arable land was put under cultivation, and there was an immediate and rapid expansion in every sphere of her industrial activity. Factories began to spring up everywhere; and all available means of transport were requisitioned for the carriage of men, beasts and goods to the ports and to the seats of manufacture. Indian labour was consequently faced with a more than capacity demand for its services. Local Governments were besieged by employers with requests for relaxations of existing restrictions in hours and conditions in factories. The ranks of the factory inspectorate were thinned as a result of some inspectors having joined the fighting forces and the duties of factory inspection were entrusted to officers already overburdened with other work. All the good preparatory work which had been done during the two years following the coming into effect of the 1911 Act appeared to be going by the board—but only temporarily, because Indian labour was no longer that dumb and inarticulate part of factory plants which it used to be during the years preceding the outbreak of the war. If workers were asked to work for longer hours they demanded and secured higher rates of wages. They were also not blind to the fact that employers were making bigger profits than before. Prices of all commodities were, moreover, rising and Indian operatives, like others, began to feel that they were not able to make both ends meet on prevalent rates. There were, therefore, frequent demands for increases in wage rates—demands which were not always granted without strikes; but the few strikes which occurred were mostly of an unorganised character and were short-lived because employers rather than allow production to suffer by prolonged stoppages of work reached compromises with their workmen by doling out small increases in wage rates at frequent intervals. Excessive hours of work, however, still continued to be the feature in all branches of industry and conditions inside the factories had worsened. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

THE AFTERMATH OF THE WAR.

The victorious and successful emergence of Great Britain, her dominions and her allies from the World War of 1914-1918 led the people of the British Empire, and particularly of India, to believe that the dawn of an utopia had at last arrived. Everybody expected that prices would fall, that there would be an ample scope of employment for all and that the end of the war would see the beginning of a long stretch of continuous prosperity for industry, trade and commerce. Merchants and manufacturers all over the world had made phenomenal profits during the period of the war—thirteen large jute mills in Bengal alone paid dividends of 200 per cent. and over for the year 1918—and with the gradual closing down of munitions works and factories engaged in the manufacture of war materials, these merchants and manufacturers were looking for new fields for investment. Property valuations increased fivefold and more. The huge reconstruction loans raised by the victorious nations were subscribed several times over within a few hours of the lists being opened. Prices of industrial securities rocketed and there were still large amounts of liquid funds available for further investment. Industrialists therefore got together and floated big companies for transport services by rail, road, sea and air, for the construction of new mills and factories and for the exploitation of mineral resources. Hectic building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour. The Utopian hopes which most men had built upon were, however, destined to evaporate into thin air sooner than the worst pessimists could have imagined. Two entirely unforeseen factors intervened to blast these hopes. The first was the worldwide epidemic of influenza which broke out in the year following the end of the War and which was responsible for a total death roll of over eight million persons in India alone. The second was that prices instead of falling rose more sharply than ever before—due, in a large measure, to the unprecedented depreciation in the currencies of most European countries.

Similar to the chance which Indian Industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily and a situation very similar to that which followed the great plague of the 'nineties was created; but on this occasion there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, fancy rates of wages were demanded and were, in many cases, paid. Wages, in the more organised industries, however, lagged far behind the rapid rise in prices and real wages began to become appallingly low. The beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, strikes on any organised scale upto then were rare and the employers were not giving anything away unless they were absolutely forced to do so. Prices, however, were still rising and it was literally becoming almost impossible for the workers to meet even their most necessary expenditure on the existing rates of wages

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Had employers then exercised greater vision and been a little more farsighted in granting adequate increases in wages without being forced to do so, the history of the labour movement in India during the last twenty years, so far at least as industrial disputes are concerned, might have been entirely different. Employers, however, were deaf to the approaching roars of thunder and they had to pay the eventual penalty for their short-sightedness in this matter.

The war had done much to educate Indian labour in the conditions of work prevalent and the methods of agitation adopted in other countries. Conditions, particularly as regards working hours, which had formerly been accepted as inevitable, were no longer regarded as tolerable; and while trade unions, as they are understood in the West, were still almost unknown, the value of concerted action was being rapidly realised. A number of strike committees were formed and many large strikes of a fairly concerted character met with almost instantaneous success in several industrial centres in India. The idea of organisation for the purpose of securing concessions received a substantial measure of recognition everywhere and it was not long before some of the earlier strike committees formed themselves into trade unions similar to those which had been formed in the previous century in most European countries. These earlier unions were formed with two main objects in view: (1) increases in wages; and (2) reductions in hours of work. The first was an imperative economic necessity. The second had received considerable support from the Indian Industrial Commission which had been set up by the Government of India in 1916 'to examine and report upon the possibilities of further industrial development in India' and to make recommendations with particular reference to new openings and to assistance by Government. In their report which was published in 1918, the Commission noted a growing opinion in India in favour of a ten-hour day and they recommended that the possibility of reducing the existing statutory maximum hours should receive further examination. There was a recurrence of the influenza epidemic in the winter of 1919-1920 and this was responsible for a total mortality in India of considerably over a million. The acute shortage which had been created in the supply of available labour by the earlier epidemic was accentuated by the later one. This gave added strength to the labour organisations that were coming into being in the matter of wage increases and reductions in hours.

The allied problems of excessive hours and the shortage of labour, were, however, to be temporarily solved by factors the operation of which nobody had foreseen. The gradual demobilisation of the armies of the war and the closing up of the various munitions works had disbanded tens of thousands of both men and women who in anticipation of re-employment in the great industrial enterprises which were being floated everywhere had spent the savings which they had secured during the war. Pre-war industries in the belligerent countries could not moreover, be re-organised at once. It was suddenly realised that resources would have to be husbanded and there was a perceptible decline in the purchase of commodities and the demand for manufactured goods. Production had necessarily to be eased off for stocks were accumulating. The spectre of unemployment loomed large. But, employers had learnt their lesson *re.* the difficulty of securing workmen during periods of acute shortage of labour and they were not prepared to disband large bodies of their work-people. They were, therefore, not unwilling to consider reductions in hours of work. Some employers who had already reduced hours found that production far from having fallen off had actually improved. A new angle of vision came into being and the trail was laid for reforms of a worldwide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance of these principles. The duties of this organisation which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

THE WASHINGTON CONFERENCE.

In accordance with a provision in the Treaty of Versailles, the first International Labour Conference met at Washington on the 29th October 1919 and sat for a month. India, as an original member of the League of Nations, was among the 39 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray representing Indian employers and Mr. N. M. Joshi

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases. The Washington Conference adopted the Hours Convention, but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

The ground for a reduction in factory hours had, however, already been partially prepared by the Government of India who, acting on the recommendations made in the matter by the Industrial Commission, had circularised all local Governments in June 1919 on the subject. The subsequent endorsement of a sixty-hour week for India by the Washington Conference received further support from the workmen themselves in the winter of 1919-20 which saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages. In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

CREATION OF GOVERNMENT LABOUR DEPARTMENTS.

Prior to 1920, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or All-India enquiries into wages or conditions of employment in industrial establishments. Official effort at mediation in industrial disputes was practically unknown and the policy of Government in this matter was to keep the ring clear and to allow the parties to settle all disputes between themselves. The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of Commissioners of Labour in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the late Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921. Further details in connection with this office and other matters dealing with Government administration of labour subjects will be found in a special section towards the end of this note.

THE FACTORIES ACT OF 1922.

A Bill to amend the Factories Act of 1911 was introduced by the Government of India in the Legislative Assembly in March 1921 and was passed into law in January 1922. The Amended Act was brought into effect from 1st July 1922. The main provisions of the new law as it now stood were as follows :—

1. The definition of the term 'factory' was extended so as to bring within its scope all concerns using power and employing not less than 20 persons. Local Governments were invested with powers to declare as factories concerns which employed not less than 10 persons.

2. No child under 12 was to be employed in a factory. The hours of work of children between 12 and 15 were restricted to six per day. A rest interval of half an hour was to be given after four hours' work and employment in two factories on the same day was prohibited.

3. Women's hours were restricted to eleven per day and to sixty per week and their employment at night was totally prohibited between the hours of 7 p.m. and 5-30 a.m. except in seasonal factories in the fish curing and canning industries.

4. Men's hours in all factories were restricted to eleven per day and to sixty per week.

5. All operatives were to be given a compulsory weekly holiday and provision was also made for the grant of a compulsory rest interval.

6. Exemptions on defined principles were to be permitted. Provision was made for controlling excessive artificial humidification when injurious to the health of the operatives. Various other provisions dealing with the health and safety of the operatives were also incorporated in the new Act.

Subsequent amending Acts passed in 1923, 1926 and 1931 made improvements of a minor character and no changes were made in any of the main principles laid down in 1922 until 1934 when a new consolidating Act was passed. The main features of the 1934 Act are dealt with lower down.

PROPOSALS FOR FURTHER LABOUR LAWS.

As has been pointed out above, little attempt had hitherto been made for the peaceful and amicable settlement of industrial disputes. The Central and the Provincial Governments at the time probably felt that in the absence of any reliable information regarding wage rates and conditions of employment in industrial establishments in India, it would have been futile for Government Officers to offer their services as conciliators in attempting to settle disputes. Bombay had already made a beginning by establishing a Labour Office for the collection of reliable and accurate data and the Government of Bombay, acting on the recommendations of the Provincial Legislative Council, appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, editor-in-chief of *The Times of India* " to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." In their report, the Committee, after setting down their views on various schemes of welfare which employers might adopt to improve the conditions of employment and of the life of their workpeople so as to make them more contented and less amenable to the influence of outside agitators, recommended that a statutory tribunal on the lines of the Industrial Court created by the United Kingdom Act of 1919 should be set up in the Bombay Presidency; and that all strikes which could not be settled without Government intervention should be referred to this Court. The Government of Bombay, acting on the recommendations of this Committee, drew up a Bill on the subject which was introduced in the local Legislative Council in 1923-24. In the meanwhile, however, the Government of India informed the Government of Bombay that they themselves were proceeding with similar legislation of an All-India character and they requested the local Government to abandon their own measure. In the meanwhile the Government of India drew up proposals for legislation for the regulation of conditions and hours of work in Indian mines, for the compulsory payment, by an employer, of compensation to workmen for injury resulting from accident arising out of employment and for the registration of trade unions. The Workmen's Compensation and the Mines Acts were placed on the Statute Book in 1923 and the Indian Trade Unions Act in 1926. The Trade Disputes Act was not passed till 1929. The main features of these several pieces of labour Legislation will be described in the special sections devoted to these subjects in this Chapter.

POST-WAR REDUCTIONS IN WAGES.

Unfortunately for Indian labour, a period of acute depression set in in all industries towards the end of the year 1922. Some of the first tasks to which the Labour Office created by the Government of Bombay in 1921 had set itself were to compile a cost of living index for working classes in Bombay City, to make an enquiry into their standard of life by the collection of family budgets for representative working class families and to make an enquiry into wages and hours of work in the cotton mill industry in the Bombay Presidency. The cost of living index compiled by that office—the first of its kind in India—showed that except for a slight fall during the earlier months of the year 1920, prices had been steadily rising after the end of the war for the next two years. The peak was reached in October 1920. The annual average of the monthly index numbers (1914=100) for that year was 183. A gradual decline, however, set in from the beginning of the following year and the annual average for the year 1921 registered a fall of ten points on the figure for 1920. A further fall of nine points was registered in the annual average for the year 1922. The year 1923 opened with a sharp decline to 156; but for the next five years—that is, up to the end of the year 1927, the optimum monthly variation was within eleven points between 150 and 161. The Report of the Family Budget Enquiry conducted by the Bombay Labour Office showed the standards of earnings and expenditure of some two thousand representative working class families and single men during the years 1921 and 1922 but no comparable figures were available for any other year. The report of the cotton mills' wages enquiry which was published early in 1923 showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent. higher in 1921 than in 1914. The Ahmedabad Millowners' Association, thereupon, made the first organised post-war move in India for wholesale reductions in wages. A cut of 20 per cent. was announced with effect from 1st April 1923. The strike of the Ahmedabad 1st cotton mill workers which followed was by far the largest and the most disastrous that has ever occurred in that city. It affected 56 out of 61 working mills, involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. It began on the 1st April and lasted till the 4th June. On that date a compromise was arrived at by the terms of which wages were to be reduced by 15½ per cent. instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

Cotton textile millowners in Bombay had met demands for higher wages between 1917 and 1920 partly by the grant of dearness of food allowances and partly by the payment of an annual bonus of one month's pay dependant on profits. In 1924, the Millowners' Association, Bombay, decided that the profits for 1923 would not justify the payment of the bonus. The workers of all mills in the city struck work. The Government of Bombay appointed Committee of Enquiry under the Chairmanship of Sir Norman Macleod, Chief Justice of the Bombay High Court. The Committee's report was entirely against the workers. The Bonus Dispute Strike in Bombay in 1924 was by far the worst that had ever occurred in the country until that year and resulted in a time loss of nearly eight million working days.

The depression which seti n in 1922 continued for several years. In the year 1925, however, the Goverument of India came to the rescue of the Cotton textile industry and the workers

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

employed in it by abolishing the excise duty of 3½ per cent., which had been levied on cotton manufactures in India for many years past. In that year, millowners in Bombay announced a cut of 12½ per cent. in wages. This announcement was followed by a general strike which lasted for over two months and which resulted in a time loss of nearly eleven million working days. Both sides were adamant but the Millowners had given an undertaking to Government to drop the proposal for a wage cut if the excise duty was abolished. The strike, therefore, ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November 1925. This strike "was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation, they were able to take concerted action and to offer a stubborn resistance against any attack on their wages."

It will have been noticed that so far prominence has been given only to the big industrial disputes that occurred in the textile industry in Western India. This should not be taken to mean that other industries and the other provinces in India were not troubled with industrial strife. As soon as Indian labour had realised the potential value of the strike as a weapon for securing redress of grievances, strikes began to get extremely frequent and the quinquennium 1921-1926 saw the outbreak of no less than 1,154 strikes in India involving nearly two million workpeople and causing a total loss of thirty-seven and a quarter million working days. Summary statistics for the main industries are incorporated in the following table:—

Consolidated Statement of Industrial Disputes for the Quinquennium 1921-25.

Industries.	Number of disputes.	Number of workers involved.	Man-days lost.
Cotton spinning and weaving	505	815,341	24,967,386
Jute	146	575,570	3,454,356
Engineering (excluding railway workshops) ..	65	71,590	1,031,779
Railways (including railway workshops) ..	59	135,254	3,087,504
Mines	29	30,632	261,198
Others	350	291,327	3,915,681
Total ..	1,154	1,919,714	37,317,904

A PERIOD OF QUIESCENCE.

The two years 1926 and 1927 were, as compared with the quinquennium which has just been reviewed, a period of quiet consolidation of their respective positions for both the employers and the employed and also for Government who had completed a heavy programme of labour legislation. There was a slight revival in trade and employers after the bitter experience which hey had had of disastrous strikes most dislocating to industry were content to allow sleeping dogs to lie as far as wages were concerned. Governments and employers had completed extensive industrial housing schemes, many employers had expanded their activities for the welfare of their workpeople and the cost of living index was steadily on the decline. The administration of the factory law had been improved by the 1922 Act and the avenues for evasions were so barricaded as to make breaches of the law most difficult if not impossible. Hours of work, as compared to hose obtaining five years previously, were congenial and permitted of sufficient rest and also of some relaxation and recreation. Absences from work began to get more frequent. All these and other factors were conducing to a decided improvement in the standard of life and the conditions of employment of industrial labour. The chief Indian industries were, however, still showing adverse balances in their profit and loss accounts and the shareholders were getting little or no return on the capital which they had invested in industry. The shareholders were consequently becoming somewhat restive, and harangues at annual general meetings of companies by the more disgruntled of them were becoming frequent enough to be noticed. The Indian Tariff Board (Cotton Textile Industry Enquiry) appointed in 1926had also made a number of recommendations aiming at a more efficient conduct and management of cotton mills in India. The more progressive firms, thereupon, began to devise ways and means for improving efficiency and for securing greater production at less cost. The methods of rationalisation which had been successfully attempted in the West received a measure of studious consideration and three go-ahead firms of cotton mill agents in Bombay City—Messrs. E. D. Sassoon and Company, Messrs. James Finlay and Company, and Messrs. Killick Nixon and Company—decided to try out schemes whereby cotton mill workers would be asked to look after a greater number of spindles and more looms. A beginning was made at the Manchester Mill of which Messrs. E. D. Sassoon and Company were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the agents. The attempt was at once met by a prolonged strike in that mill.

The advent of rationalisation in Indian industries synchronised with the entry of the principles of communism into the country and the formation of the Workers and Peasants' Party on models similar to those obtaining in Soviet Russia. Many communists secured appointments on the executives of several trade unions in India and they were not long before they made their presence on these bodies felt by inciting workers to go on strike on the most flimsiest of pretexts. The immediate object of these communists was not so much to improve the condition of industrial workers as to cause prolonged stoppages of work thereby sending batches of dissatisfied and disgruntled workmen back to their native villages to preach revolutionary doctrines of class hatred, the uprooting of capitalism and the smashing of stable Governments.

THE CLIMAX OF INDUSTRIAL STRIFE IN INDIA.

The year 1928 was one in which a handful of communist agitators in India secured a large measure of control over her industries through their almost complete domination over labour. They engineered large scale strikes in most industries and brought several to the verge of an almost complete standstill.

The most disastrous of the strikes which occurred in the year 1928 was that in the cotton mills in Bombay City and which alone was responsible for the loss of over twenty-two and a half million working days out of a total of over thirty-one and a half million lost to all Indian industries in that year. The direct cause of this disastrous strike which lasted from the middle of April to the beginning of October was the fear of unemployment created by the decision of certain millowners to introduce 'irrational' methods of work in their mills. During the progress of this strike proposals were made by the Millowners' Association, Bombay, for the enforcement of a scheme of standardized wages with a cut of seven and a half per cent. in the wages of weavers and for the introduction of a set of standing orders to regulate conditions of employment. Labour replied by drawing up its famous list of "Seventeen Demands." This strike was called off only when the Government of Bombay announced the appointment of a committee under the chairmanship of the Hon'ble the Acting Chief Justice of the High Court of Bombay, Sir Charles Fawcett, to examine and report on all these questions. The Report of the Committee which was published on the 26th March 1929 still continues to be one of the standard works of reference on conditions of employment in the cotton textile mills in Bombay City. The Committee held that the proposals which aimed at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable. On balance, the findings and recommendations of the Fawcett Committee were more favourable to the workers than to the employers.

Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, on the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore.

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR.

Reverting to the labour laws of 1922-1923, seven years' administration of these laws had brought several defects to light. Certain administrative defects had been rectified by Amending Acts but it was gradually felt that much of the legislation, as compared with similar pieces of legislation in the other industrialised countries of the world, was of a very halting character and that it did not go far enough. Several trade union leaders who had attended ten successive sessions of the International Labour Conference as Labour Delegates or Advisers started newspaper and platform agitation for both reform and expansion of the existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on Indian Labour "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India; on the health, efficiency and standard of living of the workers; and on the relations between the employers and the employed; and to make recommendations." The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the Commission were the Rt. Hon. Shrinivasa Sastri, P.C.; Sir Alexander Murray, Kt., C.B.E.; Sir Ibrahim Rahimtoola, K.C.S.I., K.B.E., C.I.E.; Sir Victor Sassoon, Baronet; Sir Andrew Clow, K.C.S.I., C.I.E., I.C.S.; Dewan Chaman Lal, M.L.A.; Miss Beryl M. Le Poer Power, Deputy Chief Inspector, Trade Boards, England and Messrs. N. M. Joshi, M.L.A.; Kabeeruddin Ahmed, M.L.A.; G. D. Birla, M.L.A.; and John Cliff, Assistant General Secretary, Transport and Railway Workers' Union, England. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the railways and associations of the employees and the employed left for England on the 22nd March 1930 to collect further evidence in that country. The Commission returned to India in the month of October of the same year and after completing that part of their tour which had been left unfinished in the previous winter, went to Delhi in November to draft their Report.

1929—A YEAR OF CROWDED EVENTS.

The year 1929 was a very momentous one in the history of the labour movement in India crowded as it was with events of prime importance. Early in the year there was extensive rioting in Bombay City which lasted for several weeks. An Enquiry Committee appointed by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government found that the immediate cause of these riots was the inflammatory speeches made by extreme left wing labour leaders. In February all the ring leaders among the ranks of the Communists were arrested and sent to Meerut for trial. References have already been made to the publication of the Report of the Bombay Strike Enquiry Committee and to the announcement of the appointment of a Royal Commission on Indian Labour. Mention has also been made of the passing of the Trade Disputes Act in that year. An Act amending the Workmen's Compensation Act was also passed by the central legislature and the Government of Bombay took the initiative in provincial labour legislation by passing a Maternity Benefits Act providing for monetary compensation by factory employers to their women workers for loss of wages during periods immediately prior to and following confinement.

The chief communist leaders had been arrested but their henchmen were not. Imbued with communist principles, these endeavoured to carry on the industrial strife of the year before. When a dispute arose in the Spring Mill in the month of April over the question of the dismissal of one worker, this was made a *casus belli* for the declaration of another general strike in the cotton mill industry. This strike, however, did not extend to all the mills in the city and island of Bombay as that of the previous year had done but still it was of a fairly general character involving 109,232 workers in 62 mills. It lasted from the 26th April to the 18th September and was responsible for a total time loss of nearly seven million working days. The Government of Bombay took advantage of the new Trade Disputes Act and appointed a Court of Enquiry under the chairmanship of the Hon. Mr. Justice Pearson of the Calcutta High Court to make a full investigation into the causes of the strike. The Court sat continuously for over a month and in their report which was published on the 16th September they came to the unanimous conclusion that the whole of the blame for the calling and the continuation of this strike rested with the Bombay Girni Kamgar Union. The moral effect of this report was so great that the Union called off the strike unconditionally on the day following its publication.

Another important strike which occurred in India during the year 1929 was one of the employees of the B.B. & C. I. Railway's Loco. and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad allowances and failing a restoration of the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims.

The last important event in this year of crowded events was the split which occurred in the Trade Union Congress at its tenth session which was held in Nagpur in the month of November of that year under the presidency of Pandit Jawaharlal Nehru. The Trade Union Congress was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual labour unions in India which till then remained inchoate and were unable to take concerted action; and (2) to recommend workers' delegates to the various sessions of the International Labour Conference. It remained the central organisation of the trade union movement in India for nearly a decade and most of the important unions in India were affiliated to it. The Congress met in a full-dress session once every year and discussed various leading questions connected with Indian labour. Early in 1929 the Bombay Girni Kamgar Union and the G.I.P. Railwaymen's Union—two organisations controlled almost entirely by communists—secured affiliation to the Congress. As the elections to the executive body of the Congress were conducted on the basis of the membership strength of the individual affiliated unions, the communists were able to capture a majority of the seats on the executive through the membership of these two unions and the Tenth Session was therefore entirely dominated by the communist section of the movement. Resolutions were passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League against Imperialism and for the appointment of the Workers' Welfare League, a communist organisation in England, as agents of the Congress in Great Britain. The passing of these resolutions marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by communist agents in India and brought to a head the question whether the trade union movement in India should be under the leadership of genuine trade unionists or of the votaries of communism. The moderate sections under the leadership of Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. R. Bakhale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of The Indian Trades Union Federation in order to co-ordinate the activities of non-communist trade unions in India. Further details in connection with these two All-India federations, their quarrels the further split in the Congress and the attempts made for unity will be dealt with in the Section on *Trade Unionism and Trade Union Law.*

THE CALM AFTER THE STORM.

The third decade of the twentieth century had been a most momentous period in the history of labour in India crowded as it was with almost continuous industrial strife, the appointment of committees and commissions to enquire into and make recommendations in connection with the cause of the strife and the laying of the foundation stone for a first class code of labour laws for the country. After the end of the general strike in the cotton textile mills of Bombay of the year 1929 trade unionism, except perhaps in Ahmedabad, was thoroughly discredited. There had been no wholesale reductions in wage rates in any of the larger industrial centres of the textile industry in India since the cut of 15 per cent. in the wages of the cotton mill workers in Ahmedabad in 1923 and with each successive fall in prices, real wages naturally improved.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Government of the Central Provinces and Berar followed the Government of Bombay by passing a Maternity Benefits Act in 1930. The extreme left wing in the leftist Trade Union Congress came to the conclusion in 1931 that the Congress was not as revolutionary as what it should be and this element broke away to form the All-India Red Trade Union Congress. It thus happened that instead of there being one co-ordinating body at the apex of the trade union organisation in the country to guide and control the movement, there were four separate federations the majority of which were useless and effete bodies with little influence and trifling membership.

PUBLICATION OF THE ROYAL LABOUR COMMISSION'S REPORT.

The report of the Royal Commission on Indian Labour was published in June 1931. The report is a document of first-rate importance dealing with almost every aspect of the labour problem in India and it contains many hundreds of recommendations covering a very wide field of subjects. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication; and it will continue to be the text-book for social legislation and labour welfare in India for many years to come.

A summary containing the principal recommendations of the Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India published annually from 1932 to 1940 reports on the action taken by the Central and Provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Calcutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers and Workmen's (Disputes) Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead letter was repealed in 1932. Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Act to control the deductions which employers may make from wages in respect of fines and to provide for the early payment of due wages was passed early in 1936. Various other proposals for new labour legislation in connection with employers' liability (re: "common employment" and "assumed risk"), extension of workmen's compensation to agriculture and forestry, fixation of hours of work of dock labourers, allotment of seamen's wages, exemption of salaries and wages from attachment, the shortening of wage periods, arrest and imprisonment of industrial workers for debt and for the prevention of the besetting of industrial establishments by money-lenders for the recovery of debts, have been considered by the Government of India in consultation with the various provincial Governments and some of these resulted in the introduction of Bills in the legislature. It is most unlikely, however, that all these proposals will result in legislation, because very weighty objections were raised during circulation on the various practical difficulties which would have to be contended with in the administration of any laws that might be framed to govern these matters.

FURTHER WAGE CUTS IN INDUSTRY.

The sharp downward trend of prices which set in about the middle of the year 1930 continued till May 1933 when the cost of living index for working classes in Bombay City touched par or 100 (1914=100). Wages in most industries, on the other hand, had continued almost at the same high levels of 1929-30—in many cases rates early in 1933 were double or more than double those prevalent in 1914. Following the cut of about 15 per cent. in wages which had been effected in the Ahmedabad cotton mills in 1923, the cotton mill workers in that centre had submitted a demand for a restoration of the cut in 1928. The matter was referred to arbitration. Workers on the spinning side of the industry secured an increase of eight per cent. and on the weaving side five per cent. The conciliation board appointed in connection with the Dohad dispute had decided in favour of the workers and against the Administration of the B.B. & C. I. Railway. Employers, therefore, were beginning to feel that the public generally and impartial arbitrators and conciliators in particular were determined that the standard of life which Indian industrial workers had attained as a result of the hard battles which they had fought must be maintained. They were therefore very chary of initiating proposals for reductions in rates. The commencement of the year 1933, however, saw the beginning of a new wave of depression in industry. Jute mills had already resorted to short-time working and several cotton mills and other factories were being compelled to close down. The Millowners' Association, Bombay, decided against a general wage cut in the cotton mill industry in the City of Bombay as a whole but permitted its individual members to take such action as they deemed suitable. Certain mills reduced the existing rates of dearness allowances, others attacked the basic rates and some reduced total earnings by specified percentages. These reductions evoked a storm of protest. Various representations were made in the matter both to the Governor and to the Government of Bombay when, at length, in March 1934, the Government of Bombay instructed its Labour Office to institute a Departmental Inquiry into the extent to which wages had been reduced during the year 1933-34 in the various centres of the cotton

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

textile industry in the Province and also to ascertain the extent of unemployment prevailing in the industry. Bombay and Sholapur were again the scenes of prolonged strikes in most cotton mills in these centres. The Report of the Departmental Inquiry was published on 21st June 1934 and the strike in the Bombay mills was called off simultaneously. The results of the Inquiry showed that, as compared with the general levels of 1926, wages in Ahmedabad in 1934 were five per cent. higher and twenty-one and seventeen per cent. lower in Bombay and Sholapur respectively. Notwithstanding the cuts that had been effected, real wages in 1934 were fifty-four, eleven and fifteen per cent. higher in Ahmedabad, Bombay and Sholapur respectively as compared with 1926.

The publication of the report of the Departmental Enquiry was followed by the Millowners' Association, Bombay, adopting a simple scheme of standard rates for unrationalised occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent. to raise this allowance to 40 per cent, after the coming into effect of the 54-hour week on the 1st January 1935.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6¼ per cent. subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days.

BOMBAY PASSES A TRADE DISPUTES CONCILIATION ACT.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible; and (2) for the appointment of the Commissioner of Labour as an ex-officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute. This Act was repealed with effect from the 1st August 1939, when the Bombay Industrial Disputes Act, 1938, which we describe lower down, was brought into operation for the cotton textile industry in the Province of Bombay. During the period of nearly four years for which that Act had been in force, remarkable results were achieved and there was much less industrial strife in the cotton mill industry in Bombay City than there had been prior to 1934.

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS.

The only Province which had so far instituted any inquiries into wages and conditions of employment in industrial establishments in India was Bombay where the Labour Office had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Royal Commission on Indian Labour, throughout their Report, had deplored the absence of reliable and accurate data regarding wages for Provinces other than Bombay; they had, moreover, made certain recommendations regarding the fixation of minimum rates of wages in industries where wages were low, but they had suggested that before any legislation on the subject was devised general surveys of wage rates and earnings should be conducted in all Provinces. Both for this and for the reason that no information regarding wages in the Province of Bombay was available for industries other than the cotton textile, the Government of Bombay instructed the Labour Office to make a survey of wages and conditions in factory industries —the first part to cover all perennial factories and the second seasonal factories. This census covered nearly 1,250 factories in over 25 different industries spread over nearly 100 towns and villages in the Province of Bombay. The first of the series of the General Wage Census reports covering the engineering trade was published in December 1935, the second covering the printing industry was published early in March 1936, the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937; and the fourth covering the Oils, Paints and Soap; the Match manufacturing and fourteen other miscellaneous industries was published in May 1939. The Report with regard to wages and conditions of employment in the seasonal factories was published in 1936. These reports contain a fund of most valuable information regarding wage rates, earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

THE INDIAN FACTORIES ACT, 1934.

The Royal Commission on Indian Labour made several very important recommendations for substantial amendments of the Indian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of factory owners, of the requirements of the Act. The Government of India accepted most of the Royal Commission's recommendations and these were incorporated in a new consolidating and amending Act known as "The Factories Act, 1934" which was brought into operation with effect from 1st January 1935. The main provision's of the law relating to factories as it stands today are as follows:

(*a*) *Classification of Factories.*—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of ground-nuts or the manufacture of ground-nut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a local Government may, by notification in the local official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(*b*) *Age and Sex Groups.*—Prior to the 1934 Act, factory operatives were divided into three age and sex groups: (1) adult males, (2) adult females, and (3) children of both sexes, *i.e.*, persons over 12 and under 15 years of age. A fourth group of 'adolescents' has now been introduced. These are defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(*c*) *Hours of Work.*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to ten per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(*d*) *Spreadover.*—The principle of "spread-over," *i.e.*, the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory was introduced in factory legislation for the first time in 1934. The spreadover in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, *e.g.*, in the fish curing industry, continues to be allowed.

(*e*) *Artificial Cooling and Humidification.*—The provisions incorporated in the 1922 Act with regard to the control of artificial humidification were expanded. A new principle was introduced whereby power was given to local Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort, provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(*f*) *Welfare.*—The new Act made provision for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances; (2) for adequate shelter for rest in factories employing more than 150 persons; (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women; and (4) for the maintenance of adequate first aid appliances.

(*g*) *Rest Intervals and Holidays.*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(*h*) *Overtime.*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*i*) *Certificates of Fitness for Children.*—Local Governments have been given powers to make rules prescribing the degree of fitness to be attained by children and it has been prescribed that whenever such a standard has been laid down, no child failing to attain it can be certified for employment in a factory.

(*j*) *Security of Factory Structures.*—Another new feature of the 1934 Act is the power which has been given to factory inspectors to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Local Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(*k*) *Exemptions.*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limited these powers and prescribed further that no exemptions were to be granted in respect of the provisions for spreadover, prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years.

The Factories (Amendment) Act, 1940, passed by the Central Government was brought into operation from 9th April 1940. This Act applied to power factories employing from 10 to 19 persons in which children are employed and extends to them the provisions of the Factories Act, 1934, relating to health, safety, regulation of child labour and registration. It is felt that this amendment will lead to the complete non-employment of children in small factories because rather than be compelled to register under the Act, the owners concerned would prefer not to employ children at all.

There has been an increasing tendency in most Provinces in India during recent years to take advantage of Section 5 of the Factories Act, 1934, by notifying all factories employing ten or more persons as "factories" for the purposes of the Act. In this connection it is of interest to record that Dr. K. N. Katju, Ex-Minister for Industries in the United Provinces conducted a detailed inquiry into alleged sweated labour in small factories for a period of over two years. He found that in over 300 factories employing 4,000 workers labour was sweated, there were no fixed hours of work and health and sanitary conditions were deplorable. The Government of the United Provinces thereupon took immediate action by declaring all such factories as employed 10 or more persons as factories for the purposes of the Act. The Second Conference of Labour Ministers held in January 1941 decided to amend the Factories Act by making registration of all factories employing 10 or more persons compulsory.

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the Central Legislature early in 1936. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 edition of the Indian Year Book. The more important provisions of this Act which were brought into operation with effect from the 20th May 1937 are as follows :—

(*a*) *Scope of Application.*—The Act in the first instance applies to factories and railways but local Governments are empowered to extend it to tramway or motor omnibus services; docks, wharves or jetties; inland steamer vessels; mines, quarries or oil-fields; plantations; and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(*b*) *Wages.*—'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Many industrial establishments, especially cotton textile mills, in India grant good attendance and efficiency bonuses in addition to wages. These bonuses operate as fines in cases where the standards for earning them are not attained. The Government of India, while framing the Act, included such bonuses within the ambit of "wages" but the definition of this term, as far as bonuses are concerned has been widely interpreted. The Government of Bombay held that existing good attendance and efficiency bonuses wherever they obtained must be paid without conditions and notified all factories accordingly. As a test case, the Arvind Mills in Ahmedabad were prosecuted in the City Magistrate's Court for non-payment of these bonuses in cases where the conditions for earning them were not fulfilled. The Magistrate held that bonuses were wages and directed that the deductions made should be refunded to the workers. The matter was taken into appeal in the Court of the Assistant Judge, Ahmedabad, where the decision of the Magistrate was upheld. The Mills thereupon filed a further appeal in the High Court, Bombay, which reversed the Ahmedabad judgments and held that all bonuses must be earned. The Government of India intend introducing a Bill in the Central Legislative Assembly to amend this Act with a view to clarifying the position of 'bonuses.'

(*c*) *Wage Periods.*—No wage period is to exceed one month and all wages are to be paid in coin and or currency notes.

(*d*) *Time of Payment.*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(*e*) *Permissible Deductions.*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a local Government may, by general or special order, authorise. The Central Government promulgated a Payment of Wages Amendment Ordnance in 1940 amending the Act to enable deductions being made from wages with written authorisation of the employed person for investment in any War Savings Scheme approved by a Provincial Government. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

(*f*) *Fines.*—No fines are to be imposed on children, *i.e.*, persons below the age of fifteen years. No fines can be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the local Government or of an authority which a local Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period is not to exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Local Governments have been empowered to make rules in connection with most of these matters.

In December 1937, the North Western Railway reduced the monthly pay of an engine driver by Rs. 7 for unsatisfactory work. The employee filed an application against the Railway in the Small Causes Court at Karachi for illegal deductions. The application was dismissed and the case was taken in appeal to the Chief Court of Sind. In a judgment dated 3rd February 1941, Mr. Justice Weston held that a reduction in an employee's wages by way of punishment was in contravention of the Payment of Wages Act and ordered a refund to the applicant of the amounts deducted from his wages.

(*g*) *Deductions for Absence from Duty.*—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (*i.e.*, if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7); provided that "subject to any rules made in this behalf by the local Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By an amending Act passed early in 1937 an explanation has been added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(*h*) *Deductions for Recovery of Advances.*—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses; and recovery of advances of wages not already earned are to be subject to rules to be made by local Governments.

(*i*) *Contracting-Out.*—No contracting-out is permitted.

(*j*) *Procedure.*—Local Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the Courts ignore the fact that even in such cases delay in making payments had occurred.

(*k*) *Administration.*—Inspectors of factories are to beresponsible for the admnistration of the Act as far as factories are concerned and powers are reserved to the Governor-General in Council and to local Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

C. P. UNREGULATED FACTORIES ACT, 1937.

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act seeks to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act, 1934, does not apply. "Unregulated Factory" has been defined as "any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on :—(*i*) bidi making, (*ii*) shellac manufacture, and (*iii*) leather tanning." A "child" has been defined as a person who has not completed his fourteenth year. The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

The notification of the application of this Act to *bidi* factories in the Central Provinces with effect from 1st March 1938 raised a storm of opposition by the owners of such factories and led to various kinds of harassment of the workers by the employers. Strikes and lockouts became frequent in the industry and in August, 1939, the Hon. Minister for Industries held two separate discussions on the subject with the representatives of the employers and the workers in this industry. As a result of these discussions, the Government of the Central Provinces decided to appoint a Committee of Inquiry to make a report on the whole subject. This Committee submitted its report to Government early in 1941 and it was reported, as we go to Press, that it is now under the consideration of Government. The *bidi* workers in the Central Provinces favour a wider and a stricter application of both this and the Payment of Wages Acts to them. The employers hold that the continued application of these Acts to the *bidi* industry would spell ruin for it. Consequently, the employers are reported to be resorting to measures to circumvent the Act either by breaking up the larger factories into smaller units in order to evade registration or by closing down the factories altogether and giving the work out on contract.

LABOUR UNDER THE NEW AUTONOMOUS PROVINCIAL GOVERNMENTS.

With the advent of the new reforms under the Government of India Act, 1935, full provincial autonomy was established in all Provinces in India with effect from the 1st April 1937. The Indian National Congress which is the largest, the most influential and the most well organised political party in India contested most and won the majority of the seats for the Legislative Assemblies in the Provinces of Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa. The Labour Policy of the Indian National Congress, as set out in its election manifesto is "to secure to the industrial workers a decent standard of living, hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards; suitable machinery for the settlement of disputes between employers and workmen; protection against the economic consequences of old age, sickness and unemployment; and the right of workers to form unions and to strike for the protection of their interests." The earlier resolution of Congress on fundamental rights, generally states in addition, that "the State shall safeguard the interests of industrial workers" and makes special reference to women workers and children. Congress Ministries, for reasons set out elsewhere in this volume, accepted office in July 1937 but resigned in all Provinces in November 1939 owing to the alleged failure of the British Government in defining clearly the war aims of Great Britain with special reference to India. Whilst in power, the Labour Policy of the Congress was amplified by responsible Ministers in various Provinces either by the issue of Press Notices or by statements made in public speeches. For example, in addressing a meeting of the representatives of the workers on the 19th February 1938, the Honourable the Minister for Finance in the Central Provinces declared that "the Congress Policy in regard to labour will be uniform in all Congress Provinces and it will be the aim of the Congress to secure you your rights without any struggle as far as possible." The most comprehensive statement with regard to this policy was contained in a press note issued by the Government of Bombay in August 1937 from which certain of the more important passages were reproduced at pages 521 and 522 of the 1940-41 Edition of this publication.

In Bengal, where a popular Ministry was formed with representatives from the Proja, the Muslim League, the Independent Hindu and the Independent Muslim parties, the policy of the Government with regard to labour was contained in a statement made by the Honourable Minister in charge of the Department of Commerce and Labour to representatives of the Press in September 1937. He stated that some of the important items which the Government of Bengal were considering for the amelioration of labour were the establishment of industrial tribunals, employment exchanges, decasualisation of labour, schemes for health insurance, adequate housing, regulation of employment in shops, conciliation of debts, penalising of illegal gratification and the institution of enquiries into conditions of living by means of collecting family budgets with a view to ascertaining whether it would be possible to introduce minimum wage

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fixing machinery and schemes of unemployment insurance.

We have during the course of this brief survey of the growth of the Labour Problem in India made an endeavour to mark the outstanding milestones in the development of the growing consciousness of their rights among the toiling masses of the country. This development was never so rapid as that which took place during the two years after the advent of Provincial Autonomy. The Governments of Bombay, Bihar, the Central Provinces and Berar and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment and to make recommendations. In the case of Bombay and the C. P. these enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar, labour in all industries was covered. The Government of Madras, following a prolonged strike of cotton mill workers in Coimbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries in India were, after a fairly prolonged period of depression, showing signs of revival owing mainly to the Sino-Japanese war. Prices of raw products had fallen during the latter half of 1937. The margins between costs of production and selling prices had widened to the advantage of industry and it was consequently possible for employers to accept the recommendations made by various Committees and Courts of Inquiry and Boards of Conciliation for increases in wages and the improvement of conditions of work. These acceptances were, however, not made entirely by employers of their own free will. In all cases the Governments concerned issued resolutions and notifications accepting such of the recommendations made by the Committees which they concurred in and recommending the adoption of these recommendations by the employers. It was obvious that non-acceptance of the recommendations made would be followed by legislative coercion if necessary.

During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly after a record debate of nearly 150 hours going over 33 days, their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unions of their workers; for the grant of holidays with pay during periods of sickness; and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, hotels, theatres, cinemas, etc. As far as the last is concerned, the Bombay Shops and Commercial Establishments Bill of 1939 was introduced in the Bombay Legislative Assembly by the Hon'ble the Prime Minister on the 17th April 1939 and received support from all sections of the House. This Bill was referred to a Select Committee of the House and was finally passed into law under the title of "The Bombay Shops and Establishments Act, 1939," on the 31st October 1939. Legislative proposals for the establishment of Employment Exchanges in the more important industrial centres of the Province were also under the consideration of Government.

There was a spate of activity for legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and Bengal enacted legislation during the year 1938 for the payment of maternity benefits and the Sind Legislative Assembly passed an Act in June 1939 to amend the Bombay Maternity Benefit Act, 1929, in its application to the Province of Sind. In the Central Provinces and Berar Bills were drawn up (1) for the collection of statistics; (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government; and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. The first has been passed into law but at the moment of writing (May 1941) it had not been brought into operation. The second was enacted in 1939 and brought into force with effect from 1st April 1940. Scales of registration fees depending upon the maximum number of persons employed in any one day in the year have been prescribed. No progress has been made with the third. The Governments of Bengal, Punjab and Sind have adopted legislation for the control of hours of work in shops and commercial establishments. The Pubjab Trade Employees Act has been enforced in Punjab with effect from 1st March 1941 and the Bengal Shops and Establishments Act has been brought into force in Bengal from the 1st April 1941. Draft Rules under the Sind Shops and Establishments Act, 1940, were published in the Sind Government Gazette on the 27th March 1941 and the Government of Sind intend to bring this Act into operation sometime about the middle of the year 1941. The Government of the United Provinces published, on the 21st October 1939, the draft of a Bill to regulate the hours of employment and certain conditions of employment in shops and commercial establishments. The Government of Assam had drafted a Bill for the freedom of movement of tea garden labourers in that Province but this has now been withdrawn. The Government of the United Provinces introduced a Trade Disputes Bill in the local Legislative Assembly but withdrew it later on with a view to the introduction of a fresh Bill on the lines of the Bombay Industrial Disputes Act, 1938. Private members' Bills introduced in the different Provincial Legislative Assemblies during the period immediately under review covered minimum wage fixing machinery and further regulation of conditions in unregulated factories in the Central Provinces and for the compulsory recognition by employers of unions of their workers in Bombay, Madras and in the United Provinces. As far as Madras is concerned, the Minister for Labour was successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which had been registered under the Indian Trade Unions Act. It is clearly impossible for us even to attempt to give brief summaries of all these various pieces of enacted or proposed Labour legislation but in view of their importance as models on which further legislation has been or is likely to be passed, we shall give below brief descriptive notes of the Bombay Industrial Disputes Act, 1938, and of the Bombay Shops and Establishments Act, 1939, and in the latter case we shall

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

also give the main points of difference between the Bombay, Bengal, Punjab and Sind Acts.

Notwithstanding the extensive reforms which had been carried out both by the Central and the Provincial Legislatures in India during the period 1923 to 1939, acute discontent was becoming increasingly manifest in most industrial centres. Strikes continued to be frequent, most of them short and sporadic, but some bitter and prolonged. The All-India Statistics of Industrial Disputes for the years 1937 and 1938 show that as against an annual average of 147 strikes during the thirteen years between 1924 and 1936, the number of strikes during these two years amounted to 379 and 399 respectively—the last being the highest since these statistics began to be compiled. The number of workers affected by these strikes was 6,47,801 in 1937 as against 1,14,217 in 1935. The next highest figure is 6,00,351 for 1921. Working days lost amounted to 8.98 millions in 1937 and 9.20 millions in 1938 as compared with less than a million in 1935. In both these years the principal scenes of industrial conflict in India were staged in the jute industry in Bengal and in the cotton textile industry in Cawnpore. It is of interest, however, to observe that the Province of Bombay, with the exception of Gokak, was singularly free from large scale industrial disputes during the five years 1935 to 1939 and that there was not a single strike in any of the cotton textile mills in Amedabad during the whole of the year 1938. The statistics given prove conclusively that the problem of industrial relations is the chief problem confronting Indian Industry and that further industrial development in India must depend upon a proper solution of it. In this connection it is of interest to observe that a Conference of the Prime Ministers of all the Provinces in India which was held in Poona in August 1939 decided on uniformity in Trade Disputes legislation and on the establishment of Industrial Courts in all the Provinces. Employers in Bengal have been awakened to a realisation of this, and at a meeting of the Calcutta members of the Employers' Federation of India held in August 1938 it was decided to form an Eastern India Committee for the purpose "of giving continuous consideration to the improvement of the well being and the efficiency of the workers in the establishments controlled by its members."

Among the more important events that occurred in the field of Indian Labour during the two years June 1937 to August 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in an exceedingly well written and interesting report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29, which should be read by everybody interested in Labour.

A Committee composed of trade union representatives, both inside and outside Parliament with Mr. John Jagger, M.P., as Chairman and Messrs. C. C. Poole and Krishna Menon as Joint Secretaries, was established in London in June 1939 with the object of furthering the interests of Indian Labour both in India and elsewhere.

EMPLOYMENT OF CHILDREN'S ACT, 1938.

The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their fifteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908, are applicable. By an Amending Act passed in 1939 the employment of any child who has not completed his twelfth year is prohibited in any workshop connected with *bidi* making; carpet weaving; cement manufacture including bagging of cement; cloth printing, dyeing and weaving; manufacture of matches, explosives and fireworks; mica-cutting and splitting; shellac manufacture; tanning and wool cleaning. The prohibition, however, does not extend to any workshop wherein any process is carried on by the occupier with the aid of his family only and without employing hired labour or to any school established by or receiving assistance or recognition from a Provincia Government. Provincial Governments are empowered by the Amending Act to add any description of process to the industries already scheduled in which the employment of children under twelve years of age should be prohibited.

BOMBAY INDUSTRIAL DISPUTES ACT, 1938.

This Act is perhaps the most advanced and outstanding piece of Labour legislation ever attempted in India. Put in a nutshell, the object of the Act is to make all strikes and lock-outs illegal until such time as the procedure provided for in the Act for conciliation and arbitration is exhausted. All industrial matters relating to wages; conditions of employment; privileges, rights or duties of employers or employees, or the mode, terms and conditions of employment or non-employment are divided into two schedules. All matters which regulate the relations between employers and employees such as rules of conduct or standing orders for operatives are listed under Schedule I. Matters connected with wages, hours of work and conditions of employment are listed under Schedule II. Government have power to modify these schedules (Section 72).

Standing Orders: Every employer in an industry to which the Act is made applicable is required to submit, within a period of two months from the date of the application of the Act to that industry, a draft of the Standing Orders which he proposes to adopt for governing the relations between him and his employees. The Commissioner of Labour is to "settle" these Standing Orders after consulting all the interests concerned in the industry. Any person aggrieved by any of the Standing Orders so "settled" has the right of appeal to the Industrial Court (Sections 26 & 27).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Changes: No employer is to be permitted to make any change in any of the Standing Orders settled by the Commissioner of Labour or by the Industrial Court on appeal or in respect of any industrial matter included under Schedule II unless notice of such intended change is given to the representative of employees. Any employee who desires a change in any industrial matter is also required to give notice of such intended change to his employer. Copies of all such notices are required to be forwarded to the Commissioner of Labour, the Chief Conciliator, the Registrar, the Labour Officer and to any other person as may be prescribed (Section 28).

Representatives of Employees:—The Act contemplates the creation of three distinct types of unions. In the first place no union which has not been registered under the Indian Trade Unions Act, 1926, will have any place in the scheme of things under this Act. Unions may be either *occupational unions* or *industrial unions*. Any union which has a membership of five per cent. of the total number employed in any occupation or industry in any local area and which has been recognised by the employers concerned or any union which has not been so recognised but which has a membership of twenty-five per cent. of the total number employed may apply for registration for the purposes of the Act (Sections 7 & 8). Any registered union which has a membership of twenty-five per cent. of the total number employed in the occupation or industry concerned may apply to the Registrar for declaration as a *representative union*. (Section 12). Unions which have a membership of five per cent. or more but less than twenty-five per cent. and which have not been recognised by the employers concerned may apply to the Registrar for being declared as *qualified unions*. (Section 11.) The three types of unions, therefore, are: (1) Registered Unions; (2) Representative Unions; and (3) Qualified Unions. "Representative of Employees" means (*i*) where the majority of employees directly affected by a change are members of a registered union, such registered union; or (*ii*) where some of the employees directly affected by the change belong to a representative union, that representative union; or (*iii*) in other cases such representatives not being more than five as may be elected in the manner prescribed by employees directly affected by the change from among themselves; or (*iv*) in cases where representatives are not elected under (*iii*) and in all other cases not falling under any of these clauses, the Labour Officer. (Section 3 (29). The Rules made under the Act make provision for the determination of the union which is a representative of employees; and, failing unions for the election of the workers' own representatives.

Preliminary Procedure:—On the receipt of a notice of change, the employer and the representative of the employees concerned are to discuss the proposed change. A period of fifteen days has been allowed for these discussions. If an agreement is reached between the parties, the memorandum of such agreement is to be sent to the Registrar for registration (Section 30). In cases where the Labour Officer is one of the parties, the Labour Officer is required to put the terms of the proposed agreement before a meeting of the employees concerned and he is empowered to enter into an agreement only if the majority of such employees concur (Section 32).

When dispute deemed to commence:—If the preliminary proceedings fail to produce an agreement, the party giving the notice is required, if he still desires that the proposed change should be effected, to send a full statement of the case to the Conciliator, the Chief Conciliator and the Registrar (Section 34). On receipt of the statement of the case, the Conciliator is required to enter the industrial dispute in a register (Section 35).

Conciliation:—The Act makes provision for the appointment of Conciliators and Special Conciliators. The Commissioner of Labour is to be the ex-officio Chief Conciliator for the purposes of the Act (Section 21). Provision has also been made for the appointment of Boards of Conciliation consisting of independent chairmen and members representing employers and employees to be selected by Government from panels formed for the purpose. (Section 23.) On making an entry of an industrial dispute, the Conciliator concerned has to try and bring about a settlement of the dispute (section 36) but power is reserved to the Chief Conciliator to intervene at any stage in any conciliation proceedings held by another Conciliator (Section 37). The Chief Conciliator or the Conciliator has to send a report of the whole case to Government on the conclusion of the conciliation proceedings, and in all cases where agreements are reached copies of the agreements are to be forwarded to the Registrar. (Section 38.) During the pendency of any proceedings before the Conciliator the Government *may*, and if both the parties agree either prior to the commencement of such proceedings or after the failure of the Conciliator to bring about a settlement *shall*, refer the dispute to a Board of Conciliation. (Section 39.) Government is empowered to lay down time limits for different stages of conciliation proceedings (Section 41) and the Act gives various powers to Conciliators and to Boards for summoning of witnesses, production of documents, etc. (Section 40.)

Industrial Court:—The Act makes provision for the appointment of an Industrial Court for determining industrial disputes and for dealing with other matters under the provisions of the Act. The Court is to consist of two or more members to be selected from persons who are, have been or are eligible, for being appointed as Judges of a High Court. (Section 24.) The Industrial Court, *inter alia*, is to decide all matters referred to it under Chapter II of the Act connected with the registration of unions and it has also to decide appeals from decisions of the Commissioner of Labour in connection with the Standing orders (Section 53).

Arbitration:—Any employer and a registered union may by a written agreement (called a submission) agree to submit any present or future industrial dispute or any classes of such disputes to arbitration of any person whether such arbitrator is named in the agreement or not to the Industrial Court. All submissions are to be registered with the Registrar. (Section 43.) In the absence of an agreement to the contrary, submissions are irrevocable but are terminable by giving six months' notice. (Section 44.)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The conciliation proceedings provided for under the Act are barred in cases where the representative of employees is a registered union which is a party to a submission. (Section 46.) The Act contains various provisions with regard to the duties of the Industrial Court, procedure before the Court, execution of orders as to costs and the parties on whom orders or awards of the Industrial Court will be binding.

Compulsory Arbitration in Certain Disputes :—Under the original Act, industrial disputes could be referred to the arbitration either of the Industrial Court or of any other person only when an employer entered into an agreement with a Union registered under this Act to do so. In centres or industries where there are no registered unions or even where there is a registered union but the parties cannot agree to refer a dispute to arbitration, arbitration in an industrial dispute is not possible. In order to make arbitration compulsory in certain cases, the Governor of Bombay promulgated The Bombay Industrial Disputes (Amendment) Act, 1941 on the 29th May 1941, by virtue of which power is given to the Provincial Government to refer any dispute to the arbitration of the Industrial Court if it is satisfied that the continuance of any dispute is likely to cause serious or prolonged hardship to a large section of the community, or seriously affect an industry and the prospects and scope for employment in it, or cause a serious outbreak of disorder or a breach of the public peace. The Amending Act has been applied to all the industries in the Province of Bombay to which the main Act had been applied.

Illegal strikes and lock-outs :—A strike or a lock-out will be illegal if it is declared, commenced or continued (*a*) in cases where it relates to any industrial matter mentioned in Schedule I before the Standing Orders relating to such matter and submitted to the Commissioner of Labour are settled by him or by the Industrial Court, as the case may be, or before the expiry of six months from the date on which such Standing Orders come into operation ; (*b*) without giving notice in accordance with the provisions of Section 28 ; (*c*) only for the reason that the employer has not carried out the provisions of any Standing Order or has made an illegal change ; (*d*) in cases where notice of change has been given and where no agreement in regard to such change is arrived at before the statement of the case is received by the Registrar ; (*e*) in cases where conciliation proceedings in regard to the industrial dispute to which the strike relates have commenced, before the completion of such proceedings ; (*f*) in cases where a submission is registered until such submission is lawfully revoked ; or in contravention of the terms of a registered agreement, settlement or award. In cases where conciliation proceedings in regard to any industrial dispute have been completed, a strike or lock-out relating to such dispute will be illegal if it is commenced at any time after the expiry of two months after the completion of such proceedings. (Sections 62 & 63.) The determination of the question of whether any strike or lock-out is illegal rests with the Industrial Court.

Illegal Changes :—No employer can make any change in any industrial matter in regard to which a standing order has been settled under Section 26 or which is mentioned in Schedule II before a notice in respect of such change has been given and the procedure laid down under the Act has been gone through. No employer can also make any change in contravention of the terms of a registered agreement, a settlement or an award. Any change made in contravention of these provisions will be illegal. Applications for the declaration of any changes as illegal are to be made to the Industrial Court. (Section 73).

Penalties :—Various penalties are provided for breaches of the Act (Sections 65 & 66) and for instigating or inciting others to take part in an illegal strike or lock-out. (Section 67.) Penalties are also provided for the making of illegal changes. (Section 69) ; for disclosing confidential information (Section 68) ; for obstructing persons from carrying out duties imposed by the Act (Section 70) ; and for victimisation of employees for trade union activities or for participating in any of the proceedings under the Act (Section 64).

Miscellaneous :—Important provisions of a miscellaneous character relate to the binding character of and the periods for which agreements are to remain in force (Sections 76 and 77), jurisdiction of Courts (Section 79), etc. In cases in which a representative union is a party to any agreement, settlement, submission or award, the Provincial Government is empowered, after consulting the Industrial Court if it deems it necessary to do so, to extend the agreement, etc., to all employees in the industry concerned [Section 76 (2)].

Officers and Areas :—In addition to the Conciliators and the Industrial Court, the Act makes provision for the appointment of a Registrar of Unions for the whole Province (Section 4) and for the appointment of Labour Officers (Section 22). The powers and duties of the Labour Officer are defined in Section 25. "Local area" means any area notified as such by the Local Government.

Application of the Act :—The Government of Bombay decided to apply the Act, in the first instance, to the Cotton Textile Industry in the whole of the Province of Bombay. It was applied to this Industry in three stages : (1) Those parts of the Act relating to the settlement of the Standing Orders and the appointment of the various administrative officers were brought into operation with effect from 1st June 1939 ; (2) The sections relating to conciliation and arbitration were applied from 1st August 1939 ; and (3) The provisions relating to illegal strikes and lock-outs and the penalties connected therewith were brought into operation from 20th August 1939. The term "cotton textile industry" was so defined as to include all factories notified under section 2 (*j*) of the Indian Factories Act, 1934, which are engaged in cotton spinning, cotton weaving with or without an admixture of silk, rayon or artificial silk, cotton knitting and hosiery, and all cotton dyeing, bleaching and printing departments, and mechanics' shops attached to such concerns. Every town and village in the Province of Bombay which has one or more cotton textile units according to the definition given has been declared as a "Local Area." The whole of the Act was applied to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Silk Textile Industry in the local area of Bombay City with effect from 1st October 1929 and to the Woollen Textile Industry in the local areas of Bombay and Thana with effect from 15th January 1940.

Repeal:—The Bombay Trade Disputes Conciliation Act, 1934, was repealed with effect from the 1st August 1939.

SHOPS LEGISLATION IN INDIA.

The first Province in India to enact legislation for the regulation of hours of work and conditions of employment in shops and commercial establishments was Bombay where the Legislative Assembly passed the Bombay Shops and Establishments Act on the 30th October 1939. Three other Provinces in India—Bengal, the Punjab and Sind—enacted similar laws during the year 1940. The Bombay Act was brought into effect from 15th November 1940. The Punjab Trade Employees Act came into force with effect from 1st March 1941 and The Bengal Shops and Establishments Act from 1st April 1941. In Sind the Government framed draft Rules under the Act early in 1941 and these were circulated for opinion. The final Rules were under the consideration of Government during the month of May and it was expected that the Sind Shops and Establishments Act would be brought into force sometimes during the latter half of the year 1941.

That legislation of this kind is necessary was shown by the results of an inquiry conducted by the Labour Office of the Government of Bombay in 1938 into the wages, hours of work and conditions of employment in the retail trade of some towns in the Province of Bombay. This inquiry showed that in Bombay city, employees in retail shops and restaurants had, on an average, to work for more than 12 hours a day, with very little provision for holidays or rest intervals. Nearly 65 per cent. of the 10,212 employees covered by the inquiry had to work for 11 hours or more, over 13 per cent. having to work not less than 15 hours a day. The object of this Act was to put an end to this state of affairs, while not overlooking the requirements of commerce and the consumer.

We shall first proceed to describe The Bombay Shops and Establishments Act in some detail and we shall then give a brief outline of the manner in which the Bengal, the Punjab and the Sind Acts differ from the Bombay prototype. The Bombay Act deals with three main types of establishments: shops; commercial establishments; and restaurants, eating houses, theatres and other places of amusement or entertainment.

Application of the Bombay Act:—This Act covers commercial establishments, shops, theatres or any other places of public amusement or entertainment, restaurants or eating houses. Government Offices and Offices of Local Authorities; clubs and residential hotels; bazaars or fairs for the sale of work for charitable or other purposes from which no profit is derived; hospitals, nursing homes and dispensaries; stalls and refreshment rooms at wharves and docks; chemists' and druggists' shops as are approved by the Provincial Government by a general or special order; and persons exclusively employed in the collection; delivery or conveyance of goods *are excluded* from the operation of the Act. The Act does not apply to persons occupying positions of management or employed in a confidential capacity; persons whose work is inherently intermittent such as that of travellers, convassers, watchmen and caretakers; and persons exclusively engaged in preparatory or complementary work, such as clearing or forwarding clerks or messengers.

Shops:—Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. This is half an hour longer than the ordinary factory day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five continuous hours unless he has had an interval of rest for at least half an hour. The Act makes it compulsory that every shop shall be closed not later than 9 p.m., provided, however, that any customer who was being served or was waiting to be served at 9 p.m. at any shop may be served in such shop during the quarter of an hour immediately following such hour. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists and druggists' shops, etc. In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on after 9 p.m. in or adjacent to a street or public place the sale of any goods. This will not, however, apply to the sale of newspapers. The maximum spread-over has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision has been made for the extension of the spread-over to 14 hours, provided such shops close for not less than three hours between the opening and the closing time.

Commercial Establishments:—As far as these are concerned, there are days in a week or a month or a quarter, when longer hours are worked than usual, and the same applies to the various exchanges where settlement days often give rise to abnormal working hours. It was, therefore, considered that it would not be advisable to fix the daily limit of hours in the case of such establishments and the Act, therefore, provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops, but in commercial establishments overtime to the extent of 120 hours per year is permitted so as to enable banks and other large establishments to deal with the pressure of work involved in the preparation of balance sheets, stock-taking, etc. The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are so arranged that they shall not together be spread over more than 12 hours in a day. The Provincial Government is, however, empowered to grant exemptions from this

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

requirement for not more than six days in every calendar year for each person who may be required to work on account of stock-taking, making of accounts, settlements or on other prescribed occasions.

Restaurants and Places of Amusement :—For these establishments, a ten hour day has been prescribed with a spread-over of 14 hours. These establishments have necessarily to keep open for long hours, but the intensity of the trade done varies and the spread-over of 14 hours gives the employers an opportunity of regulating the hours of work of their employees in accordance with the requirements of the trade. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

Miscellaneous Provisions :—No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But, no child who has not completed his twelfth year is allowed to work at all in the establishments covered by the Act. The hours of work in the case of young persons between the ages of thirteen and seventeen years are restricted to 42 per week and to 8 per day and no young person is permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning. All overtime work is to be paid for at the rate of a time and a quarter. Enforcement of the Act is in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act are liable, on conviction, to a fine which may extend to Rs. 25 for the first offence and upto Rs. 250 for every subsequent offence. The Act in the first instance has been made applicable to the City of Bombay, the Ahmedabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment and the Sholapur and Hubli Municipal Boroughs.

Main Differences between the four Shops Acts in India :—The Sind Act is applicable to almost the same classes of establishments as are covered by the Bombay Act. The Bengal Act, however, specifically exempts a much larger number of classes of establishments including the following : The Reserve Bank of India ; all public utility services ; shops dealing in perishable commodities like meat, vegetable, flowers, etc. ; shops dealing in articles required for obsequial ceremonies ; shops dealing in tobacco, *pan*, newspapers, etc. ; and such seasonal commercial establishments and the clerical establishments of such seasonal factories as may be exempted by Government. The Punjab Act has a much wider and a more universal application than any of the three other Acts ; but, shops dealing in perishables, medicines and newspapers ; all places of public entertainment ; hospitals and dispensaries ; clubs and residential hotels ; barbers and hair dresses ; stalls at railway stations ; and caretakers, porters, travellers, canvassers and domestic servants are exempted only from the operation of the sections dealing with opening and closing hours and the 'close day'.

Whereas the Bombay and the Sind Acts prescribe 9 p.m. as the closing hour for shops, The Bengal Act prescribes 8 p.m., while in the Punjab this varies with the seasons of the year—not later than 10 p.m., in the summer and 9 p.m., in the winter. The Punjab is the only Province which provides for opening hours—7 a.m. in summer and 8-30 p.m. in winter and the Punjab Act, therefore makes no provision for limiting the spread-over as the other Acts do. As far as hours of work are concerned, the Bombay Act places a daily limit in respect of shops and places of amusement and a monthly limit in respect of commercial establishments. In contradistinction to this, the Sind Act prescribes a maximum of 54 hours per week for persons employed in commercial establishments, the Bengal Act 56 hours a week for shops and the Punjab Act 54 hours a week for shops and commercial establishments. The Bengal Act does not place any limitations on hours of work—daily, weekly or monthly—in commercial establishments but places a maximum limit of ten hours per day for work in shops and in places of amusement. The Punjab Act prescribes a uniform ten hour day as the maximum that may be worked in any establishment covered by it.

The Punjab Act endeavours to restrict dual employment by providing that the hours worked by an individual employee with two or more employers should all be taken into account for purposes of recording. Whereas payment for overtime beyond the permissible daily hours is to be made at a time and a quarter in Bombay, Bengal and Sind, the Punjab Act requires overtime is excess of daily hours to be paid for at double rates.

While the Bombay, Punjab and Sind Acts provide that all the employees covered by these Acts should get one holiday every week ; the Bengal Act goes much further and prescribes that all employees should get one and a half holidays in each week. The Bengal and the Punjab Acts, moreover, prescribe that every shop shall also be closed for at least one and a half days and one day respectively in each week.

As far as employment of children is concerned the Bombay and the Sind Acts provide that no child below the age of twelve years shall be employed in any establishment covered by the Act. The Bengal Act has no provisions with regard to the non-employment of children whereas the Punjab Act prescribes a minimum age limit of fourteen years except in the case of apprentices who are permitted to be employed at 12 years of age.

Whereas the Bombay and the Sind Acts make no provision for the prompt payment of wages, the Bengal Act prescribes that all wages must be paid within ten days of the end of the period for which they are due and the Punjab Act prescribes a fortnight for this purpose.

The Bombay Act makes no provision for leave with pay ; all the three other Acts do : Sind—15 days' leave with pay during every year of service to lapse if not availed of within two months at the end of the year ; Bengal—14 days' privilege leave with full pay after every

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

twelve months continuous employment with right to accumulate up to 28 days and, in addition, casual leave on half pay for ten days in every year; and Punjab—14 days for a year's or 7 days for six months' continuous employment.

Two provisions which are to be found in the Punjab Act but not in the Bombay, Bengal and Sind Acts deserve special mention: (1) no employer may fine any employee to an extent greater than three pies in the rupee of his monthly wages; and (2) One month's notice or one month's pay in lieu of notice to be given by both the employer and the employee for termination of service.

The Sind and the Bombay Act have placed the duty of enforcement of these acts on the Local Authorities, whereas the Bengal and the Punjab Acts leave enforcement with the Provincial Governments. It has been estimated that the Bombay Act applies to sixty to seventy thousand concerns in Bombay City alone. The Bombay Municipality has appointed one Chief Inspector (G. R. PRADHAN, Ph.D.) and ten Inspectors for the inspection work in the Municipal limits of the City.

BOMBAY TEXTILE LABOUR INQUIRY COMMITTEE.

In October 1937, the Government of Bombay appointed a Committee with Mr. Jairamdas Doulatram as Chairman to investigate into the question of the adequacy of wages and kindred matters in connexion with the textile industry in the Province of Bombay. The other members of the Committee were Messrs. Vaikunth L. Mehta, D. R. Gadgil and S. A. Brelvi. Mr. Sakarlal Balabhai, M.L.A. and Sir Sorabji Saklatvala, M.L.A., representing the employers' interests and Messrs. Khandubhai K. Desai, M.L.A. and R. A. Khedgikar, M.L.A., representing the workers' interests were appointed Associate Members of the Committee to assist them in the proper presentation of the cases of their respective sides but with no power to partake in the final deliberations or to vote with regard to the decisions or recommendations which the Committee might make. Mr. S. R. Deshpande, B.Litt (Oxon.), M.B.E., was appointed Secretary. The terms of reference which the Committee were asked to consider were as follows:—

(1) To examine the wages paid to workers having regard to the hours, efficiency and conditions of work in the various centres of the textile industry in the Province and to enquire, in this regard, into the adequacy or inadequacy of the wages earned in relation to a living wage standard and, if they are found in any occupation, centre or unit of the industry to be inadequate, to enquire into and report upon the reasons therefor, and to make recommendations regarding:—

(*a*) the establishment of a minimum wage;

(*b*) the measures which the employers, the employees and the Government should take to improve the wage level;

(*c*) the remuneration of workers engaged on night-shift, and the regulation of night-shift work;

(*d*) standardisation of wages and musters; and

(*e*) the methods of automatic adjustment of wages in future.

(2) To report whether in view of the present condition of the industry an immediate increase in wages can be given in any occupation, centre or unit of the industry, pending the conclusion of the Committee's work and the preparation of its Report and to make recommendations in this behalf.

(3) To report on any matters germane to the above.

In accordance with para (2) of the terms of reference the Committee published an Interim Report in February 1938. After making a careful survey of existing conditions in the cotton textile mills in the Cities of Bombay, Ahmedabad and Sholapur, especially with regard to the prices of raw cotton and the manufactured article, the Committee reached the conclusion that the depression which had been adduced as the principal justification for the wage cuts which had been effected in the textile mills in the Province of Bombay mainly during the years 1933 and 1934 had lifted and that the capacity of the industry to earn profits was distinctly better than it was when the cuts were imposed. They were of the opinion, therefore, that it was not inappropriate for labour to entertain the hope of being able to participate in the relative prosperity which the industry now enjoyed. It was because of the reassuring position of the industry that the Committee held that the cotton textile industry could well face the future in a spirit of confidence and that it could meet, out of the substantial betterment that had already accrued and which would continue to accrue for the greater part of the year 1938, additional charges of a reasonable magnitude for raising the wage level. They accordingly recommended immediate increases in the wages of all workers employed in cotton textile mills in the Province of Bombay on scales which were intended to give the largest measure of relief to the lower-paid categories; *e.g.*, those whose earnings were below Rs. 13-8-0 per month were to be given three annas in the rupee, those between Rs. 13-8-0 and Rs. 25 two and a half annas in the rupee, between Rs. 25 and Rs. 35 two annas, between Rs. 35 and Rs. 40 one and a half anna, and those between Rs. 40 and Rs. 75 one anna in the rupee. Workers earning Rs. 75 per month and over were to get nothing. The general effect of these recommendations was to increase the existing total wages bill for the cotton textile industry in the Province of Bombay by about a crore of rupees per annum or by about 12½ per cent.

The Government of Bombay published the Interim Report with a resolution which stated that the conclusions and recommendations of the Committee, in the view of Government, were entitled to the weight and authority which should be attached to the award of an Industrial Court or a Court of Arbitration; and as such should be carried out and accepted both by employers and labour. Government further recommended that the increases in wages suggested by the Committee should be given commencing from the date of the disbursement of the wages due for the month of February

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1938 or for the last pay period in that month. Except for a few small concerns, all cotton textile mills in the Province accepted the Committee's interim findings and gave their workers the increases in wages recommended by them.

The Committee dispersed in February 1938 after submitting their Interim Report to Government. Owing to ill health, Mr. Jairamdas Daulatram, Chairman of the Committee resigned in the month of June and the Government of Bombay appointed The Honourable Mr. Justice H. V. Divatia, a Puisne Judge of the Bombay High Court, Chairman of the Committee in the month of September. Mr. N. A. Mehrban, M.B.E., F. S. S., Assistant Commissioner of Labour succeeded Mr. S. R. Deshpande as Secretary to the Committee when the latter went on leave in December 1938. The reconstituted Committee submitted its Final Report to Government in July 1940 and it was published by the Government of Bombay at the beginning of June 1941. The Report is a document of over 500 pages and contains 485 conclusions and recommendations covering a wide field of subjects. Some of the more important recommendations made by this Committee are reproduced below:

1. The Setting up of a Trade Board for the cotton textile industry in the Province with powers and constitution similar to those established under the Trade Boards Acts in Great Britain.

2. The adoption by the Millowners' Association, Bombay, of the scheme of Standardization of Wages, framed by the Committee for mills in Bombay City and Kurla, and the appointment, by the Government of Bombay of a Standardization Committee for putting the scheme into effect.

3. Compulsory periodical change-over of persons from one shift to another and shifts of not more than 8½ hours each in mills where two or more shifts are worked.

4. The appointment by Government of a Rationalization Committee consisting of three members each representing the employers and the workers with an independant chairman and two assessor members for examining, sanctioning and supervising schemes of rationalization or efficiency in cotton mills in the Province.

5. The creation of a composite Institute of Industrial Hygiene, Industrial Psychology and Industrial Welfare.

6. The main responsibility for Industrial Housing should rest with Local Authorities.

7. While the main responsibility for Education must rest with the State, employers as a class cannot be absolved from assuming responsibility in the matter. Various suggestions have been made as to what employers can do to help.

8. The present provision of beds in public hospitals is inadequate and steps should be taken to increase this provision.

9. Existing medical work in the mills is directed entirely to the curative side; the preventive side should be equally looked after.

10. Consumers Co-operative Societies should be established in all mills.

11. Wide and comprehensive schemes of Welfare should be established. These should include the provision of canteens, retiring and rest rooms. No attempts should be spared by all interested to provide industrial workers with adequate facilities for a proper and helpful utilization of their spare time.

12. Fining as a method of enforcing discipline should be abolished.

13. Good attendance and efficiency bonuses should be regarded as 'wages' for the purposes of the Payment of Wages Act.

14. All textile mills should be required to maintain air conditioning plants in certain departments.

15. A system of paying retirement gratuities after 15 years' qualifying service should be introduced in all the mills.

16. Financially strong concerns should start provident funds for the workers.

17. A compulsory and contributory sickness insurance scheme in which the employers, the workers and the State will all contribute should be started in Bombay and Ahmedabad and subsequently extended to other centres.

18. An Unemployment Insurance Scheme should be brought into operation for Bombay and Ahmedabad.

19. Sickness and Unemployment Insurance and Old Age Pensions should have priority over Holidays with Pay.

20. All mills should appoint their own Labour Officers and those employing a large number of women should appoint educated ladies as women supervisors.

21. Government should establish state-managed employment exchanges in Bombay, Ahmedabad and Sholapur.

22. Specialized industrial and technical institutions should be established by Government in all centres.

23. Government should examine the advisability of establishing Labour Courts for the speedy disposal of individual complaints regarding dismissals, etc.

24. Government should abolish the contract system of engaging labour.

25. Unions of workers in the textile industry should have a technical expert to help them in their work.

In examining the necessary standards for a living wage the Committee reached the conclusion that a two-roomed tenement was the minimum necessary and that the amount in normal times, necessary for the maintenance of a man, a wife and two children, on the basis of a living wage standard, is between Rs. 50 and Rs. 55 per month for Bombay City, five rupees less per month for Ahmedabad and eight to ten rupees less for Sholapur.

The Government of Bombay issued a Press Note with the Report when it was published. In this note, the Government of Bombay state that the Report of the Committee is a monumental work covering the whole organisation of the textile industry not only in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Province of Bombay but in the whole of India and that its findings and recommendations cover a wide field of subjects. Certain of the Committee's findings such as those on the living wage standard and unemployment insurance, Government feel, must, under the present economic conditions in the country, be considered as of a purely theoretical value and academic interest; some like those on sickness insurance, holidays with pay, etc., are of an all-India rather than of a provincial character and relate, moreover, to subjects which have already been discussed at the two conferences of Labour Ministers convened by the Government of India at Delhi in 1940 and 1941; whilst some others relating to such subjects as the establishment of committees for rationalization and standardization of wages, the formation of trade boards and labour courts and the establishment of employment exchanges would have to be subjected to close and careful consideration before any action can be taken on them. The Government of Bombay go on to state that some of the Committee's recommendations are not of great importance at the moment although they may become so at the end of the War. As a whole the proposals aim at providing standards for workers at a considerable cost both to the Government and to the textile industry. Before they can be adopted in whole or in part it would be necessary to achieve some agreement with other industrial Provinces and States, since the adoption of higher standards in one Province only is likely to be a handicap to industry and employment in that Province. Bombay, Government state, is already ahead of other Provinces in its labour legislation and welfare work and the time has come to urge the advance of other parts of India, *pari passu*, with Bombay, if the industry in this Province is not to suffer from the imposition of burdens from which industries elsewhere are free.

Copies of the Report which is priced at Rs. 1-5-0 each can be obtained from the Superintendent, Government Printing and Stationery, Charni Road, Bombay.

THE CAWNPORE LABOUR INQUIRY COMMITTEE.

Few cities in India have expanded industrially so rapidly as Cawnpore. In 1901 its population was 172,694. In 1931 this had increased by over a quarter to 219,819. Today it is variously estimated at being somewhere between 285 to 310 thousand. Besides having a large number of cotton spinning and weaving mills, Cawnpore is also an important centre of the tanning industry and it has a large number of engineering and other factories as well. The total factory population of the city in 1937 was over 75,000. Immediately after the advent of the Reforms, Cawnpore was a storm centre of conflict between capital and labour. When Congress took up the reins of Government in July 1937 industrial strife culminated in a complete stoppage of work in almost all cotton textile mills and several units in many other industries were also affected. The main demands centred round an immediate and an all-round increase in wages. Several deputations representing the interests of both the employers and the workers waited on the Hon'ble the Prime Minister, Pandit Govind Ballabh Pant and as a result of his eventual intervention in the dispute an agreement was concluded between the parties in the month of August 1937 by virtue of one of the terms of which Government agreed to appoint a Committee to examine and report on the conditions of life and work of labourers employed in factories in Cawnpore. The Committee as originally appointed in November 1937 consisted of Sriyut Rajendra Prasad Saheb (Chairman) and Sir Tracy Gavin Jones, Mr. Harihar Nath Shastri, Mr. Gulzarilal Nanda and Professor S. K. Rudra. Sir Tracy Gavin Jones and Mr. Shastri who represented the employers' and the workers' interests respectively mutually agreed to withdraw from the Committee in December. The services of Mr. Gulzarilal Nanda could not be spared by the Government of Bombay and Mr. B. Shiva Rao was appointed in his place on the 13th January 1938.

The terms of reference to the Committee ranged over a very wide field and covered questions connected with wages, night shift working, rationalization, recruitment and supervision of labour, leave and holidays, housing and welfare, the collection of labour statistics, etc. The Committee submitted their report to the U. P. Government early in April 1938. Government released the report for publication towards the end of that month with a Press Note expressing the hope that the suggestions and recommendations made by the Committee would lead to an amicable settlement of the pending differences between employers and workers, failing which Government would proceed to take the report into consideration and reach their own decisions. The report covers a very wide field of subjects and includes a host of recommendations which closely follow those made by The Bombay Textile Labour Inquiry Committee, some of the more important of which have been set out above. The Government of the United Provinces held a number of conferences with the representatives of the employers and the workers to examine the extent to which the recommendations of the Committee should be given effect to. The following are some of the more important matters on which agreement was reached :—

(1) The constitution of a wage fixation Board with an equal number of representatives of employers and workers with an independent Chairman to be selected by mutual consent failing which Government to appoint a Chairman from the ranks of Judges of the High Court or Senior District Judges. The Board would deal only with wage disputes of a general character and matters concerning individual Mills were to be dealt with by the Labour Commissioner.

(2) Schemes of standardisation of wages and Rationalisation to be facilitated.

(3) Government to set up a Labour Exchange.

(4) The Labour Commissioner to be the final authority in the matter of disputes.

(5) Government accepted the view of the employers that as regards social benefits such as leave with pay, sickness insurance, provident funds, etc., these were matters of a general character affecting all industries and should not be effected on a Provincial basis as all-India considerations were involved.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(6) The Mazdoor Sabha to be reconstituted on a sound basis with the assistance of the Labour Commissioner, that it should foster discipline in the Mills and be fully competent to prevent any strike being declared except after due deliberation and with the full consent of the workmen.

(7) Standardisation of conditions of employment and fifteen days' notice to be given of any proposed change.

(8) Acceptance by the workers of the increases in wages offered by the individual mills.

THE CENTRAL PROVINCES TEXTILE LABOUR INQUIRY COMMITTEE.

Following the example of Bombay and the United Provinces, the Government of the Central Provinces and Berar also appointed a Committee in February 1938 to examine and report on the wages question of the workers in the cotton textile mills in that Province. The terms of reference of the C.P. and Berar Committee were, however, restricted to an examination of the Interim Report of the Bombay Textile Labour Inquiry Committee with a view to reporting on (1) the extent to which the conditions in the cotton mills in the Central Provinces and Berar differed from those which formed the basis of the Bombay Committee's recommendations; (2) the changes that would, as a consequence, be necessary in these recommendations in their application to conditions in the Central Provinces; and (3) the date from which the modified recommendations should take effect. The Committee was composed of Mr. N. J. Roughton, I.C.S. (Financial Commissioner), as Chairman and Messrs. A. C. Sen Gupta (Principal, Morris College, Nagpur), V. R. Kalappa, M.L.A. and C. C. Desai, I.C.S. (Director of Industries), who was also to be Secretary to the Committee. The Committee was to be advised on technical matters by Mr. S. H. Batliwala, Manager of the Empress Mills, Nagpur and Mr. R. S. Ruikar, General Secretary, Nagpur Textile Union. The Committee submitted their report to Government at the end of April and the report was published in the middle of May 1938.

The Committee found that the condition of the textile industry in the Central Provinces and Berar was more like that of the mills in Bombay City rather than of either Ahmedabad or Sholapur and the proposals for wage increases should accordingly be based on those adopted for Bombay City. Owing, however, to the lack of uniformity in the wage cuts, the Committee were of the opinion that it would not be equitable to adopt a scheme of graduated rates of increases similar to that recommended by the Bombay Committee. The objection to the Bombay method, the Committee found, was that it gave an advantage to those mills which succeeded in introducing the largest wage cuts and which were now paying the lowest wages. Conditions in the Central Provinces were not the same as in Bombay in such important matters as the cost of living, the level of wages and efficiency of textile labour and therefore the Bombay schedule could not be adopted bodily for the mills in that Province and would have to be so modified as to suit local conditions. It was for these reasons that, in spite of the attractiveness of the Bombay method in that it gave greater relief to the lower-paid workers, the Committee preferred the system of restoring a fixed percentage of the wage cuts and they accordingly recommended that in all cases where wage cuts had been effected, 60 per cent. of the actual wage cut should be restored; and that, in addition, where new rates had, since the cut of 1933, been adopted for new employees, 60 per cent. of the difference between the new rates and the old rates should be added to the new rates. The Committee recommended that the restoration in the wage cuts proposed should be given with effect from the 1st May 1938. The recommendations of the Committee, with slight modifications made by Government were given effect to by all the mills and accepted by almost all the workers.

THE BIHAR LABOUR INQUIRY COMMITTEE.

Early in March 1938, the Government of Bihar appointed a Committee of Inquiry to enquire into the conditions of labour prevailing in the industrial centres as well as in the industries of the Province with particular reference to each important industry. Mr. Rajendra Prasad, who was also appointed Chairman of the Cawnpore Labour Inquiry Committee, was Chairman of this Committee as well. The other members of the Bihar Committee were Mr. M. P. Gandhi, Professor Abdul Bari, Mr. Jagat Narain Lal, Dr. R. K. Mukerjee, Mr. H.B. Chandra and Professor S.K. Saran who was also to act as Secretary to the Committee. The Committee had powers to co-opt one or more representatives of capital and labour. Owing to the continued ill health of Mr. Rajendra Prasad, Mr. R. R. Bakhale, a member of the Servants of India Society, Bombay, was appointed Deputy Chairman of the Committee in November 1938. The Committee was further strengthened by the appointment of Mr. G. M. Hayman, as a member. The Report of this Committee, running into nearly 300 pages and containing over 150 recommendations, was submitted to Government on 12th June 1940 and was released for publication early in August during the same year. The following are some of the more important recommendations which this Committee has made:—

1. Recruitment of Labour through contractors should be discontinued.

2. A Government Employment Exchange should be established in the Jharia Coal Fields.

3. A scheme of provident fund should be made compulsory for every industrial establishment.

4. Compulsory enforcement of fifteen holidays with pay for a minimum actual service of 265 days in a period of 12 months with variations for miners and loaders and workers in the engineering industry.

5. Pending the introduction of sickness, insurance, sick leave with pay, proportionate to period of service, should be granted.

6. Immediate enactment of legislation for maternity benefits.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

7. Extension of Factories Act to all establishments employing forty persons or more irrespective of whether power is used or not.

8. Establishment of an Indian Institute of Industrial Psychology and Fatigue.

9. Provision of housing on an adequate scale should be a statutory obligation on the industry. Government should lay down minimum standards.

10. Passing of a Debt Conciliation Act for industrial workers.

11. Extension of Payment of Wages Act to Mines and Quarries.

12. An adequate wage for the workers must always be taken into consideration in determining the quantum of protection for an industry.

13. Minimum wages should be laid down: Jamshedpur, Rs. 18 per month; Collieries, Rs. 20 per month for miners and Rs. 15 p.m. for loaders; other workers in Collieries and Quarries, Rs. 13 per month; Sugar Factories, Rs. 12 per month; Other Industries Rs. 13 to be achieved in three years.

14. Standardization of wages in the Shellac Industry.

15. Provisions similar to those of the National Labour Disputes Act of the United States of America should be incorporated in the Indian Trade Unions Act to allow trade unionism to follow its development without unjust interference by the employers.

16. Stay-In Strikes should be prohibited by law and no strikes or lockouts should be permitted unless at least fourteen days' notice thereof has been given.

17. An Industrial Court should be established for the Province of Bihar.

18. A Department of Labour on the lines of the Bombay Labour Office should be established without delay.

PAYMENT OF MINIMUM RATES OF WAGES.

A notable event during the year 1938-39 was a resolution passed by the Standing Committee of the Bombay Municipal Corporation on the 20th January 1938 to pay a minimum salary of Rs. 25 per month exclusive of benefits such as House Rent allowance or the value of free quarters wherever provided to all permanent male Municipal employees from the year 1938-39. It was also resolved that women, boys and men on daily wages should be excluded from the scope of the resolution. In this connection it is of interest to observe that under the Sugar Factories Control Act which has been passed in the United Provinces, Government have power to prescribe conditions of employment in crushing licenses granted to sugar factories. The Government of the United Provinces issued a communique on 22nd January 1940 recommending a minimum daily wage of five annas for labour employed in sugar factories and hoping that they would not have to enforce it under the provisions of the Act. The employers, however, do not appear to have followed the advice of Government in the matter for, in a Gazette Extraordinary published early in December 1940, the Government of the United Provinces fixed the minimum wage to be paid to workmen of sugar factories 'whether employed directly or indirectly by the licensee or through a contractor' at six annas per day.

THE OUTBREAK OF WAR.

Within twenty-two years of the signing of the Treaty of Versailles, Europe was again in the throes of a War in which most of the Great Powers of Europe are involved, and it has naturally affected the principal industries of India and Indian Labour to a great extent. Immediately prior to the outbreak of the War, the main Indian industries—especially the Textiles—were beginning to feel the effects of an onrushing slump. Stocks on the hands of the manufacturers were accumulating, night shifts were closing down and the Millowners' Associations of Bombay and Ahmedabad were engaged in a nation-wide campaign to resort to organised short time working. Industrialists all over India were again considering ways and means of reducing costs of production. The outbreak of War, however, stemmed the tide. There was a big world-wide demand for jute textiles in consequence of the widespread use of sand bags for the protection of public and other buildings against the effects of aerial bombardment. Cotton textiles and especially cotton yarns were finding more expanded markets outside the country. Night shift working was again resorted to in an increasing measure. The engineering and allied trades whose prosperity is closely linked up with that of the textiles began to look up. There was a wide expansion in many other industries consequent on the placing, by the Home Government, of large orders for war supplies. The employment situation improved but manufacturing costs began to soar up as a result of the increase in the prices of all products and commodities. One of the immediate effects of the outbreak of War was the simultaneous outbreak of rampant profiteering. The measures adopted by the Central and the Provincial Governments for the control of prices are dealt with below.

CONTROL OF PRICES.

One of the earliest repercussions of the War was the panic it caused in the commodity markets in the first few days. Prices showed a sharp tendency to rise and all food stuffs and other commodities were immediately affected. Merchants raised prices to exorbitant levels and there was clear evidence of profiteering on an extensive scale. Between the profiteer on the one hand and the hoarder on the other the honest consumer was exploited. The Government of India had foreseen the likely trend of events in the event of an outbreak of war and as soon as England declared war on Germany, the Central Government promulgated The Defence of India Ordinance, 1939, and the Defence of India Rules drawn up thereunder. Sub-rule (2) of Rule 81 of these Rules empowers the Central Government, by order, to make provision "for controll-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ing the prices at which articles or things of any description whatsoever may be sold." Sub-section (4) of Section 2 of the Ordinance empowers the Central Government to delegate their powers both under the Ordinance and the Rules on any Provincial Government. In accordance with these powers, several notifications were issued by the Central Government empowering Provincial Governments to take measures for controlling prices subject to certain conditions which were defined in these notifications.

All the Provincial Governments in India took immediate action on the basis of the above orders. The major lines of action are similar in all cases although minor details of procedure and administration have varied as between individual Provinces. Almost all Provinces appointed Controllers of Prices at Headquarters and empowered Deputy Commissioners and Collectors in charge of Districts to act as local controllers in respect of the areas within their jurisdiction. Both the Provincial and the District Controllers were to be assisted by Advisory Boards or Price Control Committees whose composition and functions varied according to whether it was a Provincial or a District body. For the Provincial Committees, persons representing the interests of the agriculturists and industrial workers were also included. The function of these Committees was to advise the Controllers on price control, to keep Government in touch with the trend of trade and the difficulties experienced by traders and manufacturers and generally to keep Government in touch with the situation as it developed locally. In some Provinces, Special Committees and in others Sub-Committees of the main Committees were appointed to deal with matters connected with medicines and drugs. Such Committees in the Districts are presided over by the Civil Surgeons. They deal mainly with the prices at which imported drugs, especially of German manufacture, are to be sold. Both prior to and after the appointment of these various Committees, comprehensive press notes were issued noting the commodities the prices of which were to be controlled and warning dealers that anybody charging higher prices would be prosecuted. Hoarding or refusing to sell was also to be punished. Purchasers were advised to demand bills for all articles bought and in cases where it was felt that excessive prices were being charged, to report the same to the Police. In the Punjab where, in flagrant cases, there was proof of unreasonable profiteering, instructions were issued to the Deputy Commissioners to initiate criminal proceedings against the offenders by getting a police officer to lodge information as required by Rule 130 of the Defence of India Rules. Generally speaking, however, the initiative in the matter was left to members of the public who were requested to send complaints supported by copies of bills to the Deputy Commissioners or other officers nominated by them in this behalf.

It was at first believed that as world prices would rise rapidly this would have its repercussions everywhere. In many cases prices, especially during the earlier stages of the war, rose from 15 to 100 per cent. Whilst some of this might very well have been due to panic, most of it must be attributed to the deliberate act of the traders to take advantage of the situation to earn quick profits. At the same time it was realised that the difficulties of keeping prices within control were enormous and not easy of solution. While the necessity of an effective control of prices was recognised, it was also felt that it would be inadvisable to deprive the cultivator of an increase in prices which would bring some relief to his door. All things considered, the first measure of control to be introduced was to permit increases from 10 to 20 per cent. on the prices ruling on 1st September 1939. District Officers were empowered to fix maximum prices for essential commodities and to take such other steps as might be necessary to check profiteering. All District and Provincial Controllers were asked to submit to their respective Governments, every week and in prescribed forms, the prices of certain essential commodities ruling in the markets. On receipt of these weekly prices each Provincial Government published a consolidated statement showing the comparative prices of these commodities in the important markets of the Province. Special Marketing Intelligence Services were organised to assist the Controllers in this work. The *modus operandi* was to take the closing rates for ready stocks at the major source of supply of each particular commodity listed.

There were distinct cycles in the tendency for prices to rise and fall during the period September 1939, to June 1940. The first setback was experienced in November, 1939. Most Provinces at this time abandoned the policy of fixing maxima and an experimental measure of issuing lists of fair prices instead was adopted. Simultaneously with this, reports of relevant wholesale prices in other Provinces were ascertained and these were communicated to all the District Controllers in the Province. The month of December recorded slight increases in prices all round but after January 1940 prices gradually declined. The worsening of the War situation in April with the consequential loss of continental markets brought about a further downward trend. The provision made in the earlier notifications of the Government of India requiring that in fixing maximum prices, the percentage above the ruling prices at the same stage as on 1st September 1939 should not be less than 10 per cent. above those prices was, therefore, deleted by a notification dated 25th May, 1940. Under this notification the basis of price control was made more elastic. This was a welcome modification of the price control mechanism since pre-war prices could be a guide and a standard only for a limited period after the commencement of the war. The equity of price control is best secured by relating prices to costs and by providing that costs are determined by a careful scrutiny. Under the notification referred to the power delegated to the Provincial Governments to control prices was restricted to the following articles only: grain, pulses and flour; raw sugar (*gur*); milk and *ghee*; vegetable oils; salt; chillies, turmeric and onions; kerosene oil, charcoal, steam coal and firewood; matches; medicines and household soap; fodder, bran, pollard and oilcakes; and cloths (dhooties, lungis, sarees and shirtings) of Indian manufacture woven from yarn of 20s counts warp or weft. The power to control prices of any imported articles other than medi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cines, kerosene oil and salt can only be exercised with the previous sanction of the Central Government. By a further notification dated 29th June 1940, Provincial Governments have been empowered to provide, by order, for prohibiting the withholding from sale, either generally or to specified persons or classes of persons, of articles or things kept for sale, and for requiring articles or things kept for sale to be sold either generally or to specified persons or classes of persons or in specified circumstances. This power can, however, be exercised only in respect of the articles enumerated above.

Some of the Provincial Governments utilised these powers and controlled the prices of certain articles on the new basis. The downward trend in prices continued up to August 1940 but since then prices again began to recover and by the end of the year a definitely upward tendency, especially in the prices of foodstuffs, had set in. Most Provinces confined themselves to publishing, for the information of the public, fair price lists of wholesale and retail prices prevailing in the chief markets in their respective jurisdictions. Their attention was also directed towards ensuring adequate stocks at all consuming centres and preventing profiteering by wholesalers, retailers and middlemen. A close vigilance is being kept on movements of prices in all Provinces and Governments have been swift in taking the necessary action with regard to price control whenever demanded. It must be remembered, however, that the power of Provincial Governments to control prices is necessarily exercised within somewhat narrow limits. Even for the commodities for the control of the prices of which powers have been delegated to Provincial Governments under Rule 81 (2) of the Defence of India Rules, Provincial Governments are not free to take unilateral action by fixing and maintaining prices at particular levels in watertight provincial areas. Several Provinces are dependent for large supplies of most of the essential commodities on other Provinces. Certain Provinces like Bihar, although important producers of foodstuffs, are, on balance, importers of the majority, and they are to all intents and purposes "consuming provinces." If such Provinces are to avoid a shortage they must accept the basic prices fixed in the major "producing provinces." Unilateral fixation of prices by such Provinces for the protection of the consumer against speculation and profiteering in the dominant basic wholesale markets is out of the question. The action of the Governments in such Provinces is, therefore, mainly directed to the control of "margins", that is to say, the margin between the wholesale price in the basic market and the retail price in the retail markets of the consuming Provinces. This object is achieved by the rapid collection and distribution among the Districts and sub-divisions of the latest statistics of wholesale prices ruling at the principal markets in the producing Provinces, thereby enabling local officers in consuming Provinces to adjust their prices. When the facts appear to justify such a course dealers are prosecuted for charging prices in excess of the legal maxima.

The Government of India have convened several Conferences of the representatives of all Provincial Governments and Administrations in India to discuss questions connected with Price Control. At one of these Conferences the view was largely held that, so far as agricultural produce was concerned, it was undesirable to check the rise in prices, at any rate, at that time. At another Conference, one of the conclusions reached was that in all places where effective control had been established there had been a tendency for supplies to dry up or to go underground and for normal business to be dislocated, and it was decided that it would be unfair, when the agriculturist was making some little profit, to put the screw on him and fix an upper limit for the prices of commodities. This Conference agreed to the desirability of the Central Government taking in hand the work of co-ordinating price control policy in the Provinces. It was decided that at the stage of production and with reference to the wholesale markets of some of the principal commodities, the Government of India should be the proper authority for limiting, should occasion arise, the prices of such commodities and that at the retail stage, the Provincial and State units should have complete freedom to fix maximum prices, such maxima being fixed on the basis of the wholesale prices fixed by the Government of India.

A serious shortage of rice was felt in Bombay as well as in many other consuming centres during the first quarter of 1941. In view of the successful efforts of the Government of Bombay to secure more freight space from the Government of India for the importation of rice from Burma the situation considerably improved. Two Conferences were held in Bombay with the leading importers of Burma rice, and in consultation with the trade, the Government of Bombay adopted a scheme under which prices, both wholesale and retail, for the different kinds of this rice are fixed and notified from week to week, in parity with prices ruling in Burma. By the time we went to Press the arrangement was working satisfactorily. In the Central Provinces, however, the Deputy Commissioner, Balaghat, fixed the price of rice early in 1941 as there was some trouble in the Tirora Mines but it was found difficult to enforce the order as it had the effect of restricting supply.

The price control measures adopted in various Provinces in 1939 were continued during the year 1940-41 and the Controllers of Prices appointed by almost all Provinces at Headquarter's stations continued to function. The following is a list of the Controllers of Prices in the various Provinces in India where such officers have been appointed :—

Bengal—M. K. Kirpalani; Bombay—F. J. Karaka; Madras—Shri Rao Bahadur C. P. Karunakara Menon; Central Provinces and Berar—K. D. Guha, M.Sc.; Sind—E. W. Trotman, I.C.S.; United Provinces—M. H. B. Nethersole, D.S.O., I.C.S.; Punjab—Joint Chief Secretary to Government; Assam—H. G. Dennehy, C.I.E., I.C.S.; North West Frontier Province—Revenue and Divisional Commissioner; Bihar—R. A. E. Williams, I.C.S.; Burma—F. B. Arnold; Delhi—H. J. Evans, I.C.S.; Ajmer-Merwara—The Assistant Commissioner.

DEMANDS FOR DEARNESS ALLOWANCES.

Unlike 1914, industrial workers in India in 1939 were not slow in demanding,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from their employers, increases in wages in the form of Dearness of Food or War Allowances to neutralise the rise in the cost of living. Provincial federations of unions affiliated to the All-India Trade Union Congress and individual unions forwarded petitions both to the Provincial Governments and to Associations of Employers, Railway Administrations and Large Labour Employing Organizations like the Port Trusts, Municipalities, etc., for the grant to industrial employees of dearness allowances ranging from 25 to 40 per cent. over existing levels of wages. The Bombay Provincial Trade Union Congress appointed a Council of Action consisting of prominent labour leaders in the Province to carry on intensive propaganda to secure these allowances in all industries but mainly in cotton textile mills in the City of Bombay. During the World War of 1914-18 and immediately after, Provincial Governments in India mostly followed a policy of non-intervention in disputes between Capital and Labour. Conditions then were, however, vastly different to what they are now. Trade unionism, then, was practically unknown in the country but in September, 1939, there were nearly 900 unions in India, of which nearly 700 were registered under the Indian Trade Unions Act. The majority of these Unions are under the control of communist or extreme left wing bodies, which, it was obvious, would not be slow in endeavouring to capture the imagination of the masses through propaganda ostensibly directed at securing wage concessions but mostly if not mainly aimed at the undermining of authority and the sabotaging of war effort. It is, and always has been, the policy of Government to do everything possible to foster and encourage the growth of *bona fide* trade unionism in India. At the same time, however, Government do not desire that Indian labour should fall a prey to subversive propaganda dictated and directed by communist organisations in foreign countries. India had had bitter experiences in the years 1928 and 1929 when a handful of communist leaders successfully dislocated almost all industries in the country by organising and carrying on large scale strikes for prolonged periods. It was vitally necessary, therefore, that subversive propaganda under the garb of trade union activities should be prevented, especially during a period when the whole country with Great Britain and the rest of the British Empire was engaged in a life and death struggle with a formidable adversary. At the same time, however, it was felt that the situation created by continuously rising prices was such that it was necessary that a certain measure of relief should be afforded to the workers and particularly to those on low rates of wages who were finding it difficult to make both ends meet.

With these objects in view, Ministers of Labour, Advisers to the Governors and other high Government officials in all the industrial Provinces of India soon established contacts and began a series of discussions with responsible representatives of the employers and the employed with the object of securing agreement on the extent of relief to be granted. In cases where no agreement was possible, employers were persuaded to grant concessions which, under existing conditions, were considered reasonable. The adoption of this policy met with considerable success in Bengal, the United Provinces, the Punjab and the Province of Madras. In the Central Provinces, Government failed to secure any concessions from employers in the Cotton Textile Industry and were impelled first to appoint a Court of Inquiry under the Indian Trade Disputes Act and then to constitute the Nagpur Textile Inquiry Committee to examine the question whether any dearness allowance should be granted to cotton mill operatives in Nagpur and if so to recommend the amount of such allowance and the date from which it should be given. The Court of Inquiry consisted of Mr. M. N. Clarke, I.C.S., District and Sessions Judge, Nagpur. The Court's Report was published in an Extraordinary Issue of the Central Provinces and Berar Gazette dated 28th March, 1940. The conclusion reached by the Court, for the reasons stated in its Report, was that no dearness allowance should be given having regard to the "present cost of living and the existing conditions in the industry." The Nagpur Textile Labour Union announced its intention to call a general strike from 8th April. A stay-in strike commenced in the Empress Mills from that date and the workers of the Model Mills struck work on the 15th April. As a result of protracted negotiations between Government on the one hand and the representatives of the Employers and the Union on the other, the strike was eventually called off on Government undertaking to appoint another Committee. This Committee was constituted by a Notification dated 1st May, 1940. Professor P. C. Mahalanobis, F.R.S., was appointed Chairman and Mr. K. D. Guha, Director of Industries, Nagpur, a Member. Mr. S. H. Batliwalla, Manager, Empress Mills and Mr. R. S. Ruikar, President, Nagpur Textile Union, were appointed associate members to help the Committee on technical matters. The report of this Committee was published in another Extraordinary Issue of the C. P. Gazette dated 25th May, 1940. This Committee recommended that a dearness allowance at a basic rate of six pies per day per worker would be appropriate against an average rise of about six per cent. in the index number of the cost of living for Nagpur since the commencement of the war and that this should be increased by one pie for every change of one per cent. in the three monthly moving average of the index number with August, 1939, as the base month. The management of the Empress Mills employing 14,000 workers decided to grant the basic increase of six pies per head per day but not to accept the sliding scale. The management of the Model Mills employing about 4,000 workers expressed their financial inability to accept either of these two recommendations. The Nagpur Textile Labour Union, thereupon, called a general strike in both the mills with effect from 3rd July 1940. On the management of the Empress Mills agreeing to accept the recommendations of the Mahalanobis Committee in full the workers of that mill resumed work on 14th July but those in the Model Mills remained out on strike until the 1st September, 1940, when they went back to work on the management informing them that if the financial position of the mills showed an improvement during the year sufficient to give some dividend to the shareholders who had received no dividends for a number of years

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

they would pay the workers a dearness allowance at the rate of six pies per head per day with retrospective effect from 1st July 1940. In accordance with this undertaking, the management of the Model Mills, on 1st January 1941, announced that all the workers in the mill would get a dearness allowance at the rate of half an anna per day with effect from 1st July 1940.

In March 1941, the management of the Empress Mills gave some increases in pay to clerks and made some adjustments in the rates of wages in certain sections of the mills where these appeared necessary. These adjustments led to an increase in the wage rates of a number of workers. Thereupon, all the workers in mill No. 5 of the Empress Mills demanded a general all-round increase in wages and they staged a stay-in-strike from the 19th to the 21st April. The Nagpur Textile Labour Union persuaded the workers to resume work but followed this up by formulating a list of Eighteen Demands including (1) complete restoration of the wage cut of 1933; (2) an immediate all-round increase of 25 per cent. in wages; (3) a bonus of fifty per cent. of war profits; (4) payment of dearness allowances on the scales recommended by the Mahalanobis Committee to the workers in the Model Mills; and (5) extension of provident fund benefits to all the workers in the Empress Mills. The remaining demands related to the internal working of the Empress Mills. Neither the employers nor the Government were given sufficient time for a proper consideration of the demands made and the Union called a General Strike in all cotton mills in Nagpur with effect from 1st May 1941. A series of discussions took place between Government and the employers on the one hand and the representatives of the Union on the other but no solution of the impasse could be reached. The managements of both the mills declared a lockout with effect from 4th May till such time as the workers showed their willingness to resume work peacefully and in sufficient numbers. On the 11th May the Union adopted resolutions to the effect that the demands for a 25 per cent. wage increase and a 50 per cent. bonus from war profits should either be settled amicably by the Provincial Government or that Government should appoint an Inquiry Committee whose decisions would be binding on both parties. On 2nd June 1941, the Government of the Central Provinces announced that nothing would be gained by any action on their part at the moment in view of the attitude of the two parties in the matter. On the 3rd June 1941, The Central Provincies and Berar Provincial Textile Representatives Conference, at a meeting held at Akola, decided that a General Strike of the workers in all cotton textile mills in the Central Provinces and Berar should be called with effect from 26th June 1941 on the demands submitted by the Nagpur Textile Union. On the 16th June, however, the Central Provinces Government announced their intention to appoint a Committee to enquire into and report on the disputes whereupon the workers of the Empress Mills resumed work on the 19th and those of the Model Mills on the 27th June.

In the Province of Bombay, the discussions on the question of dearness allowances, as far as the Textile Industries were concerned, had to be taken through the procedure laid down in the Bombay Industrial Disputes Act, 1938. In Ahmedabad, the Textile Labour Association served notices on all employers in the cotton textile industry on 15th December, 1939, demanding dearness allowances both in cash and in kind. On the parties failing to reach an agreement the matter was taken into conciliation before Mr. A. S. Iyengar, the local Conciliator. The Government of Bombay, however, considered it desirable, in view of the importance of this dispute, to refer it to a Special Conciliator and Mr. G. S. Rajadhyaksha, I.C.S., District and Sessions Judge, Ahmedabad, was appointed a Special Conciliator for this dispute on 20th January, 1940. Mr. Rajadhyaksha was not able to secure any agreement between the parties. Thereafter, several conferences, some of them presided over by Sir Gilbert Wiles, K.C.I.E., C.S.I., I.C.S., Adviser to His Excellency the Governor of Bombay, and Mr. D. S. Bakhle, I.C.S., Commissioner of Labour, were held between the parties but no agreement appeared possible and the Textile Labour Association called a general strike in the Ahmedabad cotton mills with effect from 26th February, 1940. As the result of a last minute intervention by His Excellency the Governor of Bombay, the parties agreed, by entering into a submission, to refer the dispute to the arbitration of the Industrial Court. The Court gave its award in the matter on 26th April, 1940, and this was published in an Extraordinary Issue of the Bombay Government Gazette dated 29th April, 1940. The Industrial Court awarded a cash dearness allowance of Rs. 3-8-0 for a difference of every 11 points between the official cost of living index figure for Ahmedabad for August, 1939, and the month two months prior to the one for which the allowance is to be paid. For those months for which the difference was higher or lower than 11 points, the allowance would be worked out proportionately. Thus, if the difference was 7 points, the allowance would be 7/11 of Rs. 3-8-0, if it was 18 points it would be 18/11 of Rs. 3-8-0 and so on. In addition to this, the Court ordered that cost price grain shops, to be run by a Joint Committee consisting of two representatives each of the Ahmedabad Millowners' Association and the Textile Labour Association and presided over by an independent Chairman, should be opened for cotton mill workers in that centre. About fifteen such shops were opened by the end of the year 1940 but the scheme has not worked quite satisfactorily for reasons which it is not necessary to enter into here. By a subsequent decision of the Industrial Court, its main Dearness Allowance Award does not cover workers employed through or under contractors in any of the cotton textile mills in Ahmedabad. Early in March 1941, the Textile Labour Association, Ahmedabad, gave a notice to the Ahmedabad Millowners' Association demanding increased rates of dearness allowances in view of the good profits which were being made by the industry. It was intended that if a satisfactory agreement could be reached between the two parties through mutual discussion both the parties would take the matter to the Industrial Court with a view to getting the agreement ratified in the form of an award given by the Court. No decision in the matter had, however, been reached up to the beginning of June 1941.

In May 1941, the Ahmedabad cost of living index stood at 81 as against 73 in the pre-war month (August 1939). According to the award of the Industrial Court, therefore, the Dearness Allowance which will be payable to workers in cotton textile mills in Ahmedabad for the month of July 1941 will be 8/11ths of Rs. 3-8-0 or Rs. 2-8-8.

In Bombay, five elected representatives of the New China Mills served a notice on 3rd February, 1940, on the Management of the Mill demanding a dearness allowance of 40 per cent. and on their failing to secure an agreement, took the matter into conciliation. The Millowners' Association, Bombay, on the same day, made the issue a general one under section 29 of the Bombay Industrial Disputes Act and notified all mills which were affiliated to the Association that they would be covered in the ensuing proceedings. The Government of Bombay, thereupon, on 4th February, 1940, appointed a Board of Conciliation, under section 23 of the Act, consisting of Sir Sajba Rangnekar, an Ex-Judge of the High Court, Bombay, as Chairman, and Messrs. J. C. Setalvad, A. S. Trollip, Jamnadas M. Mehta and S. C. Joshi as Members, to promote a settlement of this dispute. The Conciliation Board failed to secure an agreement between the parties for the reasons stated in their Report which was published in an Extraordinary Issue of the Bombay Government Gazette dated 26th February, 1940. The Board, however, arrived at the conclusion that a dearness allowance at a flat rate of two annas per day be given during the war as an addition to the wages of cotton mill workers in Bombay to cover variations in the official cost of living index number for Bombay between 105 and 123, that this allowance should be given to all employees drawing under Rs. 150 per month, with retrospective effect from 1st December, 1939, and that in the event of the index number falling outside the limits of 105 and 123 for any three consecutive months, an adjustment of the proposed allowance would be necessary. Almost immediately after the publication of the Board's Report, the Millowners' Association, Bombay, issued a press *communique* accepting the Board's conclusions and agreeing to pay the allowances recommended. The Bombay Girni Kamgar Union and the Council of Action, however, refused to accept the Millowners' offer and they called a general strike which lasted from 3rd March to 13th April, 1940, and which involved a time loss of four and a half million working days. The Millowners' Association carried on an intensive counter propaganda to that conducted by the Union and by the 12th April they had succeeded in securing an attendance of nearly 50,000 workers in more than half the number of mills in the City. On that day the Council of Action called a monster meeting of mill workers in the City and the meeting concurred in the decision of the Council to call off the strike.

Similar disputes in the cotton textile industry at Sholapur and in the woollen and the silk textile industries in Bombay were settled through conciliation by the parties agreeing to the grant of dearness allowances ranging from one anna per day in Sholapur to one anna nine pies per day to silk textile workers and two annas per day to woollen textile workers in Bombay City. As far as the employees of the Bombay Electric Supply and Tramways Company, Ltd., were concerned, the Government of Bombay on 14th March, 1940, appointed a Board of Conciliation consisting of Sir Govind Madgaokar, an ex-Judge of the Bombay High Court, as sole Member, under Section 3 of the Trade Disputes Act, 1929. This Board was also not successful in securing an agreement between the parties but it recommended that dearness allowances at flat rates of Rs. 4 per month and two annas six pies per day should be paid with retrospective effect from 1st December, 1939, to all employees of the Company drawing up to Rs. 100 per month and to daily wage earners respectively. The Company refused to accept these recommendations and announced their intention to give the allowances at the rates of Rs. 2 and one anna six pies per day respectively. The four Unions of the Company's employees refused to accept this offer and ballots were taken on the question of calling a general strike. On the intervention of Sir Gilbert Wiles, the Board of Directors of the Company decided, on 13th June, 1940, to raise these allowances to Rs. 3 and one anna nine pies per day respectively. The Unions concerned decided to accept this offer.

As far as the other Provinces in India are concerned, many far-sighted employers gave their workers dearness allowances as soon as they felt that conditions regarding the state of prices was such as to justify such allowances being given. This was done either on their own initiative or on a demand for relief from the workers. In many cases, however, no dearness allowances whatever were given. For example, such allowances have not yet (up To June 1941) been paid in any of the cotton textile mills in East and West Khandesh or in the Southern Mahratta Country of the Province of Bombay. The Government of Bombay appointed a Special Conciliator in a Dear Food allowance dispute between the Pratap Spinning and Weaving Mills and the Amalner Girni Kamgar Union at Amalner early in 1940 but he was not successful in securing any concessions from the management. Similar efforts at conciliation under the Bombay Industrial Disputes Act failed at Dhulia, Hubli, Gadag and Poona but the management in the last case, on the persuasion of the Chief Conciliator (Mr. D. S. Bakhle, I.C.S.), agreed to give a dearness allowance of one anna per head per day with effect from March 1941 but the representatives of the workers persisted in their demand for an allowance at the rate of two annas per head per day with retrospective effect from December 1939. The workers in the Poona mill consequently went on strike from 30th April 1941 and continued to remain out by the time we went to Press. The workers in all the cotton textile mills in East and West Khandesh gave notices to their employers during April and May 1941 demanding a dearness allowance of 40 per cent. The mills, on the other hand, served notices on the representatives of their workers at the same time intimating the proposed withdrawal of the increases in wages granted early in 1938 in accordance with the recommendations contained in the Interim Report of the Textile Labour Inquiry Committee. As there appeared to be little if any chance of a settlement of these disputes through conciliation and, as it also appeared likely

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that there would be a considerable amount of consequential hardship on the workers as the result of a continuance of these disputes, the Government of Bombay, in a notification dated 28th June, 1941, decided to refer these disputes to the arbitration of the Industrial Court under the powers given to them under the Bombay Industrial Disputes (Amendment) Act, 1941.

As far as Railway Employees are concerned, the Government of India in the Department of Labour appointed a Court of Inquiry under Section 3 of the Trade Disputes Act, 1929, in August 1940, in connection with a trade dispute between the Great Indian Peninsula Railway and its workmen regarding the grant of a dearness allowance. The Court consisted of the following persons: The Hon'ble Mr. Justice B. N. Rau, Kt., C.I.E., I.C.S., Chairman; Sir Shaffat Ahmad Khan, Member; and Mr. A. Hughes, I.C.S., Member and Secretary. The Report of this Court of Inquiry was published in February, 1941. After the publication of the Report, the Government of India announced their intention of extending the benefits of any decisions they reached on the dearness allowances to be paid to G. I. P. Railway employees to the employees of all State-owned Railways in India. The Court divided the territory covered by the G. I. P. Railway into three Zones: (1) Bombay to Kalyan; (2) Urban Areas; and (3) Rural Areas. The employees to be granted relief in these areas would be those whose monthly earnings fell under specified subsistence levels. These levels were fixed at Rs. 35 per month or below for the City area, Rs. 30 and below for urban areas and Rs. 25 and below for rural areas. The Court recommended that in each area, to all whole time adult employees whose earnings, including pay and allowances and the value of the free housing concession if any but not including overtime do not exceed the subsistence level for their area, a dearness allowance of Rs. 3 per month should be paid. Recommendations were also made for marginal adjustments in the case of those employees whose earnings were round about the maxima of the subsistence levels. Other recommendations included the opening of cheap grain shops, etc. As a result of discussions between the Railway Board and the All-India Railwaymen's Federation, the Government of India decided that dearness allowances should be paid on the following scales to all employees of State-owned Railways in India with retrospective effect on wages due for September 1940 and subsequent months: Bombay and Calcutta (including suburbs—Rs. 3 per month to those whose earnings amount to Rs. 60 per month and below; Selected Industrial Areas, that is, towns of over 100,000 inhabitants according to the 1931 Census—Rs. 2-8-0 per month to those on Rs. 50 per month and below; and Other Areas—Rs. 2 per month to those on Rs. 30 per month and below. It is understood that all Railway Systems in India have given effect to the decisions of the Government of India on the subject.

The Tata Iron and Steel Company, Ltd., gave a dearness allowance of Rs. 2-8-0 per month in August 1940 to those workers of their Iron and Steel Works at Jamshedpur whose earnings were below Rs. 75 per month. The Tata Steel Works union refused to accept this and a serious dispute was threatened. The Government of Bihar stepped in and, on 20th October 1940, appointed, under the Trade Disputes Act, 1929, a Board of Conciliation consisting of Sir Khaja Mohammed Noor, Kt., C.B.E., with Mr. S. K. Das as Secretary. This Board, whose Report was published in an Extraordinary Issue of the Bihar Government Gazette dated 11th January 1941, was successful in securing a settlement of the dispute between the Company and its workers on the following basis: Dearness Allowances to be granted on the following scales with retrospective effect from 1st August, 1940. To those earning Rs. 50 per month and below, Rs. 2-8-0 per month; over Rs. 50 and upto Rs. 75, Rs. 3 per month; over Rs. 75 and upto Rs. 100, Rs. 3-8-0 per month; and over Rs. 100 and up to Rs. 125, Rs. 4 per month. "Earnings" are to include all emoluments but not the profit sharing bonus.

We have so far given brief accounts of the official action taken in the matter of dearness allowances on Railways and in the more important industries in all Provinces in India. While it is obviously impossible to give here similar accounts of the hundreds of other disputes that have occurred on this question both in Bombay and in the other Provinces of India since the beginning of the War, we give below the scales of dearness allowances or increases in wages granted in some of the major industries both in Bombay and in other Provinces. Information regarding the action taken by Provincial Governments in respect of their own employees is also included wherever the information is available.

Government of India—

Government of India Employees: The Government of India have decided to dearness allowances to their own low paid employees in the various Provinces at the same rates and on the same conditions as those adopted by the Provincial Governments of those Provinces.

Bengal—

Government Employees: More than 66,000 persons in the employ of the Government of Bengal secured a dearness allowance of Re. 1 per month from February 1941. The allowance is paid subject to the condition that the price of the cheapest common rice in Calcutta must rise to 8 standard seers per rupee and must remain at or above that level for three months. This situation came into effect in February 1941.

Jute Industry: The Indian Jute Mills Association, after consultation with the Hon'ble the Labour Minister, announced on 16th November 1939, a general increment of 10 per cent., which was strictly to be regarded not as a war allowance but as a restoration of wage cuts made in the slump period about three years ago.

Calcutta Public Utility Companies: To workers drawing under Rs. 30 per month, Rs. 2, with the exception of the Oriental Gas Company which gave Rs. 2 to workers earning under Rs. 20 and Rs. 3 to workers earning between Rs. 20 and Rs. 30; Rs. 30 to Rs. 35—Rs. 3; the Calcutta Tramways gave Rs. 4 to workers earning between Rs. 51 and Rs. 74 and the Calcutta Electric

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Supply Corporation Rs. 4 to those earning between Rs. 50 and Rs. 96. In the former case earnings between Rs. 51 and Rs. 53 were to be made up to Rs. 53 and in the latter, earnings between Rs. 96 and Rs. 100 to Rs. 100.

Calcutta Municipal Sweepers : Sweepers getting less than Rs. 30—Re. 1.

Calcutta Shipping Companies : On 14th September 1939, Calcutta Shipping Companies gave a 25 per cent. increase in wages to Indian seamen employed on 12 months' foreign agreements, and later a further 25 per cent., as a War Bonus to compensate them for the increased risk to life and property when sailing outside Eastern local waters. This War Bonus was increased to 75 per cent. from September 1940, on 12 months' foreign agreements.

United Provinces—

Textile Mills : The local Mazdoor Sabha at Cawnpore convened a Dear Food Allowance Conference on 21st January 1940, to formulate the demands of the workers. On the eve of this Conference, the Employers' Association of Northern India notified their intention to grant dear food allowances on a graduated scale: workers in Jute Mills earning under Rs. 14 per month were to get two annas in the rupee; Rs. 14 to Rs. 18—1 anna six pies in the rupees; Rs. 18 to Rs. 24—one anna in the rupee; Rs. 24 and under Rs. 30—nine pies in the rupee; and over Rs. 30 to Rs. 75—half an anna in the rupee. Similar allowances but with a different grading of monthly earnings were to be given to workers in cotton and woollen mills in the Province.

Madras—

Government Employees : By virtue of a Resolution dated 18th November 1940, a compensatory cost of living allowance at a flat rate of one rupee per month is to be given to Government servants in receipt of pay not exceeding Rs. 40 per month in Madras City and Rs. 30 per month in mofussil centres, when the Madras City Cost of Living Index stands at 112 over a period of three consecutive months. It will be discontinued when the average of the monthly index figures for three consecutive months falls below 112.

Cotton Mills : One anna per day to male workers and half an anna per day to women and children.

Match Making Concerns : 6¼ per cent. to those earning less than Rs. 50.

Municipal Scavengers : Re. 1 per month.

Some Other Concerns : Re. 1 per month to those earning under Rs. 30 per month.

Central Provinces and Berar—

Government Employees : According to a notification dated 20th November 1940, a compensatory cost of living allowance at the rate of Rs. 1-8-0 per month will be paid to all Government servants in receipt of a pay of Rs. 30 per month or less if and when the aggregate price of the staple food grains at the Headquarters town of any particular District in the Central Provinces has been maintained for a period of two months at eight seers to the rupee or less.

Cotton Textile Mills : Full information regarding the dearness allowances paid to cotton mill workers in Nagpur has been given above. *Burhanpur*—Burhanpur Tapti Mills, Half an anna per head per day. *Akola*—Sawatram Ramprasad Mills: Dearness Allowance including restoration of wage cut—20 per cent. for those earning under Rs. 10 per month; 15 per cent. for those between Rs. 10 and Rs. 20; 12½ per cent. for those between Rs. 20 and Rs. 40; and 10 per cent. to those earning over Rs. 40 per month.

Collieries : A War Allowance of two annas in the rupee or 12½ per cent. of wages has been given in certain Collieries.

Punjab—

On 5th January 1940, Government invited leading industrialists of the Province to a Conference presided over by the Hon. The Minister for Development to discuss the wage situation created by the rapid rise in prices. It was considered that it was for industrialists to take action themselves before being compelled to do so by strikes and other manifestations of labour discontent. The meeting decided that it was as yet premature to take any steps to increase the wages of the workers. Since then several individual units have granted dearness allowances ranging from 6¼ to 18 per cent. of wages.

Delhi—

Cotton Mills : For workers earning up to Rs. 20 per month—a lump sum payment of Rs. 2-8-0; Rs. 20 to Rs. 40 (in one mill and Rs. 50 in another)—12½ per cent; Rs. 40 to Rs. 75 in one mill—Rs. 5 lump sum; Rs. 50 to Rs. 70 in another mill—7½ per cent.

Bombay—

Government Employees : The Government of Bombay have decided to grant a dearness allowance at a flat rate of Rs. 2 per month to whole time Government servants whose pay does not exceed Rs. 39 per month in Bombay City or Rs. 29 per month in the mofussil. Persons earning more than these figures but less than Rs. 41 and Rs. 31 per month respectively will be brought up to these figures. The allowance will be paid in any particular month throughout the Province if the Bombay Cost of Living Index, averaged over the three preceding months is 117 or more and will be discontinued if the average for three consecutive months falls below 117, the discontinuance taking effect only from the fourth month without retrospective effect.

Cotton, Silk and Woollen Textile Mills : Full details have been given above.

Bombay Municipality: Rs. 2 to those drawing Rs. 50 per month or less and one anna three pies per day to daily wage earners.

Thana Municipality : Rs. 4 to those drawing under Rs. 75 per month.

Ahmedabad Municipality : Rs. 2 per month under Rs. 30; Rs. 30 and over—one anna per day.

Poona District Board: Rs. 3 per month.

Bombay Port Trust : Same as Bombay Municipality.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bombay Gas Company : One anna and three pies per day in addition to the War Allowances paid during the first World War.

Oil Storage Plants : Rs. 3 per month in some concerns and two annas per day in some others.

Soap Factories : Two annas per day.

Times of India Press : Two annas per day.

Aerated Water Manufacturers : Rs. 2 per month (in some concerns).

Engineering Firms : Mostly round about 10 per cent. of pay.

Sind—

Government Employees : Government servants whose pay does not exceed Rs. 16 per month will be entitled to a grain compensation allowance of Re. 1 per month and those whose pay exceeds Rs. 16 but not Rs. 30 per month an allowance of Rs. 2 per month in any month when the combined price of rice and wheat in Karachi shows an increase of between 50 and 75 per cent. over the pre-war price of Rs. 3-14-0 per maund. When prices exceed 75 per cent. over pre-war prices the allowances in each category will be increased by Re. 1 per month.

Steamship Companies : One company gives 30 per cent. to all employees earning under Rs. 200 per month and 20 per cent. to those earning Rs. 220 per month and over. Those between Rs. 200 and Rs. 220 get allowances ranging from 27½ down to 22½ per cent. Another Company gives a uniform 20 per cent.

Flour Mills : 15 per cent. to those drawing under Rs. 30 and 10 per cent. to those drawing over Rs. 30 per month.

Assam—

Government Employees : All Government servants in receipt of a pay of Rs. 30 per month or less will receive an allowance at the rate of one anna in the rupee of their pay when the average price of rice for the Province rises from the pre-war average of 11 seers to 8 seers to the rupee and a second anna when it goes to 6 seers.

Oil Companies : From 1st May 1940 Rs. 3 per head per month in one company and allowances ranging from Rs. 1-8-0 to Rs. 4 per month, varying according to the cost of living, in another.

Tea Plantations : Dearness of food has been dealt with by grant of increased work and sale of rice at concession rates.

Orissa—

Government Employees : Grain Compensation Allowance at the rate of Re. 1 per month will be payable to all Government servants in the Province whose pay is Rs. 30 per month or less when the average retail price of rice in the Province for all headquarters and sub-divisional stations, as published in the Orissa Gazette, taken over three preceding calendar months, is dearer than nine standard seers to the rupee.

Bihar—

Tata Iron and Steel Works, Jamshedpur: Full details have been given above.

Collieries : Several strikes occurred during the year in the Jharia Coalfield in which the workers demanded an increase of wages, a dearness allowance, or a war bonus amounting to 30 to 40 per cent. above the pre-war level of wages. In view of the prevailing agitation for increased wages on the ground that the cost of living had increased, the Government of India with the concurrence of the Provincial Government and the coal industry appointed Mr. A. Hughes, I.C.S., late Commissioner of Labour, Bengal, as a Special Officer to make an inquiry into the changes in the cost of living due to war conditions in the Bihar Coalfields. This Report has been submitted to the Government of India but it has not yet been published.

A large number of employers both in the cotton textile industry in centres outside the City of Bombay and in the engineering and other industries in Bombay and in other industrial centres in India waited to see what action the Millowners' Association, Bombay, would take following the recommendations made by the Rangnekar Board of Conciliation. When the Bombay Millowners' Association announced their intention of paying a dearness allowance at a flat rate of two annas per head per day with retrospective effect from December, 1939, many employers in other industries fell into line and granted similar dearness allowances but the dates of the 'retrospective effect' varied. Some gave the allowance for a month back, some for two months and others for three months back. The general tendency in the grant of these dearness of food allowances has been to give a lump sum figure per month or per day in preference to a general percentage increase. The object of this is to benefit the more poorly paid workers and at the same time to give the necessary measure of relief to the better paid categories. The dearness allowances at the rate of two annas per head per day were to hold good until the Bombay Cost of Living Index number reached 123 and remained at that or at a higher level for three consecutive months when they would be subject to revision. When the Rangnekar Board made their recommendations (February 1940) the index stood at 112. In June 1941, the Bombay Cost of Living Index stood at 122. The Bombay Labour Office handled a large number of conciliation cases during the months of March to June 1941 in connexion with demands for increases in the rates of dearness allowances already granted. Many of these cases were prevented from resulting in strikes on the employers giving the assurance that they would fall into line with any action which the Millowners' Association, Bombay, would take in revising the existing scales when the upward margins recommended by the Rangnekar Board for revision were reached. It may be confidently anticipated that as soon as the Bombay Cost of Living Index touches 123 and remains at that or at a higher level for three consecutive months, considerable agitation for increases in the dearness allowances will arise. The publishers of the Indian Year Book have, therefore, given full information on this subject in order that employers may have sufficient data readily available to enable them to reach quick decisions so that serious dislocation of industry and interruption of work—specially for the war effort—may be prevented.

DEMAND FOR UNIFORM LABOUR LAWS IN INDIA.

In an earlier paragraph in this section we stated that with the advent of Provincial Autonomy in India with effect from 1st April 1937, many Provincial Governments had initiated widespread schemes for new labour legislation. It might have been expected that a certain measure of uniformity both with regard to the scope of the contemplated labour laws and the pace at which they were to be enacted would be observed at least in those Provinces where Congress Governments were in power. But, whereas the Congress Government in Bombay had placed two important enactments such as the Bombay Industrial Disputes Act, 1938, and the Bombay Shops and Establishments Act, 1939, on the Statute Book, no similar legislation had been passed in such other important industrial Provinces where Congress Ministries had been functioning as Madras, the United Provinces, Bihar, and Central Provinces and Berar. The impetus towards enacting measures to improve the lot of the working classes, as a result, differred in intensity from one Province to another and there were wide gaps between labour amenities in different parts of India. These disparities, it was recognised, must inevitably tend to weaken the competing power of those Provinces where labour laws placed greater restrictions and imposed heavier financial burdens on the employers. Responsible spokesmen of industrial interests in the country, therefore, gave frequent expression to their sense of perturbation at the lack of uniformity and consistency in the labour policies which were being pursued by the different Provincial Governments and all Associations of Employers in the country suggested to the Government of India the desirability of some action to ensure co-ordinated action in respect of labour laws. The Government of India felt that unco-ordinated labour laws and unequal labour conditions in different Provinces of India tend to depress conditions of labour all over, rather than to advance them, and that the unfortunate results of such unco-ordinated labour laws and conditions have been the migration of industry from one area to another and the development of industries in areas which are not normally suited for them but which attract such development merely because of absence of labour laws. They decided, therefore, that both from the point of view of labour as much as from the point of view of the capitalist it was necessary to co-ordinate labour legislation and with this end in view the Government of India convened a Conference of Labour Ministers from the Provincial and the State Administrations to be held in New Delhi in November 1939. Owing, however, to the resignation of the Congress Ministries early in that month, the Conference could not be held then and had to be postponed to January 1940.

First Conference of Labour Ministers—

This was the first Conference of its kind and was attended by representatives with advisers from the Government of India, all the Industrial Provinces in India and the Baroda and Gwalior States. The Hon'ble Sir Ramaswami Mudaliar, Member for Commerce and Labour, presided and the Hon'ble Sir Andrew Clow, K.C.S.I., C.I.E., I.C.S., Member for Communications and Railways, was also present. Dr. P. P. Pillai, Director of the International Labour Office, Indian Branch, and Mr. M. G. Srinivasan, Government Director of Industrial Concerns, Mysore, attended as observers. The agenda of the Conference covered the following subjects: (1) examination of existing labour laws such as the Factories Act, the Payment of Wages Act and the Trade Disputes Act with a view (*a*) to extend the operation of the first by making registration of all factories employing ten or more persons compulsory as against the present optional registration of such factories by Provincial Governments, (*b*) to amend the second in the light of its working during the last ten years, and (*c*) to make provision in the third for making all strikes and lockouts illegal until efforts had been made to secure a peaceful and amicable settlement of industrial disputes through conciliation, by arbitration or by the institution of an impartial inquiry the results of which would be accepted by both the parties to a dispute; (2) the desirability of extending "Shops" legislation to Provinces which had no laws on the subject; (3) the institution of schemes of sickness and unemployment insurance; (4) the regulation of hours of night shift work; (5) the granting, to industrial workers, of hollidays with pay; (6) provision of adequate industrial housing; (7) the collection of industrial and labour statistics; and (8) the recognition of trade unions and delegation of powers to Provincial Governments regarding unions whose objects are not confined to one Province. The conclusions reached at the conference were to be circulated to all the Provinces and Indian States for opinion and it was decided that questions relating to holidays with pay, extension of "Shops" legislation, granting of maternity benefits to women in mines, recognition of trade unions and the amendment of the Factories Act should be taken up for further discussion with a view to legislative action at the next Session of the Conference to be held in the following year. The Conference further agreed that Central Government undertakings in the Provinces such as Railways should be excluded from the scope of Provincial legislation but that in such undertakings the control of conditions of labour and the execution of power conferred by legislation should vest in the Centre. Regarding paid hollidays it was felt that paid hollidays should be given to workers deprived of weekly hollidays particularly in organized industries. The proceedings of the Conference have been published by the Government of India in Bulletin No. 70 of the Bulletins of Indian Industries and Labour, copies of which are obtainable at Rs. 1-4-0 each from the Manager of Publications, Delhi.

Joint Conference of Industrialists—

As stated above, the first Conference of the Labour Ministers had decided to circulate the provisional conclusions which had been reached to all Provincial Governments and administrations for opinion. These would in turn be circulated to all employers' associations for criticisms and comments. It appeared that as far as capital was concerned there should be a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

measure of unanimity in the opinions expressed by various employers associations in the different Provinces. With this object in view a Conference of Industrialists under the joint auspices of the Employers Federation of India and the All-India Organization of Industrial Employers was held in Bombay on 8th September 1940 under the Chairmanship of Sir Shri Ram to discuss the conclusions reached by the First Conference of Labour Ministers. The Conference was attended by representatives of about fifty organizations of employers and commercial bodies from almost all the important industrial centres in India. The Conference, while according its support to the principle of social and labour legislation aimed at improving the condition of the working classes, was of the opinion that (1) the Government of India should ensure that any measures undertaken should be on a strictly all-India basis including Indian States and Government undertakings both Central and Provincial; (2) the burdens imposed should not be such as adversely to affect industry; (3) due consideration should be given to the special difficulties confronting industries in India and to the burdens already imposed by existing or to be imposed by contemplated Central and Provincial taxation; and (4) when Labour Legislation of an all-India character is undertaken by the Central Government with a view to secure uniformity, Provincial Governments should be urged not to undertake legislation on the same or allied subjects. Regarding the subject of sickness insurance, the Conference generally agreed to the basic principles underlying the necessity for such legislation but they held that if such legislation was to be adopted in India the burden should not be placed on the employers alone and that both the State and Labour should contribute to the cost. legislation on the subject should be Central and it should apply to all important industries including Government undertakings, and similar legislation should be concurrently enacted in all Indian States. Regarding legislation for the prevention and settlement of industrial disputes, the Conference decided that the existing Central Act should be amended in the light of the experience gained during the last ten years and that pending such amendment no other Provincial Government should adopt legislation on the lines of the Bombay Industrial Disputes Act, 1938. The most important decision reached by the Conference was that the Government of India should appoint a Standing Advisory Council consisting of representatives of the Central and Provincial Governments, the Indian States and employers and labour to which all proposed Labour Legislation should be referred for criticism and opinion and that a convention should be established whereby the recommendations of this Council should ordinarily be followed by all Governments and States. The Conference discussed the subjects of holidays with pay and the recognition of trade unions but no decisions were reached.

Labour Member, Government of India, meets representatives of Employers and Labour—

A noteworthy step taken by the Government of India towards securing co-ordination in Labour Legislation in India was the decision reached by the Hon'ble Dewan Bahadur Sir Ramaswami Mudaliar, Labour Member, Government of India, to meet representative employers and Labour Leaders in two separate conferences to be held at Calcutta on the 5th and 6th January 1941, in order to discuss the Central Government's programme of new labour legislation in the immediate future. The agenda for the discussions covered the proposed amendment of the Trade Disputes Act, holidays with pay, extension of maternity benefits to women workers in mines, recognition of trade unions and legislation regarding shop assistants. The Labour Member first met the following delegation of the All-India Trade Union Congress on Sunday, 5th January 1941: Mr. V. R. Kalappa, President; Mr. N. M. Joshi, M.L.A., General Secretary; Dr. Suresh Chandra Bannerjee, ex-President; Dr. Charu Chandra Bannerjee; Miss Shanta Bhalerao; and Messrs. R. S. Nimbkar, S. C. Joshi, G. M. Khan, Selvapathy Chetty, K. S. V. Naidu and N. K. Bose. The following representatives of the Employers' Federation of India and the All-India Organization of Industrial Employers were interviewed on Monday, the 6th January 1941: Sir Homi Mody, K.B.E., the Hon. Mr. J. H. S. Richardson, Sir Vithal Chandavarkar, Mr. J. B. Ross, Mr. R. J. Griffiths, Mr. D. V. Bullock, Sir F. E. James, Mr. H. A. Wilkinson; and Mr. T. Maloney (Secretary) representing the Employers' Federation of India; and Sir Shri Ram, Mr. Kasturbhai Lalbhai, Mr. A. L. Ojha, Lala Padampat Singhania, Mr. B. M. Birla, Mr. Gurusaram Lal, Mr. Akhil Bandhu Guha, Mr. Karamchand Thappar and Mr. D. G. Mulherkar (Secretary), representing the All-India Organization of Industrial Employers. The discussions at both the Conferences were of a fairly general character. As was naturally to be expected the Labour Delegation asked for the maximum possible concessions to be made in the drafting of the proposed legislation whilst the representatives of the Employers' Associations endeavoured to tone down the proposals as much as they could. The two Conferences were, however, of considerable help to the Government of India as they enabled the Labour Member to strike at possible middle courses that would be acceptable to both capital and labour. Moreover, these Conferences placed Government in possession of the opinions of both sides which was necessary for the purposes of the Second Ministers Conference which was to be held at New Delhi at the end of January 1941.

Second Labour Ministers' Conference—

The Second Session of the Labour Ministers' Conference was held at New Delhi on the 27th and 28th January 1941 under the Presidentship of the Hon'ble Dewan Bahadur Sir Ramaswami Mudaliar, the Labour Member of the Viceroy's Council. In his opening address, the object of holding these Conferences was described by the President as three-fold: (1) the great importance of ensuring the healthy and peaceful development of industries, especially in war time; (2) consideration of the rapid growth of divergence in labour standards among the various political units of the country and the checking of the adverse economic consequences of such divergence on industrial development;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and (3) anticipation and examination of problems of readjustment of great magnitude and overwhelming importance which were bound to arise when the war was over necessitating co-ordination of effort and goodwill on the part of various interests. The Labour Member told the Conference that the time had not yet come when a Joint Industrial Council on the lines suggested by the Royal Commission on Indian Labour should be constituted but that the Government had decided to make a beginning in this direction by holding these conferences in order to pool experience and arrive at a measure of unanimity regarding the further enactment of labour laws. The Agenda for this Conference covered the question of the preparation of Bills for amendments of the Factories, the Trade Unions and the Trade Disputes Act and for legislating for the grant of holidays with pay and the payment of maternity benefits to women in mines. The extension of 'Shops' legislation to Provinces which had no laws on the subject and Sickness Insurance were also discussed. We give below a brief resume of the decisions which the Conference is reported to have reached on these subjects (the Official Report of this Conference not having been published by the time we went to Press):

1. *Amendment of the Trade Disputes Act.*—The Conference decided that this should aim at eliminating abrupt dislocations in industry by strikes and lockouts declared during or before conciliation. This could be done by laying down that in all cases before a strike or lockout is begun, two weeks' notice should be given to the other party as well as to the Conciliation Officers appointed by Government together with a statement of reasons for the action contemplated. It was not proposed to abolish strikes altogether but to provide institutional machinery for insuring industrial peace and averting hastily declared strikes and lockouts.

2. *Amendment of the Factories Act.*—It was decided that Section 5 of the Factories Act should be so amended that all factories employing ten or more persons would be notified as factories. It was also decided to add an additional provision in this Act prescribing that factory workers deprived of their weekly days of rest should be given paid holidays during the course of the year upto a limit not exceeding the number of days of which they were deprived.

3. *Holidays with Pay.*—The Conference decided that the Government of India should prepare a Draft Bill providing that workers in all non-seasonal factories should every year be given holidays with pay of at least six working days in addition to the customary holidays and that non-adult workers should get double this period.

4. *Amendmend of the Trade Unions Act for Recognition of Unions.*—It was decided that the Government of India should lay down, legislatively, certain basic conditions for recognition of trade unions by Governments and that once unions are recognised by a Provincial Government they should also be recognised by the employer or employers' associations concerned. It was held that membership of trade unions should not be restricted on communal or religious grounds. Details regarding the percentage of membership to total strength and the unions' rights and privileges would be left to be worked out by the Provincial Governments.

5. *Maternity Benefits to Women Workers in Mines.*—The Conference decided that coordination was desirable in the matter of maternity benefit legislation. The existing legislation shows considerable differences in the qualifying periods for which benefits are granted and in the rates of benefit paid. For the moment, however, it was decided to extend maternity benefits to women workers in mines.

6. *Extension of 'Shops' Legislation.*—We have given full details of the divergent character of the existing laws on this subject above under the heading of "Shops Legislation in India." The Conference decided that it would be its object to eliminate varying standards but for the moment, however, it decided that a weekly day of rest for shop employees should be enforced in those Provinces which had so far not adopted any legislation on the subject. And,

7. *Sickness Insurance.*—The Conference resolved that legislation on this subject should be postponed pending a necessary preliminary actuarial examination to be financed by Government and involving contributions from employers and workers was completed. Certain organized industries like the textiles, cement and steel were selected for the actuarial survey. The completion of such an inquiry would take eighteen months and it would be on the results of that inquiry that the details of the scheme would be eventually worked out. The Conference, however, made it clear that Government—both Central and Provincial—would not make any financial contribution to any scheme that might be evolved.

INDIAN LABOUR AND THE WAR.

With the advent of the entry of Italy into the war and the sudden and unforeseen collapse of France, it was certain that all parts of the British Empire would have to make super human efforts to place at the disposal of the Mother Country men, money and the sinews of war. The Government of India launched a gigantic scheme for the recruitment and the training of a huge army in India. This army had to be supplied with food, clothing and modern military equipment. Owing primarily to difficulties in obtaining the necessary freight for the importation of this equipment into India it was at once apparent that much of it would have to be produced in India itself. A Central Headquarters Department of Supply with Provincial Branches all over India was established, expert technicians were imported into the country and large scale production of all types and kinds of munitions of war was commenced. It was at once apparent that Indian Labour would have to be mobilised for the purpose. National Service Labour Tribunals were, therefore, constituted and huge schemes for the training of technical staff were initiated. We give below short notes of the chief measures taken by Government in this direction:

Creation of National Service Labour Tribunals—

With the object of taking power to require industrial undertakings, including mines, in India to release technical personnel for employ-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment in factories under the Crown or declared to be engaged on work of national importance, the Governor-General promulgated the National Service (Technical Personnel) Ordinance, 1940, on the 28th June 1940. The term 'technical personnel' includes persons employed in the capacities enumerated in the Schedule attached to the Ordinance. These are divided into three groups: (1) Managerial Staff; (2) Supervisory Staff; and (3) Skilled and Semi-skilled trades. The first includes Works Managers and all kinds of Engineers; the second, foremen, inspectors, chargemen and *maistries*; whilst the third group includes almost all occupations in the engineering, electrical, wood and chemical trades; photo-litho operators, process photographers, litho-graphers and litho-printers; rope workers, riggers and slingers; motormen and petrol mechanics; and bricklayers and brick moulders. All 'technical personnel' over the age of 18 and under the age of 50 are, under heavy penalties for default, liable, when called upon to do so, to undertake employment in the National Service.

The Central Government has power to declare any factory which is engaged in the production of munitions or other war supplies or in work which is likely to assist the efficient prosecution of the war to be a factory engaged on work of national importance and on the declaration of a factory as such it becomes a "notified factory."

The Ordinance gives powers to the Central Government to constitute for such areas and in such places as it thinks fit National Service Labour Tribunals to exercise such functions as have been assigned to them by the Ordinance. Each Tribunal is to consist of a Chairman and not less than two other members all of whom must be servants of the Crown; it has the right to associate with itself in its deliberations such other persons as it thinks fit. Every 'notified factory' has the right to apply to a Tribunal or to the Central Government for technical personnel. The main function of a Tribunal is, therefore, to find the necessary personnel for such notified factory. With this object in view, National Service Labour Tribunals have been given power to ascertain particulars of the technical personnel employed in all industrial undertakings, the suitability of such personnel for employment in national service and the capacity of the undertaking to release such personnel or any part thereof for such employment. In order to enable the Tribunals to discharge these functions they have been given all the powers of Civil Courts for enforcing the attendance of witnesses, production of documents, recording of evidence on oath, etc., and also wide powers of inspection and the carrying out of trade tests. The Tribunals can call upon the management of any industrial undertaking other than a notified factory to release such technical personnel as it may specify, direct persons listed as 'technical personnel' who are unemployed or are not already employed in a notified factory to undertake employment in the national service, direct such persons to submit themselves to tests of their technical skill and they can lay down the terms of service of such persons subject to such conditions as may be prescribed. Once a notified factory applies to a Tribunal or to the Central Government for technical personnel it is obligatory for such concern to take into employment such personnel as may be sent to it and on such terms and conditions as the Tribunal or the Central Government may direct. Appeals against the decisions of a Tribunal lie with the Central Government.

No person employed in any industrial establishment who is classified under one of the capacities included in the Schedule annexed to the Ordinance can leave his employment unless he has previously obtained the permission in writing of the Tribunal. Correspondingly, no employer in any industrial undertaking can discharge, dismiss or release any person so classified unless he has given 15 days' notice of such intention to the Tribunal.

Whereas a Tribunal can control the engagement of technical personnel by industrial undertakings in such manner as it thinks fit, the Government of India alone has the power to transfer technical personnel from one notified factory to another. Similarly, no technical personnel employed in a training establishment or in a technical post under the Crown can be discharged from or leave his employment unless the head of the establishment concerned has previously obtained the permission in writing of the Central Government. All employers in non-notified factories are compelled to reinstate men who may be returned to their original posts on the same terms as obtained when their services were first requisitioned but these may be modified or compensation given on and after appeal to a Tribunal.

Penalties of imprisonment up to six months and a fine up to Rs. 1,000 are provided for infringements of the Ordinance.

The names of the Chairmen of and the addresses of the offices of the nine National Service Labour Tribunals which have been so far constituted in the various Provinces in India are as follows:—

1. Bengal: W. A. S. Lewis, I.C.S., Dewar House, 13, Hare Street, Calcutta.
2. Bombay: D. S. Bakhle, I.C.S., Vithal Buildings, Mint Road, Bombay.
3. Madras: V. Ramakrishna, I.C.S., Office of the Labour Commissioner, Madras.
4. United Provinces (also for Delhi and Ajmer Merwara): J. E. Pedley, C.I.E., M.C., I.C.S., Office of the Labour Commissioner, Cawnpore.
5. Punjab (also for the North West Frontier Province): J. Slattery, O.B.E., I.P. (Retd.), Office of the Punjab and N. W. F. Province Joint Public Service Commission.
6. Sind (also for Baluchistan): M. A. Sayyid, M.A., LL.B., J.P., Sind Secretariat, Karachi.
7. Central Provinces and Berar: C. C. Desai, I.C.S., C.P. and Berar Civil Secretariat Building, Nagpur

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

8. Bihar and Orissa: S. N. Mazumdar, I.C.S., Office of the Labour Commissioner, Bihar, Patna.

9. Assam: J. N. Taluqdar, I.C.S., Office of the Controller of Emigrant Labour, Shillong.

A two-day Session of a Conference of Presidents of National Service Labour Tribunals was held at New Delhi on the 29th and 30th January 1941 under the chairmanship of the Hon'ble Mr. M. S. A. Hydari, C.S.I., C.I.E., I.C.S., Secretary to the Government of India in the Department of Labour, with a view to pool experiences and decide on the methods likely to lead to greater efficiency and utility of the Tribunals.

Technical Training Scheme—

The Government of India in the Department of Labour announced, early in 1941, a Technical Training Scheme designed to provide for the intensive training of 15,000 semi-skilled tradesmen required for the technical branches of the Defence Services and Ordnance and Munitions factories during the 12 months ending March 1942. Of the 15,000 men required, 7,000 are general engineering fitters, 2,500 turners, 1,500 metal machinists, 1,200 electricians, 550 blacksmiths and 400 tin and copper smiths. The scheme covers not only special technical institutions to be opened for the purpose but also to factories and workshops in any part of India so as to make the fullest possible use of existing institutions and workshops. The maximum duration of the courses will be one year to be reduced to nine months if necessary. Trainees are to be passed out as soon as they successfully get through the specified trade tests. They are to receive Rs. 25 per month if they are matriculates and Rs. 20 per month if they are not plus free medical treatment and they are to find their own board and lodging. When the trainees have passed the necessary trade tests, the Chairman of the National Service Labour Tribunal in the area in which the persons are trained, will decide in consultation with the Technical Recruiting Officer as to how the trainees should be disposed of.

Candidates for technical training under this scheme will ordinarily be selected by the National Service Labour Tribunals constituted for each Province and to whom application for participating in the scheme has to be made. No guarantee is given or implied that trainees will be provided with employment on the completion of their training. Each trainee will receive travelling expenses from his home to the training centre to which he is posted and also from the centre to the place of employment if he is selected for employment on the conclusion of his training. Every person selected for training has to enter into an undertaking to accept any employment that may be offered to him under the Crown either in India or overseas and the parent or guardian of such person has to give a further undertaking guaranteeing to refund all expenses incurred on his training in the event of his failing to carry out the undertaking.

Bevin Training Scheme—

In November 1940, Mr. Ernest Bevin, the British Minister of Labour, made a statement in the House of Commons regarding a scheme which he proposed to put into effect for training Indian workers in factories and workshops in England. The object of the scheme was to accelerate munitions production in India and, at the same time, to inculcate in the men an appreciation of British methods of industrial co-operation between employers and workers and the value of sound trade union principles. Details of the proposed scheme were published by the Government of India in December 1940.

Candidates for the scheme are to be chosen (*a*) from the working classes, preferably from among men of the Engineering trades, *e.g.*, fitters, turners, millers and grinders drawing wages of Rs. 40 to Rs. 60 per month; and (*b*) from among students of technical institutions; but, the number selected from the latter group is to be restricted to ten per cent. of the total. Candidates from the former group must have had experience of factory work and have given promise of intelligence and adaptability. Candidates may be married or single but they should be young and not below the age of 18, healthy, intelligent, able to read, write and do simple calculations and possess manual dexterity and some knowledge of English. Preference is to be given to persons who are likely to be adaptable to conditions in England and especially to those who are prepared to mix and are least likely to raise difficulties over food which is to be on the English style and not on a caste or communal basis. The selection of candidates is made by the National Service Labour Tribunals in consultation with the Regional Inspectors of Technical Training and large industrial employers including Railway Administrations. All selected candidates are to produce certificates of recent vaccination and to pass strict medical tests particularly to show that they are free from any kind of tubercular trouble.

The courses of training are to cover engineering occupations mainly, *e.g.*, fitting and machine operating and are to cover a period of six months which might be extended in particular cases. For the first three months the trainees are to work at special training centres where they are to receive elementary training and instruction in English and are to have time to become acclimatized. They are then to be placed in groups with selected employers in factories where they will receive training side by side with British workmen. For the first month after the arrival of a batch of candidates in England, they are to be accommodated in a hostel run on English lines under a carefully selected manager after which they are to be lodged with selected British families.

All selected candidates will receive travelling allowances (inter class fares plus Re. 1 per day for subsistence allowance) to port of embarkation and from port of disembarkation on return, free return passage and food on the journey to and from the United Kingdom, a subsistence allowance of Rs. 20 per month for the whole period of journey from home to England and back

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to home, the necessary warm outfit in India plus an allowance in the United Kingdom for the purchase of suitable clothing and while under training in England an allowance sufficient to cover the cost of boarding and lodging plus pocket money at the rates of eight and six shillings per week according as the candidate is over or under 20 years of age. In addition to the above, separation allowances of Rs. 35 per month will be paid in India to the families of married men.

On their return to India, the services of the trainees will be at the disposal of the National Service Labour Tribunals originally concerned with their selection and these Tribunals will decide how best their services can be utilised, but no guarantee of employment is given.

By the time we went to Press, two batches of 50 candidates each had been selected and forwarded to the United Kingdom—one in February and the other in May 1941. The first batch reached England in the beginning of May and were personally received by the Minister of Labour on arrival in London. Among the one hundred candidates so far selected, nineteen were from Bombay, seventeen each from Bengal and Madras, fifteen from the United Provinces, twelve each from 'Bihar and Orissa' and 'the Punjab, North West Frontier Province and Sind,' seven from the Central Provinces and Berar and one from Assam.

Attitude of Indian Labour towards War—

At a large rally of 100,000 industrial workers in the City and Suburbs of Calcutta held on 4th January, 1941, under the chairmanship of Mr. Jamnadas M. Mehta, M.L.A. (Central), resolutions pledging the support of Indian Labour to British workers in their struggle against Nazism and Fascism until the bitter end were adopted. Mr. M. N. Roy, addressing a monster anti-Fascist rally at Jamshedpur on 12th January, 1941, stated: "We shall be false to the international ideals of the labour movement if we fail to extend our helping hand to our British comrades in this moment of their great trial."

This concludes our historical survey of the growth of the Labour Problem in India. In this survey factory legislation and legislation in connection with payment of wages has been dealt with as exhaustively as space permitted. We now deal more briefly with other important phases connected with labour in India.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial countries of the world. As such she is entitled to a permanent seat on the Governing Body of the International Labour Organisation. In the memorandum prepared by the India Office of the British Government for the substantiation of India's claims as such the following figures were given to illustrate the industrial importance of the country:—

> "Twenty-eight million agricultural workers excluding peasant proprietors; 141,000 maritime workers, lascars, etc., a figure second only to that of the United Kingdom; over twenty million workers in industry, including cottage industries, mines and transport; railway mileage in excess of that in every country in the world except the United States of America."

The figures for the 1931 population census which revealed a total population of nearly 353 millions show that the number of agricultural workers had increased to nearly thirty-one and a half millions. This figure excludes cultivating owners (27 millions), cultivating tenants (34 millions), landlords (over three millions) and 'others' (six and a half millions). The number of earners plus working dependants in industry, trade, transport and mines amounts to twenty-six millions. Domestic servants number eleven millions. These figures, at the best, must be considered as estimates, because even to-day no reliable statistics are available in India to show approximately correct figures of the numbers employed in each branch of industry in India. There has been no famine or epidemic of any importance in India since 1931 and the growth in population is estimated at three to four millions per annum. According to the provisional enumeration of the figures for the 1941 Census, the total population of India is expected to exceed four hundred millions.

The statistics contained in the annual administration reports for factories and mines show the numbers of persons employed in factories and mines which are subject to the control of the Factories and the Mines Acts. As far as factories are concerned, it is known that there are thousands of small factories in India which are not subject to any control and no statistics are therefore available to show the numbers employed in such concerns. All that the annual factory statistics show are the numbers of factories which are controlled by the Indian Factories Act in any particular year and the numbers employed in such factories. With each expansion in the definition of the term 'factory' more existing factories come under control and are therefore included in the statistics. Such expansions mainly occurred in the years immediately following the passing of the 1891, 1911, 1922 and 1934 Acts, but since 1937 most Provincial Governments have made a wider use of the powers conferred on them by Section 5 of the Indian Factories Act, 1934, and have notified many small concerns as "factories," for example, nearly 700 small handloom concerns, printing presses and engineering workshops were notified as factories in the Province of Bombay during the year 1938. The following figures show the growth of the factory population in India during the last forty-four years:

Factory Statistics, 1894-1939.

Year.	Number of working Factories.	Average daily number employed.			
		Men.	Women.	Children.	Total.
1894 ..	815	275,806	53,127	20,877	349,810
1898 ..	1,098	334,594	60,603	27,532	422,729
1902 ..	1,533	424,375	85,882	31,377	541,634
1906 ..	1,855	546,693	102,796	41,223	690,712
1910 ..	2,359	624,945	115,540	52,026	792,511
1914 ..	2,936	746,773	144,157	60,043	950,973
1918 ..	3,436	897,469	161,343	64,110	1,122,922
1922 ..	5,144	1,086,457	206,887	67,628	1,361,002
1926 ..	7,251	1,208,628	249,669	60,094	1,518,391
1930 ..	8,148	1,235,425	254,905	37,972	1,528,302
1934 ..	8,658	1,248,009	220,860	18,362	1,487,231
1935 ..	8,831	1,360,131	235,344	15,457	1,610,932
1936 ..	9,323	1,400,210	239,875	12,062	1,652,147
1937* ..	8,930	1,427,103	237,933	10,833	1,675,869
1938* ..	9,743	1,481,914	245,099	10,742	1,737,755
1939 ..	10,466	1,498,218	243,516	9,403	1,751,137

* The figures for 1937 and onwards are exclusive of Burma.

"Adolescents" are a new class created by the Indian Factories Act, 1934, to cover persons between the ages of 15 and 17 who have not secured certificates of fitness for employment as adults and who must continue to be employed as children. In the above table, however, the figures for male and female adolescents which have been shown separately in the Factory Statistics for the years 1935 to 1939 have been included in the figures for adult males and adult women.

The average daily number of children employed in factories shows a steady fall since 1922. This is due to stricter administration and better inspection and certification after the passing of the Amending Act of 1922. As against 67,628 children employed in 5,144 factories, in that year, the number employed in 10,466 factories in 1939 fell to 9,403. It is noteworthy that the Millowners' Association, Bombay, reached a decision in 1922 that no children should be employed in any textile mill in Bombay City after that year. The following table gives the detailed factory statistics for the year 1939 by provinces and age and sex groups :—

Detailed Factory Statistics for 1939.

Province.	Number of working Factories.	Average daily number of workers employed.				
		Adult Males.	Adult Women.	Adolescents.	Children.	Total.
Madras	1,811	133,843	50,936	8,541	3,946	197,266
Bombay	3,120	390,817	70,597	3,706	920	466,040
Sind	324	20,526	4,252	176	41	24,995

The annual All-India reports give detailed figures of numbers employed, by age and sex groups, only for cotton spinning and weaving mills and for jute mills and not for the other industries. It is not possible, therefore, to give a table similar to the one above by industries. It is interesting, however, to observe that of the total numbers employed as given in the above table, 413,260 men, 63,516 women, 9,442 adolescents and 2,336 children were employed in cotton spinning and weaving mills and 256,847 men, 38,762 women, 3,324 adolescents and only 34 children were employed in jute mills. Out of the total number of 488,554 persons employed in cotton mills in British Provinces in India, 295,138 or 60·4 per cent. were employed in mills in the Province of Bombay and out of the total number of 298,967 persons employed in jute mills in British India, 281,229 or 94.07 per cent. were employed in jute mills in Bengal. The next most important factory industry is that of "engineering." This group covers engineering concerns proper, railway workshops, dockyards, metal ware factories, fine woodwork factories and saw mills, etc., and it covers between 25 to 30 per cent. of the total number employed in all factories.

MINING STATISTICS.

The collection of full statistics with regard to the number of persons employed in mines in India dates from 1924, that is to say, after the passing of the Indian Mines Act, 1923. The following table contains the statistics for the period 1924-1939 :—

Mining Statistics, 1924-1939.

Year.	Total number of mines which came under the Act.	Number of persons employed.		
		Underground and open workings.	Above ground.	Total.
1924 ..	1,804	167,779	90,498	258,277
1925 ..	2,011	168,554	84,303	253,857
1926 ..	1,897	189,371	70,742	260,113
1927 ..	1,992	196,341	72,949	269,290
1928 ..	1,948	197,398	70,273	267,671
1929 ..	1,732	199,908	69,783	269,701
1930 ..	1,669	191,915	69,752	261,667
1931 ..	1,471	170,638	60,144	230,782
1932 ..	1,281	151,924	52,734	204,658
1933 ..	1,424	153,942	52,565	206,507
1934 ..	1,675	170,820	58,561	229,381
1935 ..	1,813	189,263	64,707	253,970
1936 ..	1,973	199,917	69,676	269,593
1937 ..	1,925	195,554	72,304	267,858
1938 ..	1,953	223,984	82,276	306,260
1939 ..	1,864	223,486	81,858	305,344

MIGRATION.

The principal industry of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small territorial units. Thus, Delhi has 41 per cent. of immigrants and Ajmere Merwara 19 per cent. while Ajmere City itself has as many immigrants as natives. Immigration influences the population of India very little. The 1931 Census shows only 730,562 persons as born outside the country as against 603,526 in 1921. The total emigration from the country is estimated at a million during the decade 1921-1931. The most important inter-provincial streams of migration are those between Assam and the other provinces in India, particularly Madras and Bihar and Orissa. At the last Census, Assam showed a net gain of nearly a million and a quarter due largely to the influx of immigrant labour on plantations. The greatest loss was shown by Bihar and Orissa which suffered to the extent of 1,291,567 persons. As between British India and the Native States, the tendency prior to 1921 was for migration into British India but the position during the decade 1921-1931 was reversed. The most striking example of this in 1931 was Bikaner State which showed a net gain of 161,303. As far as labour is concerned, the greatest fluidity is to be found in Assam and the greatest immobility in Bihar and Orissa where 959 out of every 1,000 persons in the province in 1931 were born therein. Emigration of Labour from India is mainly to Malaya, Ceylon and Natal. Problems connected with the immigration of Indians into Ceylon have recently become very acute and we therefore deal with this in a separate section below. The Annual Report on the working of the Indian Migration Act for the year 1939 states that 2,000 skilled workers left Bombay for work overseas during the year. Skilled emigrants numbering 1,395 were repatriated to India by their employers during the same year.

In January 1940, the Government of India promulgated new rules designed to prevent illicit emigration of skilled workers from India and to protect the emigrants from malpractices. The rules apply for the present only to Bombay and provide for the compulsory licensing of passage brokers whose general business is to assist the emigrant to depart from India by booking passages. Recovery of the cost of recruitment from the prospective emigrant by the licensed broker is strictly prohibited.

METHODS OF RECRUITMENT.

One of the most difficult problems connected with industrial labour in India is the method followed for its recruitment. Minor variations in the method may be found as between industry and industry but the cardinal principle is the same in all industries and that is, recruitment through the medium of a recruiting agent, a *sardar*, a *mukkadam* or a jobber.

The methods by which the jobber or recruiting agent is remunerated by the employer vary. It is reported that in the Central Provinces labourers are purchased from private contractors at so much per head. In Bengal the recruiting agent receives a lump sum payment from which he pays his men and retains the balance himself. In the textile mills in the Bombay Presidency the jobbers receive fixed salaries and perquisites both in cash and in kind from the workers whom they recruit at the time of placement and also during employment. Recruitment through contractors is most prevalent in Burma owing to the scarcity of labour in that province.

The system of recruitment followed in the case of the better paid and the more skilled jobs —especially in the engineering industry and on railways—is different. Here also, recommendation by a foreman or a headman is an important factor but in most cases the recruitment is direct because the type of man required is generally available on the spot. On railways, a contract for a period of apprenticeship is almost always entered into. The terms of these contracts vary according to the types of apprenticeship. The periods of apprenticeship vary from two to five years according to the jobs for which the apprentices are trained.

As far as recruitment of the ordinary unskilled worker is concerned, the rapid industrialisation of many towns is creating a nucleus of permanent town dwellers and such of these as are out of employment have got into the habit of invading mill and factory gates in the mornings in the hope of securing substitute employment or of getting into a permanent vacancy. This labour is somewhat independent of the jobber but not entirely because they must keep in his good graces in order to continue in the employment which they are able to secure.

Existing methods of recruitment in Indian industries have received general condemnation on all sides and the Royal Commission on Indian Labour have devoted much space in their report to this question. For the guidance of employers, the Commission made the following recommendations :—

(*a*) Jobbers should be excluded from the engagement and dismissal of labour ;

(*b*) Whenever the scale of a factory permits it a labour officer should be appointed directly under the general manager. His main functions should be in regard to engagements, dismissal and discharge ;

(*c*) Where it is not possible to appoint a whole-time labour officer, the manager or some responsible officer should retain complete control over engagements and dismissals ;

(*d*) Employers' associations in co-operation with trade unions should adopt a common policy to stamp out bribery ;

(*e*) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision ;

(*f*) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to get back their old jobs on their return. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

In pursuance of the Royal Commission's recommendations in the matter, several large organisations in India have appointed special labour officers to recruit and to look after the welfare of the labour force and from such reports as are available it is gathered that the system wherever introduced has been an unqualified success. It may therefore be anticipated that appointments of labour officers will be more widely resorted to in the near future. The Bombay Millowners' Association, in anticipation of the Commission's recommendations in the matter instructed their affiliated mills in January 1930 to introduce wherever possible, a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. They also recommended the introduction of a system of granting discharge certificates to contain a complete record of a worker's service and to demand the production of such certificates before engaging new men. Messrs. E. D. Sassoon and Company, Limited, in 1933, introduced a system of decasualisation in connection with their substitute labour for the eleven mills which they control in Bombay City. Each mill makes a monthly estimate of the number of temporary men which it is likely to engage during the month and issues employment cards to the required number. These men present themselves at the gates of their respective mills every morning and substitutes are engaged only from such men as have had these employment cards issued to them. This system which is now known as the *Badli Control System* has been officially adopted by the Bombay Millowners' Association and is universally followed by all cotton mills in Bombay City under the supervision of the Association's Labour Officer. The Government of Bombay have suggested to all cotton textile mills in the Province of Bombay that they should adopt the *Badli Control System* as followed by the Millowners' Association, Bombay.

The Millowners' Association, Bombay, in March 1941, circulated all its member Mills that new recruitment should always be preceded by a reference to the employers in whose service the applicant was previously employed.

RECRUITMENT OF PLANTATION LABOUR FOR ASSAM.

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1908, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the provincial Governments in 1926-28 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide: (*a*) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the local Government; (*b*) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; (*c*) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately; (*d*) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other provinces; (*e*) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the grounds of health, unsuitability of the work to his personal capacity or for other sufficient reason; and (*f*) that in the event of the recrudescence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act, 1932, which was brought into effect from the 1st April 1933.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932.

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). Employers are prevented from recruiting otherwise than by means of certificated *garden-sirdars* or licensed recruiters. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. A married woman who is living with her husband may only be assisted to emigrate with the consent of the husband. Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer, the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15). Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Governor-General may determine for each year of levy. The cess is collected by the Controller by the sale of certificates of emigration. Every assisted emigrant has to be provided by the employing interest on whose behalf he was recruited with such a certificate. All particulars about the emigrant together with a running record of the details of his employment in Assam are given on it. Failure to provide a certificate is punishable with a fine which may extend to Rs. 500. The rate of cess was reduced by the Government of India from Rs. 5 to Rs. 3 from 1st October 1938. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on tea plantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and on the working of the Tea Districts Emigrant Labour Act after 1934.

A good state of affairs is shown to exist in Indian tea plantations in Assam according to the Annual Report on the working of the Tea District Emigrants Labour Act for the year 1939. The Province of Bombay continued to be an uncontrolled emigration area but notwithstanding this, 539 souls were recruited from this area during 1939. The total number of souls recruited during the year amounted to 28,871 as against 31,193 during 1938. By far the greater majority of these came from the two Provinces of Bihar and Orissa, *viz.*, 14,817 from Bihar and 8,937 from Orissa and of these, 12,233 souls were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

recruited at Ranchi and 3,924 at Sambalpur. Recruiting costs for the year were, on an average, Rs. 72-6-10 per adult and Rs. 55-0-4 per soul.

The total population of adult labourers working and not working on tea estates in Assam was 606,459 at the end of 1939 and of children 5641,47 making a total population of 1,170,606 as against 1,153,101 in the previous year. The average monthly earnings of men, women and children settled on the gardens amounted to Rs.7-15-3, Rs. 6-7-5 and Rs. 4-9-2 respectively in the Assam Valley and to Rs. 6-5-6, Rs. 4-5-6 and Rs. 3-2-2 respectively in the Surma Valley. In addition to cash wages, all estate labourers have the usual concessions of free housing, free fuel, free medical treatment, maternity benefits and the right of free grazing for their cattle. In addition to maternity benefit, some gardens also pay a special bonus of Rs. 3 to Rs. 5 for each child born. Rice is supplied at concession rates in some gardens. The birth rate was 35·10 against 21·74 deaths per mille as compared with 33·74 and 23·11 respectively in the previous year.

The tea garden population consists mostly of Hindus, Christians and Animists. The number of Muslims is insignificant. Proper facilities are given to the labourers for the observance of their respective rites and religious festivals in all gardens. Facilities for playing football, hockey and other outdoor games are also afforded by several gardens.

IMMIGRATION OF INDIAN LABOUR INTO CEYLON.

The estimated total population of Ceylon at the end of 1940 was 5,981,000. Of these about 800,000 or over 13 per cent. were Indians. The principal industries of Ceylon are tea and rubber and of a total cultivated acreage of 3,536,437 acres, 605,200 acres are under rubber and 559,237 acres are under tea. The number of Indian labourers and their dependants on estates on the 31st December 1940 was 688,179 comprising 457,369 workers and 230,810 non-workers. Of the workers 205,269 were men, 191,282 women and 60,818 children. The total number of estates employing 5 or more Indian labourers and paying acreage fees to the Indian Immigration Fund on the 31st December 1939 was 1,322.

The arrangements connected with the provision of assisted passages for labourers emigrating from India to estates in Ceylon are in the hands of the Ceylon Imigration Commissioner appointed by the Government of Ceylon under Rule 3 of the Indian Emigration Rules, 1923, with the approval of the Government of India. His headquarters are at Trichinopoly which is the centre of the areas from which most labour has been recruited for this purpose in the past. He is also the head of the Ceylon Labour Commission of the Planters' Association of Ceylon, this Commission acting in the nature of Contractors to the Ceylon Government for carrying out the necessary rules and regulations required under the Indian Emigration Act. His Assistants, employed as Assistant Commissioners, are also Inspectors of emigration to enable them to carry out the aforementioned Rules. These officers are stationed at Trichinopoly and at Mandapam Camp. Other officials connected with emigration to Ceylon are the Protector of Emigrants at Mandapam who is appointed by the Government of Madras, assisted by a Medical Inspector, and a Superintendent at Mandapam Camp who is the representative of the Ceylon Emigration Commissioner in this Place of Accommodation under the Rules and who also acts as Quarantine Medical Officer in charge of the Quarantine Camp.

The Ceylon Labour Commission Officers look after the welfare of all labourers throughout their journey from the various depots until their arrival at Mandapam Camp which is the Place of Accommodation. Here, working in co-operation with the Protector of emigration, all labourers are examined, registration papers, etc., checked; and throughout their stay at the camp all details regarding their general wellbeing such as feeding, issue of clothes and *cumblies* are supervised. During their stay, the labourers are registered by the Ceylon Government Labour Department and the Quarantine Authorities enforce the provisions regarding detention, medical examination, vaccination, disinfection and the treatment of ankylostomiasis. The Protector of Emigrants is the final authority on the despatch of labourers proposing to go to Ceylon and his orders and wishes are carried out—the efficiency of the work being dependent on satisfactory liaison being maintained. The labourers on leaving Mandapam Camp proceed to Ceylon under the escort of Ceylon Government Escort Peons who look to the safety of all such labourers until they arrive at their destination stations in Ceylon.

In October, 1936, a Commission was appointed with Sir Edward Jackson as Sole Commissioner to enquire into the question of restriction of immigration into Ceylon with particular reference to whether such immigration had caused or was likely to cause unemployment or other economic injury to the permanent position of the Island and whether any restriction or control beyond that already existing should be imposed on such immigration and, if so, what form such restriction or control should take. The report of the Commission was published in April 1938. The Commission's main conclusions were : (1) As long as it is necessary for Ceylon to rely on immigrant workers and as long as she can get them from India, the rise and fall of immigration will follow the same rule, however the total numbers may be affected by increased employment of Ceylonese; (2) So far from causing economic injury to the permanent population, immigrant workers made possible an economic and general advance which could not have taken place without them and of the benefits of which the great majority of the population, directly or indirectly, share to-day; (3) There is no evidence to show that there is undercutting on the part of Indians in wages. Even if such undercutting exists at all, it is not a considerable factor influencing employment; (4) In the case of estate workers the existing means of control of immigration are fully adequate to enable the numbers entering the Island to be restricted to any extent desired; (5) In the case of non-estate workers any attempt to restrict the immigration of workers from India would be attended with grave risk to the economic prosperity of the Island until there is adequate provision —and there is none at present—that there is sufficient indigenous labour adequate and efficient enough to take up work which has so far

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been done by the immigrants ; (6) Having regard to the fact that the causes of such unemployment as there is among indigenous labourers are mainly to be found in long established racial tradition, social habits and deep-seated prejudices and disabilities growing from the same roots, restriction of Indian Immigration will not help the employment of Ceylonese. The weapon of restriction used too soon will merely deprive the Island of labour essential to its needs ; (7) Restriction by means of quotas or the compulsory employment of Ceylonese workers without sufficient proof that an adequate number of Ceylonese labour is available for work which Indians do at present will only cause grave risk to the sources of employment; and (8) The main problem is very definitely not one of preventing the immigrant workers from driving the Ceylonese out of work, but a problem of how to enable the Ceylonese workers to do the work which the immigrant has so far made his own.

The Executive Committee of Labour, Industry and Commerce of Ceylon decided in June 1938 to recommend to Government the prohibition of immigration into Ceylon as a measure to relieve local unemployment. This decision ignored the Jackson Report which advised against this prohibition. In June 1939 the Government of Ceylon issued orders for the repatriation of non-Ceylonese daily paid labour who entered Government service prior to 1st April 1939. The first lot of workers to be dismissed under these orders were those who arrived in Ceylon after 1st April 1934. These orders and the action taken thereon were the subject of universal condemnation in the Indian Press and the Government of India took retaliatory measures by ordering a ban, on 1st August, 1939, on the emigration of all persons departing from India to Ceylon for the purpose of unskilled work. This ban prevented all unskilled labourers from leaving India for agricultural work in Ceylon, but from its inception certain exemptions were made with the idea of minimising hardship entailed by its sudden imposition and the consequent separation and disruption of family life. Throughout 1940 and up to the moment of writing the question of hardship caused to the individual Indian labourer by the use of this political weapon has received the close attention of the authorities concerned, and from time to time certain exemptions from the ban have been allowed with the object of minimising distress, but the wider political differences between the two Governments being still unsettled the ban has remained in force with little actual alleviation being experienced.

Following a suggestion made by the Government of Ceylon and accepted by the Government of India, a mission from Ceylon visited New Delhi in November, 1940, to discuss in informal conversations with representatives of the Government of India, matters outstanding between the two countries, and to explore and prepare the way for formal negotiations later on. The Ceylon delegation consisted of the Hon'ble Mr. D. S. Senanayake, the Hon'ble Mr. H. J. Huxham, O.M.G., the Hon'ble Mr. S. W. R. D. Bandaranaike, and the Hon'ble Mr. G. C. S. Corea. The Government of India were represented by the Hon'ble Sir Girja Shankar Bajpai, K.B.E., C.I.E., I.C.S., the Hon'ble Dewan Bahadur Sir A. Ramaswami Mudaliar, the Hon'ble Sir Alan Lloyd, C.I.E., I.C.S., Mr. G. S. Bozman, C.I.E., I.C.S., assisted by Mr. T. G. Rutherford, C.S.I., C.I.E., I.C.S., and Mr. A. Vittal Pai, O.B.E., I.C.S. The main subjects which it was agreed should come under discussion were : (*a*) the control of immigration into Ceylon ; (*b*) the dismissal of Indian daily paid workers ; (*c*) the question of Indian franchise and domicile ; and (*d*) certain restrictions on Indian rights and opportunities now imposed or sought to be contemplated. The exploratory talks broke down and the Conference failed in achieving any agreement owing to fundamental differences of opinion between the two delegations on the vital question of the status of the resident Indian population in Ceylon. The Government of India have prepared a special report on this Conference and copies of this are obtainable from the Government of India Press at New Delhi. It may, however, be of interest to observe that the conversations were bound to break down owing to the extreme views held by the members of the Ceylon delegation one of whom made the following observations at the beginning of the conversations : " We cannot absorb the full number of Indians in Ceylon. It is of course impossible to decide off-hand the particular quantum, but obviously the absorption of what corresponds to one-sixth of the total population of the country . . . . would undoubtedly lead to the possible result, as many of us see it, of the extermination of our own people. It is really becoming now a stark question of survival. Their (the Indians') absorbability, in the sense of all privileges being extended to the Indian population of Ceylon, must be so strictly limited as to prevent the dangers of that submergence which is going on very fast . . . "

Subsequently to the conversations the Government of Ceylon introduced two Bills in the State Council : (1) for the registration of all non-Ceylonese in the Island ; and (2) for the complete control of immigration into the Island. These Bills were passed by the State Council but at the time we went to Press no information was available as to the date or dates from which they would be brought into effect.

Full information regarding the economic position of Indians employed in tea and rubber estates in Ceylon together with statistics of migration into Ceylon are contained in the Annual Reports of the Agent of the Government of India in Ceylon. These reports are obtainable from the Manager, Government of India Press, New Delhi.

LABOUR IN INDIAN MINES AND THE MINES ACTS.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Act of 1935. The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for aboveground workers. No limits were prescribed for daily hours. A daily limit of 12 hours was imposed for the first time by the Amending Act of 1928 which was brought into effect from 1st April 1930. As a result of the recommendations made in the matter by the Royal Commission on Indian Labour and the adoption of the Draft Convention on Hours of Work in Coal Mines by the Fifteenth Session of the International Labour Conference in 1931, the Government of India passed The Indian Mines (Amendment) Act, 1935, which was brought into effect from 1st October 1935. The main provisions of the law regarding hours and conditions of work in Indian Mines as it now stands, are as follows :—

(*a*) No person is to be employed in a mine for more than six days in any one week.

(*b*) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day ; and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than eleven hours.

(*c*) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays, the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(*d*) The employment in any mine of children under fifteen years of age is prohibited.

(*e*) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

The Government of India promulgated regulations under section 29(*j*) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1939 and in all other mines with effect from the 1st July 1929. As the summary exclusion of women in the main coal fields would have resulted in a very serious dislocation in the industry, a principle of gradualness was laid down and it was prescribed that in mines in certain provinces women might still be employed underground up to 1939 provided that the total number of women so employed at any time in any mine did not exceed a gradually decreasing percentage of the total number of both men and women employed underground. The annual decrease was to be 3 per cent. in coal and 4 per cent. in salt mines. Women are, however, permitted to work in open workings and on the surface. The total numbers so employed amounted to 26,353 and 24,093 respectively in 1939 as against 29,212 and 24,077 respectively in 1938.

In view of the prevailing agitation in the coalfields in Bihar for increased wages on the ground that the cost of living had increased, the Government of India, with the concurrence of the Provincial Government and the coal industry, appointed early in the year 1940, Mr. A. Hughes, I.C.S., late Commissioner of Labour, Bengal, as a Special Officer to make an inquiry into the changes in the cost of living due to war conditions in the Bihar Coalfields. Mr. Hughes submitted his report to Government in August 1940 but we understand that this is being treated as a confidential document.

By a notification dated 6th March 1914, the Government of the Central Provinces and Berar appointed Messrs. A. Hughes, I.C.S., and G. L. Watson, I.C.S., to make an inquiry into the condition of mining employees in the coalfields of the Chanda and Chhindwara Districts of the Province. This inquiry was in progress when we went to Press.

Whilst dealing with Labour in Indian Mines it is of interest to note that Mr. J. S. Allen, President Elect of The National Association of Colliery Managers whilst speaking on the subject of the many strikes that had occurred in Indian Coalfields during the year 1940 at the 27th Annual General Meeting of the Association held early in 1941 said that one of the first essentials for the Labour employed in this industry was the establishment of a minimum living wage. Mr. Allen remarked : "Surely it is not impossible to evolve a scheme whereby each and every one of them would be satisfied that the capitalist was getting a fair return for his money and the labourer a fair wage for his work."

HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

Although some associations of employers such as the Indian Jute Mills Association and the Millowners' Association, Bombay, have made efforts during the last few years to secure a certain measure of standardization in conditions in the concerns controlled by their members, conditions of work and employment in Indian industry vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all-India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of four admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perennial factories of the Province of Bombay in 1934. These four reports cover (1) the engineering, (2) the printing, (3) the textile (cotton, silk, wool and hosiery) and (4) all the remaining perennial factory industries. It is true that these reports are of a somewhat limited character in so far as territory is concerned, but owing to the existence of innumerable variations, the reports are fairly indicative of conditions in the whole of India.

HOURS OF WORK.

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. Speaking broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The cotton textile industry in almost all centres works a uniform 9 hour day except in a few concerns which work a 9¾ or 10 hour day from Mondays to Fridays and a 5½ hours or 4 hour day on Saturdays. A recent development in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being. Messrs. E. D. Sassoon & Co., Ltd., in certain of their cotton Mills in Bombay City, have been working three shifts of seven hours each for the last six or seven years; but conditions in these Mills are highly rationalised: that is to say, more machines are allotted to each worker, siders being asked to mind two sides and weavers six looms as against the normal of one side and two looms. As far as the Jute Mill industry is concerned, the Indian Jute Mills Association entered into an agreement intended to protect and defend the trade of the Indian Jute Mills which came into force on the 15th March 1939 for a period of five years in the first instance. The hours of work are to be ordinarily limited to forty-five per week. If 75 per cent. of the signatories vote for reduction, the hours of work may be reduced to a minimum limit of 40 hours per week and if 51 per cent. of the signatories vote for an increase the hours may be raised to a maximum limit of 54 which may be exceeded only under extraordinary circumstances such as a cycle of prosperity or war. Under such conditions Mills with 270 looms are entitled to work up to 72 hours per week. If one unit in a "group of mills," *i.e.*, under the same management, does not work the full complement of hours allowable, it may transfer the unutilised number of hours of work to the other unit under the same management.

As a result of the outbreak of War, large orders were placed with jute mills in India for gunny bags for the purpose of being used as sand bags. All jute mills in India, consequently, started working a full 54 hour week and when even this proved insufficient, jute mill managements requested Provincial Governments to grant them exemptions from the provisions of the Factories Act relating to weekly and daily hours of work. Such exemptions were granted to all jute mills in the Provinces of Bengal, Bihar and the United Provinces. About the middle of the year 1940, however, the large orders for sandbags were nearing completion and owing to shortage of shipping similar orders were not likely to be forthcoming. The Indian Jute Mills' Association, therefore, with the approval of the Minister of Labour, Bengal, decided, in July, 1940, to reduce weekly hours of work in jute mills from 54 to 45. In the month of August stocks of heavy goods in the jute mills had increased by 2½ crores of yards and the Government of Bengal announced their intention to regulate the area under jute in accordance with the provisions of the Bengal Jute Regulation Act, 1940, in the interests of the growers themselves. By September the position had worsened and it appeared to be inevitable that a large number of heavy goods' looms would have to be 'sealed' with the consequential effect of throwing a large number of workers out of employment. In order, however, to prevent this the Indian Jute Mills' Association decided that the mills should work three weeks of 45 hours each and remain closed for one week. It was decided that in respect of the closed weeks, the mills should pay to all existing personnel, an allowance which, in the case of the lower paid workers, would amount to half of the wages they would normally earn, were the mills to work, and slightly less in the case of the more highly paid workers. In accordance with this decision all jute mills in Bengal are reported to have gone in for short time working from September 1940 to the end of March 1941 except during February when the whole month was worked. Since April 1941, jute mill have again been working fully at the rate of 45 hours per week. Hours of work in jute mills in Bengal have varied as follows during the last five years: 6th April 1936 to 28th July 1936, 50 hours a week; 29th July 1936 to 25th September 1938, 54 hours a week; 26th September 1938 to 19th February 1939, 45 hours a week (under Bengal Jute Ordinance); 20th February 1939 to 31st July 1939, 45 hours a week (under Agreement); 1st August 1939 to 16th September 1939, 40 hours a week (under agreement); 18th September 1939 to 4th November 1939, 54 hours a week (under Agreement); 6th November 1939 to 6th April 1940, 60 hours a week (under Agreement); 8th April 1940 to 1st July 1940, 54 hours a week. Since 1st July 1940, 45 hours per week with complete closure for one week out of every four during the months of September to December 1940, and during January and March 1941.

All the dock-yards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act as also do oil and sugar mills. Almost all

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

seasonal factories work a uniform 10 hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible to close on the local bazaar day. Most factories engaged in the production of munitions of war now work the maximum weekly hours permitted by the Factories Act and exemptions absolving factories from observing the Statutory regulations have been granted by all Provincial Governments to many factories. The "Statistics of Factories" compiled by the Government of India for the year ending 31st December 1939 for all factories subject to the Factories Act, 1934, gives the following summary table regarding hours of work in all factories in India :—

Percentage of factories in which normal weekly hours are :—

	Not above 42	Between 42 & 48	Above 48		Not above 48	Between 48 & 54	Above 54
Perennial.				*Seasonal.*			
For Men ..	5	22	73	For Men ..	26	11	63
For Women ..	10	17	73	For Women ..	34	6	60

In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change-over is so arranged that every workman gets a rest period of at least twenty-four continuous hours once in one week.

The hours of work in Indian Mines vary widely and range from 38 to 51 hours per week. The following table sets out the average hours worked per week in underground workings in some of the more important mining fields in India during the year 1938.

Mineral Field.	Overseers.	Miners.	Loaders.	Skilled Labour.	Unskilled Labour.
Jharia Coalfield (Bihar)	49	46	46	47	47
Raniganj Coalfield (Bengal)	51	46	46	48	47
Giridh Coalfield (Bihar)	46	43	43	46	46
Assam Coalfields	51	49	51	52	51
Punjab Coalfields	46	43	41	44	44
Baluchistan Coalfields	37	38	37	40	42
Pench Valley Coalfields (C.P.)	51	48	49	50	50
Central Provinces Manganese	49	48	..	49	45

In open workings and on surface the weekly hours are slightly higher.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermittent character, systems of two shifts of twelve hours each obtain but the work of the individual is so arranged as not to work each operative for more than 8 hours. As far as the hours of work of other classes of Railway servants are concerned, the Indian Railways Act, 1890, was so amended in 1929 as to empower the Governor-General in Council to make rules for the limitation of hours of work and of grants of a periodical rest to certain classes of railway servants. Under the new powers, the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These provide a 60-hour week for persons engaged in continuous work and an 84-hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other Acts such as in railway workshops, running staffs and watchmen, watermen, sweepers and gatekeepers whose work is both intermittent and of a specially light character are excluded from the operation of the Rules. The Report of the Supervisor of Railway Labour for the year 1939-40 states that all the Railways on which the Regulations in connection with Hours of Employment are now in force generally maintained a satisfactory standard in their application and took prompt measures to rectify the irregularities that were brought to their notice. The most important matter in which there were frequent differences of opinion between the Supervisor of Railway Labour and the Railway administrations was the classification of staff. In their natural desire to keep the expenditure low, Railway administrations are sometimes inclined to take a less liberal view and classify the staff as "essentially intermittent" when they should be "continuous" or exclude them altogether from the scope of the Regulations which should not be the case.

In addition to the organization created by the Government of India for supervision of Railway Labour there had existed another for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Conciliation work on Railways. With effect from the 5th December 1939, however, these two separate organizations were merged into one and an additional Deputy Supervisor of Railway Labour was appointed. The Head of the Department, whose headquarters have been fixed at Calcutta, carries out the duties of conciliation under the Trade Disputes Act, 1929, and is responsible for the proper administration of the Hours of Employment Regulations and the Payment of Wages Act, 1936, in so far as it affects Railways. The Deputy Supervisor of Railway Labour who is stationed at New Delhi is required to attend to the day to day duties of supervision under the Hours of Employment Regulations. Mr. Abbas Khaleli, I.C.S., is the Conciliation Officer, Railways and Supervisor of Railway Labour, and Chaudhry Naseer Ahmed, M.B.E., P.C.S. is Deputy Supervisor of Railway Labour. The total number of staff employed on class I Railways to which the Regulations were applicable was 505,314 on 31st March 1940.

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33⅓ per cent. over ordinary rates. On circulation of these proposals by the Government of India, most of the provincial Governments affected were of opinion that under the existing organisation of dock labour in India, legislation for the control of hours was not practicable owing to the insurmountable difficulties which would be experienced in enforcement. The authority of the Karachi Port were thereupon advised to try out an improvised method of decasualisation which would involve registration of all dock workers. Stevedore labourers have however, as a result of considerable agitation by their unions, succeeded in securing a reduction in their hours of work from 12 to 14 hours per day to nine to eleven hours per day.

As far as the industries not specifically dealt with here are concerned, the hours of work in the case of certain individual units may, by the standards of to-day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India has had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non-regulated industries and concerns.

HOLIDAYS WITH PAY.

The question of allowing industrial workers the right of having annual holidays with pay has recently become of international interest owing to the twentieth session of the International Labour Conference held in June 1936 having adopted a draft Convention on the subject of annual holidays with pay. The application of this Convention is of an exceedingly wide character and it is intended to cover almost every class and type of industrial and commercial worker. By virtue of Article 2 of the Convention, "every person to whom this Convention applies shall be entitled after one year of continuous service to an annual holiday with pay of at least six working days." The Indian Legislative Assembly by a resolution adopted on the 26th January 1937 decided that India should not ratify this Convention.

In India, holidays with pay are enjoyed only by a very small percentage of the population; but, owing to the preponderance, in numbers employed, of the workmen in Government and railway factories and in the factories owned by public and local bodies and public utility companies, the engineering industry in India easily outstrips all other industries in the leave with pay privileges which are enjoyed by its workers. The leave rules of different administrations vary widely, and different sets of rules are adopted not only for different classes of employees of the same administration but also for the same or similar types of employees, according to the dates when they first joined service.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules; and for the factories owned and controlled by the local Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece-rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus ten to twenty days casual leave in every calendar year. To cite an example of special leave rules for certain categories, reference may be made to daily rated workmen and piece workers in all ordnance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty years' service.

The leave rules for railway workshopmen who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. One big company-owned railway grants fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all workshop employees irrespective of a qualifying minimum period of service.

The information collected on the question of leave with pay by the Government of Bombay for the purposes of its General Wage Census in perennial factories in the Bombay Presidency showed that out of 221 engineering concerns in the Presidency, 72 employing 28,502 workers or nearly 60 per cent. of the total number employed grant leave with pay to most of their workers and that another 16 employing 6,800 workers or 14.09 per cent. employed in the industry grant leave with pay to certain categories only.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In cotton textile and jute mills certain categories of workmen on the mechanical and subordinate supervisory establishments are granted varying periods of leave in most units. Leave with pay to workmen is granted by a few large corporations such as the Burma-Shell Corporation, General Motors (India),Ltd., and the Tata Hydro-Electric and Power Companies, etc. More and more factories recognise the necessity and the advisability of granting some pay with leave every year. Just before we went to Press for this issue, Messrs. Lever Brothers announced their intention of granting 13 days' leave of absence every year with pay to all their 700 odd workmen in Bombay. Taking all Indian Industrial Workers as a whole, it would perhaps not be incorrect to say that barely five per cent. enjoy leave with pay privileges.

The question of "Holidays with Pay" for industrial workers in India was one of the items discussed at the First Conference of Labour Ministers held at New Delhi in January 1940. The general opinion of the Conference on this subject was that paid holidays should be given to workers deprived of weekly holidays and that some amount of paid holidays should be given to workers in organised industries. It was decided that the details as to what industries should be selected for the purpose, how holidays should be distributed over a period and whether they should be given at various times according to the needs of workmen could be looked into when the Bill on the subject was drafted. It was held that the need of co-ordination as between the various Provinces was obvious and the general concensus of opinion was in favour of Central rather than Provincial Legislation on the subject. The Second Labour Ministers' Conference held in January 1941 decided that legislation on the subject of holidays with pay should be on the basis that workers in all non-seasonal factories should every year be given holidays of at least six working days in addition to the customary holidays and non-adult workers double this period.

TYPES OF WAGE RATES AND ALLOWANCES.

Wage rates in the West are generally either consolidated hourly time rates or piece rates and the calculation of earnings from such rates is both simple and easy. Some progress has been made in India during recent years in the direction of payment of wages on the basis of hourly rates in a few large engineering concerns but this form of payment is very rare. The most common types of payment of time rates are daily rates or monthly rates; and, in some cases, where wages are paid weekly or fortnightly, weekly or fortnightly rates. The calculation of earnings from hourly or daily rates does not offer any difficulty except in the case of daily rates in concerns which work a short Saturday. In the case of monthly paid workers, sub-section (2) of Section 9 of the Payment of Wages Act, 1936, prescribes that the amount of deduction made from wages for absence from duty shall in no case bear to the wages payable to the employed person in respect of the wage period for which the deduction is made a larger proportion than the period for which he was absent bears to the total period, within such wage period, during which by the terms of his employment, he was required to work. In certain cases monthly rates are for the Hindu calendar month or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are, for a month of 208 hours, or for a 'book month' of so many complete weeks.

Calculations of earnings from piece rates offer no difficulty in cases where they are based on number of articles produced but they are exceedingly complicated in cotton weaving. Some mills pay on the basis of weight, others on length. The rates vary according to reed space and picks to an inch and are further complicated by allowances for different types of borders and dobby designs. Certain units, especially in the printing industry have task rates which are a combination of time and piece rates. Certain industrial concerns in India have introduced the Halsey Weir or the Bedaux point systems of payment.

The International Bedaux Company of New York and Amsterdam which is the largest organization of industrial consultants in the world extended its activities to India in 1936 with the founding of the Eastern Bedaux Company located at Construction House, Ballard Estate, Bombay. Comprising a staff of trained industrial engineers, the company provides an expert consultant service for all industrial problems of organization, costing and labour and equipment rationalization. Studies, by the Company, are at present in progress in 20 per cent. of the jute mills in Bengal as well as in 25 per cent. of the number of the cotton mills in Bombay City. Other fields of investigation include the Oil, Chemical, Cement and engineering industries, and in the present emergency Government have engaged the services of the Bedaux Company as advisers in the manufacture of armaments and munitions.

Allowances.—Very few industries in India today pay a consolidated wage. Wages are usually made up of two components; (1) a basic wage; and (2) a dearness of food or war allowance. The term "basic wage" should not be taken to indicate that a certain wage has been fixed or standardized by collective agreement or has any relation to a particular period of time. Apart from the cotton textile industry in Ahmedabad where the wages of siders and doffers in ring spinning were standardized in 1920 and the piece rates of weavers were standardized in 1937 and in Bombay where the Millowners' Association introduced a Schedule of Minimum Time Rates of wages for unrationalized occupations in 1934, there is very little standardization of rates in any centre of any industry in India. Wage rates vary widely between unit and unit and centre and centre in every industry. The "basic wage" is, therefore, some hypothetical rate fixed for an occupation by an individual unit in relation to some period of time of its own choosing. The amounts paid as *moghwari* or dearness allowances also vary widely between industry and industry but a certain measure of uniformity for the units of a particular industry in a particular centre are to be found in the cotton textile industry. The general

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tendency during the years 1935 to 1939 was to consolidate the basic rates and the legacy of the dearness allowances which had been paid during the world war of 1914-18 and for many years after the end of that war, but with the advent of the present war in September 1939, dearness allowances have again been reintroduced in almost all industries in India as a separate item.

PAY PERIODS AND WAITING PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district; and within the same establishment different classes of workers are paid for different periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *haptas* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly bases in sugar mills and tanneries. In the Tata Iron and Steel Works at Tatanagar where nearly 50,000 workers are employed wages are paid weekly to men on daily rates and monthly to those on monthly rates. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the provincial Governments and interested persons and bodies, on three different occasions within the last eighteen years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

Periods elapsing before Payment.—The 'waiting period' or the time which elapses between the end of the period for which wages are earned and the date of payment varied considerably as between industry and industry and between establishments in the same industry. The longest delays were associated with concerns which paid wages monthly and in some cases extended to as many as 30 to 40 days following the date on which wages fell due. The Payment of Wages Act prescribes that wages in all factories employing 1,000 or more persons must be paid within ten days and in factories employing less than 1,000 persons within seven days of the end of the period for which wages fall due.

SUPERANNUATION BENEFITS AND FINANCIAL AID.

The subjects which we deal with under this section are pensions, gratuities, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions.—All monthly and time-rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. Where permanent monthly paid workers on piece rates are admitted, the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent. of the amount of the monthly pension is permitted in certain cases. Outside Government concerns, pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

In July, 1940, the Hon'ble Labour Minister, Bengal, made a statement in the Bengal Legislative Assembly that Government had under contemplation the introduction of a system of pensions for jute mill workers. He stated that he had impressed upon the employers the desirability of granting pensions to workers and that many of them were in fact doing so. He would have further discussions in the matter with the Indian Jute Mills' Association and hoped that he would be able to come to a satisfactory arrangement with them. The Minister, however, pointed out that one great difficulty was the want of proper service records, and another was the fact that enormous difficulties were being felt in preparing them.

Gratuities.—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than nine years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

Digitized by Arya Samaj Foundation Chennai and eGangotri

Provident Funds.—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. Certain Government servants who by the terms of their contracts are not eligible for pensions are compulsorily required to subscribe to the contributory section of the General Government Provident Fund. In such cases both Government and the Government servant concerned subscribe one month's pay each per year to the fund. All pensionable Government servants except certain classes of industrial workers and menials have the option of subscribing to the non-contributory section of the fund, subscriptions to which vary from 12 to 30 pies to the rupee of income at the option of the subscriber. Very few industrial workers of Government, however, take advantage of this section of the fund mainly because, apart from the compound interest which his subscriptions earn, the worker does not stand to gain anything on his outlay. The Government of Bombay made subscription to the Government Fund compulsory for all its servants with effect from 1st March 1941.

In cases where large bodies of non-pensionable Government servants are brought under the operation of contributory provident fund schemes special funds such as the State Railways Provident Fund and the Indian Ordnance Factories' Workmen's Provident Fund, which are governed by special rules, are formed. Company owned railways have schemes similar to that for State railways. Whereas it is obligatory for most categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised, no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust; whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata electricity generating and distributing plants, the Bombay Electric Supply and Tramways Company, Ltd., and the Burma-Shell Corporation, to mention only a few of many, provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one-twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent. to 100 per cent. of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balances standing at the credit of their accounts in respect of their own subscriptions, and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

Co-operative Societies.—The co-operative movement has made very rapid progress in industrial establishments all over India during recent years, and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces. It is impossible to attempt even a brief summary of the movement here but a few details regarding one of the best of such societies would be of interest.

The Jackson Co-operative Bank on the B. B. & C. I. Railway is perhaps the biggest and the best managed co-operative credit society of industrial workers in India. During the year ending 30th June 1940 it had a membership of 38,362 with a share capital of Rs. 4.11 lakhs and a reserve fund amounting to Rs. 3.92 lakhs. It receives both fixed deposits and ordinary deposits in its savings bank branch. Fixed deposits for the year ending June 1940 amounted to Rs. 23.08 lakhs and savings bank deposits to Rs. 35.49 lakhs which, together with capital, gave the society a working fund of Rs. 70.73 lakhs for the year. The number of new loans issued during the year amounted to 15,400 and involved a sum of Rs. 53.23 lakhs. The bank has been declaring a 7½ per cent. dividend for the last five years. A special feature of the activities of the Bank is a scheme which it has introduced for redemption of debts. Members of the society who are in debt are encouraged to bring a complete list of their debts to the Bank which, with the assistance of the Staff Officer of the Railway, interviews all creditors and arranges with them to compound the debts for much lesser sums in return for ready payment. The total amounts so paid to members' creditors are treated as loans and recovered in easy instalments spread over 72 months. The Bank also contributes an amount of Rs. 10,000 annually to a special Staff Welfare Fund started by the railway administration at the instance of the Bank "to look after the welfare of the staff in general and of low paid staffs and their families in particular." Welfare centres which have been opened at various stations on the line render help by way of supplying milk to the children of the needy, by nursing the sick and by opening hygiene clinics. In commemoration of its Silver Jubilee, the Bank started a Silver Jubilee Benevolent Fund in 1938 out of its past accumulated surplus profits of Rs. 1,79,849 to which additions are to be made from future surplus profits. The sole object of this fund is to ameliorate distress among the widows and children of deceased members drawing a salary of Rs. 80 per month or under who may be left in indigent circumstances. As a further step towards amelioration of the conditions of the low-paid staff the Bank waives recoveries from the sureties of defaulting borrowers in case the borrower and his sureties are menials.

Grain and Cloth Shops.—Cheap grain shops were opened by many large industrial establishments all over India during the period of the World War in 1914-18 and were continued for some years after the end of that War owing to the prevalence of high prices. With the fall in prices the majority of these shops disappeared. Prior to 1936 when the Payment of Wages Act was passed many cotton textile mills had cheap cloth shops for the benefit of their workers. The Payment of Wages Act, however, prohibits employers from making deductions from wages or from receiving payments from their employees for purchases from employers' shops. This is in accordance with one of the main cardinal principles of Truck legislation which was originally intended to prevent employers from forcing their workmen to buy articles from their own shops at fantastically high prices. A few Provincial Governments in India have, however, notified cheap grain and cloth shops as "amenities" in respect of purchases from which employers may make deductions from wages. In all such cases both the qualities of the articles sold in such shops and the prices charged for them are controlled by the 'prescribed authority' who is usually the Chief Inspector of Factories. As a result of the outbreak of War in September 1939, the Government of Bombay started many cheap grain shops in Bombay City. These have been continued since then as increasing sales thereat show that they continue to serve a real need of the public. Grains and sugar are purchased by the Controller of Prices on the lines indicated by the Purchase Sub-Committee appointed by the Consultative Committee constituted by Government to advise the Government and the Controller in the matter of price control. The grains and sugar are bought at wholesale prices and are sold without any profit except for a small addition to cover the working expenses of the shops. During the year 1940, the Government of Bombay approved of a scheme for the opening of cheap grain shops in the Surat District by the Surat District Co-operative Purchase and Sales Union and guaranteed half the amount of the loss which might be incurred during a period of six months, subject to the maximum amount of Rs. 2,000. Half the amount of the loss incurred by the Union on the shops was paid by Government as assured. Although other Collectors of Districts were advised to introduce similar schemes in their jurisdictions, no shops had been started in any other Districts up to 15th June 1941.

One of the most successful and effective measures introduced by many large factories and industrial establishments for the protection of the interests of the workers against the increased cost of living brought about by war conditions was the timely establishment of cheap grain shops in factory compounds for the sale to workpeople of food grains and certain necessities of life. The most notable action in this field was that taken by the Millowners' Association, Bombay, which recommended all its member mills in Bombay to take immediate action to open shops in mill compounds for the sale, on credit, of food stuffs and other necessaries of life at rates which would protect their workers' cost of living. The articles which included four varieties of rice, *pattni*, wheat, bajri, jowari, gram, turdal, urid-dal, mung-dal, wheat flour, sugar, tea, chillies, salt, cocoanut and sweet oil, ghee and bar soap were to be sold at fixed and uniform prices corresponding to the retail bazaar prices prevailing in August, 1939. In order to ensure that the privilege was not abused by the workers it was suggested that the monthly purchases by a worker should be limited to 40 per cent. of his earned wages or Rs. 15 a month whichever was less. Sales would be made on credit and the amount would be deducted from the monthly wages of the workers on the following pay day. Qualities were standardized, handbills bringing these shops to the notice of the workers were widely circulated and price lists were broadcast so as to enable the workers to appreciate the full benefits of purchasing from these shops. Arrangements were made for bulk purchases from wholesale dealers in order that the lowest possible prices might be obtained and that the quality of the goods stocked might conform to the standards maintained by the Association. By the beginning of 1940, fifty mills in Bombay had established cheap grain shops. Following a recommendation of the Rangnekar Board of Conciliation in the matter, the price policy of the mill grain shops was changed from the "pre-war" to the "cost price" basis. During the four months ending May, 1941, sales from the shops established in mills in Bombay have averaged to over half a lakh of rupees per month, the number of workers taking advantage of the facility amounting to nearly 20,000. Further expansion of the benefits of these shops is difficult owing to the fact that large numbers of workers are in the clutches of the grocers with whom they have hitherto been dealing. These grocers not only give their customers long term credits but also act as money lenders. Needless to say that the rates of interest and prices charged are exorbitantly high.

The Industrial Court, Bombay, in its award on the Dearness Allowance Dispute referred to it under a joint agreement or "submission" entered into between the Ahmedabad Millowners' Association and the Textile Labour Association, Ahmedabad, decided that cost price grain shops should be started for cotton mill workers in Ahmedabad. The cost of management of these shops is to be included in the price at which the articles are sold. The running of the shops is to be supervised by a Joint Committee consisting of two representatives each to be nominated by the two Associations. This Committee is empowered to decide the following questions: (*i*) the number and location of the shops; (*ii*) the qualities of the articles to be supplied by the shops; (*iii*) the prices to be fixed for these commodities; (*iv*) the extent to which each worker should be entitled to avail himself of these facilities, etc. The Joint Committee, may, if it so desires, refer any point in connection with the administration of these shops for the decision of the Industrial Court. Eleven shops in all were opened by the Millowners' Association in different localities in Ahmedabad but these were not well patronised and the result was that they were working at a considerable loss. The Ahmedabad Millowners' Association, therefore, filed an application in the Industrial Court towards the end of the year 1940 praying for a suitable direction for a recovery of the loss of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Rs. 1,465 incurred on the running of these shops. The reason for the loss was stated to be due to the fact that the Government of Bombay, on an application made to them by the Ahmedabad Millowners' Association in the matter, refused to grant permission under the Payment of Wages Act, 1935, for deductions to be made from wages in respect of articles sold from these shops on credit. As a result, sales had to be effected only on a cash basis. The Industrial Court gave no direction in the matter and advised the parties to compose their differences through the medium of the Joint Committee. For the reasons stated and also due to the extensive rioting which occurred in Ahmedabad in May 1941 these shops are now reported to have ceased functioning.

Loans and Advances.—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers local Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last fifteen years. Early in 1926, the Government of India asked all local Governments to make enquiries, in their respective administrations, into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The Government of Bombay conducted an extensive enquiry into the subject in the Bombay Presidency and as a result of their investigations came to the conclusion that abuses sufficient to justify legislative action for their control were prevalent. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of recommendations in the matter. The Payment of Wages Act, which has already been dealt with in an earlier section, was passed in 1936, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. Indian employers state that it is inherent in the Indian workman to make frequent changes in his employments and also to resort to frequent abstentions from work. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied; but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1940 were: Ahmedabad 3.90, Bombay 9.04, and Sholapur 12.20—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

Under the Payment of Wages Act, every employer in every Industry to which the Act has been applied is required to draw up lists specifying the acts or omissions for which fines will be inflicted. These lists have to be approved by such authorities as the Local Governments may prescribe and are required to be prominently displayed in all places where the employees concerned are working. Apart from this employers were not required to draw up any Standing Orders or rules of conduct governing the conditions of employment between them and their employees, and with the exception of the industrial establishments conducted by Government or Public Bodies such as Municipalities and Port Trusts and the Cotton textile mills affiliated to the Bombay Millowners' Association, very few employers in India had framed Standing Orders for operatives. The Bombay Industrial Disputes Act 1938, however, requires every employer in an industry to which the Act is made applicable to submit a draft for such Standing Orders to the Commissioner of Labour within two months of the date of the application of the Act to any industry; and the Commissioner of Labour is empowered to "settle" such standing orders after he has consulted all the interests concerned in the industry. Appeal against the orders of the Commissioner of Labour lies with the Industrial Court constituted under the Act. In accordance with these provisions, the Commissioner of Labour, Bombay, settled the Standing Orders for Cotton mill operatives in Bombay, Ahmedabad, Sholapur and other centres in the Province of Bombay in September and October 1939. Appeals against most of these Orders were filed with the Industrial Court both by individual employers and associations of employers and by Trade Unions and individual workers. These

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

appeals were heard by the Industrial Court in November 1939 and the Court, after hearing the parties, settled a new set of Standing Orders which it directed should come into force on and from 12th December 1939. Copies of these Standing Orders can be obtained from the Secretary, The Industrial Court, High Court, Bombay. Since the beginning of 1940 many employers all over India have drawn up Standing Orders for their operatives on the lines laid down by the Industrial Court, Bombay.

INDUSTRIAL HOUSING.

Residential buildings in all countries are constructed from the point of view of investments from which their owners hope to receive a fair interest on their capital outlay. No country in the world expects its landlords to be philanthropists in the matter of providing rent-free or cheap rented housing to such of her people as cannot afford to pay the economic rents which are asked for; and although every Government must be expected to provide decent housing for its own low paid servants, the world has not yet reached that socialistic stage where Governments are expected to provide adequate housing for whole populations. At the same time, however, low paid wage earners in crowded and congested industrial areas can hardly be expected to be able to afford the economic rents demanded by the landlords. In such cases there can be only two alternatives: wage levels such as will permit workmen to pay such rents as are asked for or the provision of adequate housing by the employer. The first does not appear to have received much consideration at the hands of industrial employers in India. The second is a lament which has been recited by almost every Commission and Committee that has been appointed in India during the last 25 years to the point of satiation; and although several benevolent and far-sighted employers have endeavoured to provide housing for their workpeople a very small percentage indeed of the total industrial population of India is housed by the employer and the question of industrial housing continues to be one of the most vexed questions of the country.

The pioneer work in the field of industrial housing has been done by the railways which have spent nearly forty crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by the late Lord Lloyd, then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls situated at Naigaum and Sewri and at DeLisle Road are in fair demand but the majority of the tenements at the Worli chawls continued unoccupied owing to a complaint by the workers that they were situated at considerable distances from their places of work and that the locality offered few of the amenities of city life. The Congress Ministry in Bombay, however, decided to carry out certain improvements in these chawls in order to make them more attractive and comfortable to live in. It was decided to incur an expenditure of ten and a half lakhs of rupees for this purpose of which a sum of four and a half lakhs was to be spent during the year 1938-39 and the remainder in 1939-40. The Municipalities of Calcutta, Bombay, Cawnpore, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low-rented tenements for other classes of industrial workers. Perhaps the most magnificent schemes of industrial housing conceived in India are those launched by the Tata Iron and Steel Company Ltd. at Jamshedpur and by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. The Tata Iron and Steel Company has laid out the town of Jamshedpur on Garden City lines, and constructed over 8,000 houses of different types for its employees, and has now a further extensive programme of housing construction in hand. In 1939, 7,900 employees were housed. The capital cost of town buildings put up by the Company up to 31st March 1940 was about Rs. 135 lakhs. The Company has furnished all quarters carrying a rent of Rs. 15 a month and above with electric lights and fans and has decided to electrify even the lowest rented quarters within the next two years. The Company grants loans on liberal terms to its employees for building houses on land leased to them. In 1923, the Empress Mills, Nagpur, obtained from the Government on lease for 27 years extensive land in a locality known as Indora and constructed a Model Village with up-to-date sanitary and other conveniences for its operatives where each worker could own or rent a cottage for himself. Two sizes of plots each measuring 53′ × 36′ and 53′ × 45′ are allotted and not more than one-third of the area is allowed to be built upon. Two types of model houses have been built by the mills, houses on the smaller plots costing about Rs. 960 each and those on the larger plots Rs. 1,500 each. Most houses are provided with their own flushed latrines and water taps are laid on in all the houses. Some of the houses built by the Mills have been sold to the workers who pay the cost by easy instalments covering a period of 5 to 7 years while some have been rented to them. Many houses have been built by the workers themselves on plots of land sub-leased to them with moneys advanced to them on easy terms. A large number of the houses have their own gardens and a big garden has been provided in the middle of the Settlement. The Settlement has been provided with good roads, street lights and playgrounds which are equipped with swings, shoots, etc., for children. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided housing for fair percentages of their total staffs but the majority of textile workers in India are not housed by their employers.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing, or where it is necessary for special reasons to provide quarters for certain classes of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

staff near to their work. These principles appear to be generally followed by private companies and concerns as well, especially by coal mine owners in Bihar and Orissa and by tea planters in Assam. All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coal fields has to be licensed and licenses are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. In Assam, all residential employees on tea estates are provided with rent-free quarters in barracks or 'lines' as they are called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible. Almost all sugar factories provide housing for their employees because the factories are located near large sugarcane plantations. Large slum clearance programmes have been drawn up by Municipalities and Improvement Trusts in almost all the larger towns and cities in India and much useful work has been done in the last five years by acquisition and demolition.

Royal Commission's Recommendations.—The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. One of the most important of these was to amend the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers' dwellings. The Government of India have passed the necessary legislation to amend the Land Acquisition Act in the manner suggested.

Rest Shelters, Dining Rooms and Canteens.—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rest shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this little effort has been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West. Pioneer work in this direction has been done by Messrs. E. D. Sassoon & Co. in Bombay. This Company which manages eleven large cotton mills in the City has established large canteens in all their mills. The management in each case bears the salaries of staff and the on-cost for equipment; and hot meals are supplied to the workmen at actual cost. The Company has also established a hostel for boarding and lodging its poor women workers. The charges are exceedingly moderate and vary from Re. 1-8-0 per month for a child to Rs. 6 for an adult. In May, 1939, the Millowners' Association, Bombay, recommended to all its member mills that they should establish canteens with the help of the Indian Tea Market Expansion Board. The suggestion was adopted by a member of mills and permission to make deductions from the wages of workers on account of canteen coupons sold to them was granted by the Chief Inspector of Factories, Bombay, on the understanding that the canteens were run on a non-profit basis. A large number of mills in Bombay have now started such canteens and substantial surpluses are being built up especially in those mills where no rents or interest on loans are charged. The Association has now decided that after certain charges for depreciation and reasonable rent have been met, the surpluses realised should be spent for general welfare work, *e.g.*, provision of milk and biscuits for children in creches, installation of cold drinking water facilities in the departments, health exhibitions, recreation club equipment including books, journals, a radio set, etc. The Tata Iron and Steel Company maintain eight restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. The Company has its own plant for the manufacture of ice and soda which are provided free of charge to the employees in the works. A women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge. Communal factors such as the religious prohibition of Hindus to eat their food in the company of members of other communities, want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult; they are much more so in a country like India where the solution of the problems associated with physical health and social environment is complicated by the evils of ignorance and poverty to which is commonly added a fatalistic outlook arising, it may be, from the low standard of living which has been the experience of so many generations past. Climatic conditions, highly insanitary housing conditions and the illiteracy of the people also contribute to recurring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The wide-spread prevalence of malaria in certain congested areas of the Provinces of Bengal, Bombay and Madras is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets; and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-treating small ponds and pools of stagnant water, malaria still continues to take a big toll of human life. *Beri-beri* and tuberculosis in Bihar and Orissa, *kala-azar* among the jute workers in Bengal, ankylostomiasis in South India and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts. *Kala-azar* has been steadily gaining ground in Bengal within recent years and the figures for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the quinquennium 1932-36 show that the number of cases treated in the medical institutions in Bengal rose from 105,840 to 137,791. The mortality recorded from this disease during 1936 was 68 per cent. above the average for the previous ten years.

The Annual Report on the working of the Indian Factories Act, 1934, for the year 1939 states that the health of the factory employees in all Provinces was generally good and there was no epidemic except in Bengal and Bombay. In Bengal, there were cases of malaria, cholera, small-pox and influenza during the year. There was an epidemic of malaria in the workers' colony of the Indian Iron and Steel Works at Hirapur and anti-malarial work was undertaken under the direction of the Director of Malarial Research of the Tropical School of Medicine. In Bombay, the medical aid rendered by the mills was most useful in helping to combat the severe malaria epidemic that occurred during the year. Sanitary arrangements were on the whole satisfactory. In Bombay, the disposal of trade waste at Ahmedabad is still an unsolved problem. In the Central Provinces and Berar, the water from paddy soaking tanks in rice mills continues to cause nuisance in the neighbourhood and the standard of cleanliness in oil mills leaves much to be desired.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nominal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfecting; the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work; the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased; the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker; the provision of suitable and sufficient lighting; the provision of adequate supplies and sources of water both for drinking and for washing; and for the maintenance of sufficient latrine accommodation separately for male and female workers. Remarkable progress has been recorded during the last three years with regard to the installation of air conditioning and cooling plants; progress in this direction was hitherto confined mostly to spinning and weaving sheds but since 1939 expansions have been made in other departments as well by installing large hoods and trunks harnessed to powerful exhaust fans, to enable the steam to be drawn away from sizing cylinders. Attempts are also being made to reduce dirt to a minimum and many cotton mills have installed special plants to carry the dust away.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of local Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trusts also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments in India—cotton and jute mills, mines, engineering workshops, tea plantations, etc.—maintain fully equipped dispensaries in charge of whole or part-time qualified medical officers.

In October, 1939, the Government of Bombay constituted two Industrial Health Advisory Boards for the Cities of Bombay and Ahmedabad respectively. Mr. Gulzari Lal Nanda was appointed Chairman of both these Boards. Other members included prominent medical officers, Government Labour Officers, Executive Health Officers of the Municipalities concerned, representatives of Millowners' Associations and Labour Unions, prominent social workers and persons having some knowledge of health conditions of industrial workers in the Province. The main function of these Boards is to advise the Labour Welfare Department in all its health activities. In August, 1940, the Bombay Board requested the Millowners' Association, Bombay, to co-operate in a scheme for a systematic medical examination of workers at the cost of the employers with a view to showing the extent to which individual workers were suffering from any disease or deficiency and for the taking of steps to provide necessary relief. The Association, however, felt that where health and physical condition were deficient, medical or other treatment was a natural corollary. Most mills in Bombay had already provided adequate medical facilities and the Association therefore did not see the necessity for incurring additional large scale expenditure for this purpose.

It is of considerable interest to observe that the Municipality of Bombay initiated a scheme in the year 1939 for the free distribution of milk to undernourished children attending Municipal Schools in the City of Bombay. A sum of Rs. 50,000 was sanctioned for this purpose in the budget estimates of the Municipality for the year 1939-40 and this was increased to Rs. 90,255 in the estimates for 1940-41. All children entering

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Infant Class for the first time were examined and those that were found to be suffering from malnutrition were given 6 ounces of milk every day free of charge. 2,373 children were in receipt of this benefit when the scheme was started in March 1939. The number of children who were in receipt of the benefit as at 28th February, 1941, was 5,288. It is reported that the scheme proved highly successful because the children under milk ration showed remarkable improvement in height, weight and general nutrition. Owing to financial stringency, however, the Municipality of Bombay was compelled to abandon this scheme with effect from 1st March 1941.

Maternity Benefits.—A Bill introduced by Mr. N. M. Joshi in the Legislative Assembly of the Central Government in 1924 to provide for the payment of maternity benefits in certain industries was thrown out by the Assembly in August 1925, but the Governments of Bombay, Bengal, Madras, the United Provinces, the Central Provinces, Sind, Ajmer-Merwara and Delhi in British India and Mysore, Baroda, Bhavnagar and Indore among Indian States have passed their own maternity benefits Act. Bills for this purpose have been introduced in Assam and Hyderabad. At the Second Conference of Labour Ministers held in January 1941 it was decided to extend the benefits of this legislation to women working in mines. The Bombay Act was amended in 1934 in such a way as to be of greater benefit to the persons concerned. Under these Acts, all women workers employed in factories are to be compulsorily rested for three to four weeks before child birth and for four weeks after child birth and employers are required to pay them a benefit amounting to about half their usual pay during this period. During the year 1938, the Government of Bombay extended the operation of their Maternity Benefits Act to women employed in all industrial concerns in the Province. The Bombay Municipality started a maternity benefit scheme for its *halalkhore* and scavenging women in 1928. By this scheme, the classes benefited receive a benefit of leave on full pay for a period not exceeding 42 consecutive days. In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During periods of advanced pregnancy and after child birth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at child birth is often granted in addition. This bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company and the Assam Oil Company grant six and three months' leave respectively on half pay. Several estates in the Coimbatore District of the Madras Presidency either pay lump sum bonuses in lieu of pay or feed the women concerned for a few weeks before and after confinement. Planters in Madras decided, early in 1939, to pay a bonus and bear charges in connexion with the free feeding of the mother for periods of three weeks each before entry into and after leaving hospital. Provincial Factory Administration Reports for the Bombay Presidency record that the Bombay Maternity Benefit Act is having a restrictive influence on the employment of women in factories, particularly in Ahmedabad.

Provisions of Crèches.—One of the many additional principles introduced in factory legislation in India by the Indian Factories Act of 1934 was one for the compulsory provision in all factories wherein more than fifty women workers are ordinarily employed of a suitable room for the use of children under the age of six years belonging to such women and for the supervision of the children in such rooms (or crèches) in accordance with rules to be framed by local Governments in the matter. Crèches are, however, not a new feature in Indian industry. Many textile mills in Bombay, Ahmedabad and Sholapur have provided them for over fifteen years and in many of these the children were looked after by qualified *dais* (Indian midwifery nurses) and were clothed and fed at the expense of the millowners. The Government of Bombay had also made provision for the adequate supervision of these crèches by the appointment of a lady Inspectress of Factories as early as 1924 and the result of her labours has been that there were nearly a hundred first class crèches in cotton textile mills in the Province of Bombay on 1st June 1941. Crèches were also provided by several textile mills in other centres and in the factories attached to many of the larger tea plantations in Assam.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one; and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised "safety-first" campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. Under the direction of the Railway Board of the Government of India all railways in India have undertaken extensive schemes of safety-first propaganda. These include the putting up of safety posters and safeguards both in English and in the vernacular of the district at all prominent points and places; the free issue of illustrated booklets on accident prevention; publication of special articles with photographs in railway magazines; addresses and magic-lantern lectures; and the organisation of special safety-first committees in the larger workshops. The Millowners' Association, Bombay, has done considerable good work of a pioneering character in connection with Safety-First. In conjunction with the Factory Department and the Bombay Millowners' Mutual Insurance Association it has posted attractive safety-first posters in all cotton mills in Bombay City. In conjunction with the St. John's Ambulance Association it started classes in 1931 for first aid training. These are attended by large numbers of workers from many cotton mills in the city. Working in conjunction with the Safety-First Association of India, the Association drew up a Safety Code for the Cotton Textile Industry and this Code was published

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and put into operation from August 1940. In Co-operation with the Labour Welfare Department of the Government of Bombay and the officials of the Khatau Makanji Mills, a safety film for the textile industry was prepared and this has been exhibited in the various Government welfare centres and in some mills in Bombay. The Safety First Association conducted several courses to train persons in Air Raid Precaution. In the Central Provinces and Berar fire drills were systematically carried out in a few large concerns. Many large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and the Tata Iron and Steel Works at Jamshedpur, to mention only a few, are with railways, pioneers in the field of organisation of 'safety-first' measures. It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1939. Factory Departments in all Provinces in India do all they possibly can in improving safety measures in factories. As a result of these endeavours, automatic or fixed guards have been provided in metal stamping and pressing machinery in Bombay; special attention was paid to the breaking of overhead belts in the Central Provinces and Berar; safety locking devices were suggested to the makers of machines in the Punjab; and the importance of wearing tight-fitting clothing by the workers was impressed on factory managers in Madras, Sind and the United Provinces. During the year 1939 special attention was paid to hazards connected with 'roll formers' or 'Autocoils' fitted to carding machines, can tamping motions on drawing frames, the starting and stopping of calendering machines. In Bengal, in spite of the lack of fencing material, improvements in jute mills in the direction of securing minimum standards in process-machinery fencing was substantial. Safeguarding of machinery in cotton and rice mills, tea, engineering, sugar and other small miscellaneous factories continues to receive due attention.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (*i.e.*, accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act.

The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a local Government, even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Prior to the passing of the 1934 Factories Act, some of the local Governments had framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing over 500 operatives. Section 32 (*b*) of the 1934 Act, however, makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by local Governments in the matter.

The All-India Factories' Report for the year 1939 states that the number of recorded accidents increased from 33,494 in 1938 to 36,006 in 1939. Fatal and minor accidents increased from 210 and 27,220 to 221 and 29,948 respectively, but serious accidents fell from 6,064 to 5,837. The incidence of all accidents per 100,000 operatives rose from 1,927 to 2,056 during the year under review. The increase has been attributed to better reporting, expansion of industrial activity, longer working hours with the attendant fatigue and longer exposure to risk and employment of persons unused to the hazards of their work.

UTILISATION OF THE WORKERS' LEISURE.

The Industrial Disputes Committee (the Stanley Reed Committee), appointed by the Government of Bombay in 1922 to enquire into the causes of the wide industrial unrest prevalent about that time and to make recommendations, were, *inter alia*, of opinion that employers should organise extensive schemes of welfare particularly with regard to the proper use of workers' leisure, in order to keep the workmen both contented and happy and out of mischief. In pursuance of the Committee's recommendations in the matter several cotton mills and groups of mills in the Bombay Presidency—notably the Currimbhoy Ebrahim group of mills, the Sholapur Spinning and Weaving Mills and the Tata Mills—inaugurated wide schemes embracing facilities for education and recreation. All these groups formed special welfare institutes and placed them under the charge of special welfare officers. Much good work was done but with the depression in trade which followed coupled with the financial difficulties in which many of these mills were involved most of the excellent schemes that had been established were either severely curtailed or abandoned. During the last few years, however, many large groups of employers in the cotton textile industry in India have inaugurated wide schemes of welfare work for the benefit of their employees. Among the more prominent of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

these groups those that deserve special mention are the Buckingham and Carnatic Mills in Madras, Messrs. E. D. Sassoon & Company who are the Managing Agents for eleven mills in Bombay, the Empress Mills at Nagpur, the Gokak Mills at Gokak and the Elgin Mills at Cawnpore. The pioneering work in the field of recreational facilities is being done by the railways. All railway systems have established sports clubs and institutes at suitable distances and places for the recreation of their employees. The railways provide land, buildings and equipment and the Institutes are run by the members themselves from their own subscriptions. In certain cases separate club houses and institutes are provided for officers, for non-gazetted Europeans and Anglo-Indians and for Indians and in a few cases for the lower types of workmen as well. All forms of sports and recreation are indulged in at these institutes and railway hockey and football teams are among the finest in India.

Almost all the larger labour employing organisations such as the Bombay Port Trust, the Burma Shell Corporation, the bigger municipalities, the Tata Iron and Steel Works at Jamshedpur, the British India Corporation in the United Provinces, the Empress Mills at Nagpur, etc., have devised wide welfare schemes and in many cases these are under the charge of special welfare or labour officers. In some cases grants-in-aid are given to such outside organisations such as the Young Men's Christian Association, the Kirkee Education Society, the Social Service League, etc., to take charge of certain sections of welfare activities particularly with regard to recreation and the education of both workers and workers' children.

With the advent of Provincial Autonomy in India, the Governments of several Provinces have taken active measures to supplement the welfare and recreational activities undertaken by employers for the benefit of their workpeople by initiating large welfare schemes of their own. The Governments of Bombay and the United Provinces took the lead in this direction by setting aside sums of Rs. 1,20,000 and Rs. 10,000 respectively in their budget estimates for the year 1938-39 for "industrial welfare." The amounts provided for this purpose in the estimates for the years 1939-40 and 1940-41 were Rs. 1,00,000 and Rs. 20,000, and Rs. 1,77,600 and Rs. 30,000 respectively. The allotments for Bombay included sums of Rs. 20,000, Rs. 59,000 and Rs. 45,000 for the years 1938-39, 1939-40 and 1940-41 respectively for the purpose of building recreation centres. For the current year, *i.e.*, 1941-42, a sum of Rs. 1,38,900 has been sanctioned for the Government Welfare Department in Bombay and a sum of Rs. 30,000 for the activities of the similar department in the United Provinces. Labour welfare activity by the Government of Bengal in past years consisted mainly in giving grants-in-aid to schools, libraries and day nurseries catering exclusively for labourers. Following the lead given by Bombay and the United Provinces in the matter, the Government of Bengal have also made an provision of Rs. 20,000 in their budget estimates since the year 1939-40 for the financing of welfare centres. In the Central Provinces, a proposal submitted by the Labour Sub-Committee of the Provincial Congress Committee for a Labour Welfare Scheme to be run by Government as an experimental measure is reported to be under the consideration of Government. In Bihar, a certain amount of welfare work is undertaken by the Jharia Mines Board of Health. The Government of Sind have now decided to start two welfare centres in predominently labour localities in Karachi.

The first beginning in Bombay was made by Mr. Ramnath Podar, Managing Director of the Toyo Podar Mill, who contributed a sum of Rs. 25,000 for the building of a recreation centre at DeLisle Road in Bombay City. This centre started functioning in March 1939. Government Welfare Centres in the Province of Bombay are divided into four types: "A," "B," "C," and "D" according to the type and extent of the activities provided and the times at which they are open. The scope of the work in the "A" type centres is of a very comprehensive character and covers almost all forms of outdoor and indoor recreational activities; periodic cinema and dramatic performances and *bhajan* parties; the running of reading-rooms, libraries, canteens and restaurants; the organisation of debates, magic lantern and other lectures and many types of educational classes; the provision of radios, add a-grams, nursery schools, medical aid and advice in health and maternity, etc. The "A" type centres are open from 8-30 to 11 in the mornings and from 5 to 9-30 in the evenings for men and boys and from 1 to 4 in the afternoons for women but the nursery school section supervised by a full time lady teacher is open at each centre from 8 a.m. to 5 p.m. The "C" type centres are open from 7-30 to 10-30 a.m. and from 6 to 9 p.m. for men and boys and a limited sphere of activity in holding of literacy and sewing classes and the conduct of indoor games for women is conducted from 1 to 4 p.m. Two additional full-fledged "A" type centres at Worli and Naigam started functioning from 1st June 1940 and a total number of ten "C" type centres were opened in various other localities in Bombay City during the financial year 1939-40. The activities in the "C" type centres mainly cover indoor recreation and reading rooms. The "D" type centres will only cover outdoor recreation and the Municipality of Bombay has consented to place at the disposal of Government ten open spaces in Bombay City for this purpose. One recreation centre has been opened in Ahmedabad and an "A" type centre is to be opened as soon as the recreation pavilion which has been promised to the Department by the Municipality of Ahmedabad is handed over to it. Four "C" type centres at Sholapur and one at Hubli have already been started and efforts are being made to select a suitable site for starting an "A" type centre at Sholapur. It is the intention of the Government of Bombay to extend these welfare activities so as to cover all the industrial areas of the Province. Mr. E. J. S. Ram has been appointed Labour Welfare Officer and Miss P. G. David, Lady Welfare Worker. These two Officers are assisted by a large staff of both full time and part time men and women welfare officers. The whole scheme is under the personal direction of Mr. Gulzarilal Nanda who is the Honorary Commissioner for Amenities to Industrial Labour.

The Government of the United Provinces have opened six welfare centres in Cawnpore and one

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

each at Lucknow, Hathras and Firozabad. Each centre provides facilities for free medical aid, a reading room and library and some indoor and outdoor games. Each centre is in charge of a full time staff consisting of an organiser, an assistant organiser, a medical officer and a compounder. The doctor visits patients at home free. Arrangements have been made with the Indian Tea Market Expansion Board to run a tea stall at each centre where the workers are served tea free of charge. The Tea Board has supplied a Radio and an add-a-gram to each centre. As in Bombay, cinema and dramatic performances are held periodically and debates, lectures and literacy and sewing classes are held as a regular feature of a Centre's activities. "Better Living Societies" have been organised at each welfare centre and these have been registered under the Co-operative Societies Act. These societies are autonomous bodies with properly elected managing committees and their function is to help to clean up the *ahatas*, settle individual disputes and develop personal hygiene by means of talks, lectures and debates. Apart from the main labour welfare centres, a number of libraries and reading rooms have been established in important labour *mohallas* for the convenience of workers.

In the last three years the Government of Bengal have opened thirteen welfare centres in localities inhabited by industrial workers in the City of Calcutta and Howrah. The administration of these centres is at present in the hands of the Labour Department but Local Advisory Committees have been formed to associate the local people with the administration of the centres. It has not yet been possible to undertake any extensive programmes of work at these centres the activities of which at present are confined to running day schools for workers' children, night schools for adult workers, day nurseries for babies, reading rooms and libraries and the organising of lectures on health and hygiene and other matters of topical interest. It is proposed to open more labour welfare centres in the industrial areas round about Calcutta and to revitalize the existing centres through direct and personal contact of labour officers. In addition to the present activities those contemplated include gymnasia, indoor and outdoor games, cinema shows, installation of radio sets and the organising of volunteer corps for social work.

It is of interest to observe that whilst presiding at the annual general meeting of the Employers Federation of India held in Calcutta in December, 1940, Mr. J. H. S. Richardson, speaking on the policy which employers should follow in connexion with worker's welfare said: "Whilst we must resist all extravagant demands and attempts to impose burdens on industry which it cannot bear we must steadfastly pursue a policy of greater and greater regard for the welfare of those whose labour produces the goods which forms the foundations of the edifice of the industry."

As far as education is concerned, the railways are again pioneers in the facilities provided both for the education of their illiterate staffs and for the children of different classes of railway employees. The N. W. Railway has started three experimental schools for adult workers in the locomotive sheds at Lahore, Sibsur and Kotri. The experiment is confined to locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway has provided nearly 40 schools for the employees of the operative department. The B.B. & C.I. Railway have six schools for imparting instruction in the three R's and as an inducement to study a bonus of Rs. 5 is paid to each man passing a simple test. With regard to the children of railway employees, in addition to about 100 schools for European and Anglo-Indian children, all the railway systems in India maintain a total of nearly 170 schools for Indian children at a cost of nearly three lakhs of rupees per annum. These schools are attended by over 20,000 children. The Railway Board also gives grants amounting to about Rs. 50,000 per annum to aided schools for Indian children. These are attended by 10,000 children of Indian railway employees.

In Bombay, the Municipality has introduced compulsory education in all the wards of the City. The Social Service League maintains several night schools and a Textile Technical Institute at Parel for imparting practical and theoretical training to actual mill workers. The Bombay Y.M C.A. also conducts several night schools.

COST OF LIVING AND STANDARD OF LIFE.

COST OF LIVING.

Bombay was the first Province in India to compile and publish figures for measuring the cost of living. A monthly cost of living index for working classes in Bombay City compiled by the Bombay Labour Office on the aggregate consumption method with July 1914 as the base was regularly published in the *Labour Gazette* from September 1921 to June 1937. The scope and method of the compilation of that index are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. A base prior to the World War of 1914-18 has, however, recently come to be regarded the world over as being somewhat out of date for this purpose and several countries have been compiling cost of living index numbers in relation to a later year. Most of these index numbers are now compiled with weights which are proportional to the relative expenditure on the different items which find a place in an average worker's family budget. The Labour Office of the Government of Bombay conducted a comprehensive family budget enquiry in Bombay City between September 1932 and June 1933 and taking the prices during the year ending June 1934 as a basis it commenced the publication of a new series of index numbers for Bombay City with weights based on the results of that enquiry as from July 1934. A full note on the method used for the compilation of the new index has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been given at pages 370-2 of the issue of the *Labour Gazette* for January 1940. Whereas the old index covers 24 items divided into four main groups I. Food (17 items); II. Fuel and Lighting (3 items); III. Clothing (3 items); and IV. House Rent, the new index has been made as comprehensive as possible by expanding the list of commodities covered and adding a new group for "Miscellaneous expenditure" which did not find a place in the old index. The new index covers 46 items divided into five groups: I. Food (28 items); II. Fuel and Lighting (4 items); III. Clothing (6 items); IV. Miscellaneous (7 items); and V. House Rent. The following two tables give the cost of living index numbers for working classes in Bombay City for the months of January, April, July and October in each year firstly with July 1914 as the base from January 1918 to April 1937 and secondly with July 1933 to June 1934 as the base from July 1934 to April 1941 :—

Bombay Working Class Cost of Living Index Numbers.

TABLE No. I.

(*July* 1914=100.)

Year.	January.	April.	July.	October.	Annual average.
1918 ..	134	144	149	175	154
1919 ..	182	167	186	174	175
1920 ..	183	172	190	193	183
1921 ..	169	160	177	183	173
1922 ..	173	162	165	162	164
1923 ..	156	156	153	152	154
1924 ..	159	150	157	161	157
1925 ..	157	158	157	153	155
1926 ..	155	153	157	155	155
1927 ..	156	153	156	151	154
1928 ..	154	144	147	146	147
1929 ..	149	148	148	149	149
1930 ..	147	140	139	131	137
1931 ..	117	111	108	108	110
1932 ..	110	108	109	109	109
1933 ..	109	101	103	100	103
1934 ..	96	93	97	100	97
1935 ..	98	98	101	103	101
1936 ..	103	100	101	103	102
1937 ..	104	104	..	..	..

TABLE No. II.

Average Prices from July 1933 *to June* 1934=100.

Year.	January.	April.	July.	October.	Annual average.
1934 ..	..	..	97	100	99
1935 ..	99	98	101	101	100
1936 ..	103	100	101	102	101
1937 ..	104	105	107	108	106
1938 ..	107	105	106	105	106
1939 ..	105	103	105	108	106
1940 ..	114	110	113	113	112
1941 ..	117	121	..	..	..

It will be noticed that although the base periods and the methods used in the compilation of the two different sets of index numbers given above are totally different, the actual index numbers for the same dates in the two series are strikingly similar.

Working class cost of living indexes for Ahmedabad and Sholapur compiled on a post-war basis have been published in the *Labour Gazette* month by month since the beginning of the year 1928. The bases of these indexes are the results of the family budget enquiries conducted at these two centres in the years 1926 and 1925 respectively. Details regarding the scope and method of compilation of the index for Ahmedabad have been given in the January 1930 issue of the *Labour Gazette* and for Sholapur in the February 1931 issue of the same publication. The following tables give for these two centres the working class cost of living index numbers—for certain selected months as well as annual averages—for the years 1928-1941.

Cost of living index figures are now being compiled and published by Burma and various other Provinces in India. The Government of Burma compiles index numbers, on base 1931=100, for four classes of industrial workers in Rangoon: Burmans; Tamils, Telugus and Oriyas; Hindustanis and Chittagonians. The Government of the Central Provinces and Berar compiles two separate sets of figures for Nagpur and Jubbulpore with January 1927 as base. The Government of Madras, which was hitherto compiling only one series for Madras City with the average prices from July 1935 to June 1936 equal to 100, is now compiling six additional series of cost of living index numbers for low paid employees at Bellary, Cuddalore, Trichinopoly, Madura, Coimbatore and Calicut. The Government of Bihar compiles cost of living figures with the average cost of living for the five years preceding 1914 as base for six centres in the Province: Patna, Muzaffarpur, Monghyr, Jamshedpur, Jharia and Ranchi. The Government of Orissa compiles similar index numbers on the same basis as Bihar for its headquarters town of Cuttack. The Government of Punjab also has a series for Lahore with 1931-35 as the base. In the United Provinces, fortnightly cost of living index figures with the prices on 6th August 1939 =100 have been compiled since January 1940 for the City of Cawnpore. The figures for the fortnight ending with a date near the 15th of every month are as follows: 1940—January, 112; February, 112; March, 110; April, 110; May, 108; June, 109; July, 106; August, 111. In the following table we set out the cost of living index numbers for each month in 1940 and for as many months in 1941 for which figures are available for Madras, Lahore, Nagpur, Patna, Cuttack and for Burmans in Rangoon.

STANDARD OF LIFE.

The results of family budget enquiries conducted by what is known as the 'extensive method' form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, etc., is therefore a sure indication of an improved standard of living. The Bombay Labour Office has carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries have also been conducted in Ahmedabad and Sholapur cities and the results of both these enquiries were published in the year 1928. In Burma, the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. In Madras, the Director of Industries published in 1938 the results of an inquiry into the family budgets of industrial workers in organized and unorganized industries in Madras City conducted under the direction of the Commissioner of Labour. A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and Jubbulpore in the Central Provinces with the object of compiling cost of living indexes. The results of the inquiry at Cawnpore are not yet ready.

The following comparative data regarding the distribution of expenditure will serve to indicate the standards of life of working classes at different centres in India :—

Percentage Distribution of Expenditure.

Groups.	Bombay (1932-33).	Ahmedabad (1933-35).	Sholapur (1925).	Nagpur (1927).	Jubbulpore (1927).	Rangoon (1928).	Madras (1938).
Food	46.60	49.31	49.25	64.10	66.00	52.7	52.63
Fuel and light ..	7.11	6.65	9.60	9.62	7.95	5.2	6.67
Clothing	7.75	9.12	11.86	10.70	10.86	10.6	4.50
House rent ..	12.81	10.97	6.27	1.92	1.44	13.9	11.14
Miscellaneous ..	25.73	23.95	23.02	13.66	13.75	17.6	25.06
Total ..	100.00	100.00	100.00	100.00	100.00	100.0	100.00

NOTE.—The figures are not *strictly comparable* due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection :—

—	Bombay.	Ahmedabad.	Sholapur.	Nagpur.	Jubbulpore.	Rangoon (Burmese).	Madras.
Average size of the family (in persons) ..	3.70	4.05	4.57	4.33	3.76	3.01	6.03
Average monthly income ..	Rs. a. p. 50 1 7	Rs. a. p. 46 5 0	Rs. a. p. 39 14 10	Rs. a. p. ..	Rs. a. p. ..	Rs. a. p. 58 8 3	Rs. a. p. 37 5 11

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour have made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act, 1936 to which reference has been made in an earlier section, is a measure intended to secure to the workmen prompter payments of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have had under consideration certain other pieces of legislation which were also designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission, the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission was that at least so far as industrial workers in receipt of wages or salary amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various local Governments on this question, the Government of India came to the conclusion that central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Act in 1934 which makes besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But, unfortunately, the motion for the reference of the Bill to a Select Committee was lost.

The Labour Office of the Government of Bombay is at the moment engaged in conducting a big family budget inquiry in Bombay City with a view to ascertain the effects of the introduction of Prohibition in the City with effect from 1st August, 1939. The number of budgets proposed to be collected for this inquiry is 2000 and it is estimated that the inquiry will take about a year to complete.

WAGE RATES AND EARNINGS.

The only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay for the Province of Bombay. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to-day little or no definite information regarding rates of wages is available for any province outside the Province of Bombay. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages and in the reports of Courts of Inquiry appointed under the Indian Trade Disputes Act or in the reports of Provincial Committees appointed by certain Local Governments to enquire into wages and conditions of employment of workers in the cotton textile industry. Some of the annual factory administration reports published by the Provincial Governments in India contain remarks about prevalent wage rates but these relate only to certain units and they can by no means be considered as being the dominant rates at any one time for any particular industry or area. The annual Mines' administration reports also contain figures for daily earnings for certain main occupations in representative mines in the provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every commission and committee appointed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more particularly so in India where conditions vary so markedly and widely not only between industry and industry and centre and centre but also between unit and unit in the same industry in the same centre. In the section on hours of work and conditions of employment, some indications have been given of the wide variations in the periods and methods of wage payment. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nicknames. Even in concerns which use standard English occupational terms, the position is rendered more difficult owing to the existence of arbitrary gradings of different occupations into several sub-grades and classes. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India, therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms, and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. The existence of wide variations in rates and conditions, moreover, makes it advisable to cover as many as possible if not all the units in the industry under survey in order that results which are not blassed one way or the other may be secured. In view of what has been stated it is obvious that no Government in India can undertake a comprehensive enquiry into industrial wages unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose. The only Provincial Government in India which has such a staff is the Government of Bombay.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923, 1926, 1933 and 1937 into the wages of cotton textile mill workers in the Province of Bombay: an enquiry into agricultural wages covering a period of twenty-three years from 1900 to 1922; an enquiry into the wages of peons in Government and commercial offices in 1922; enquiries into the wages of all municipal employees in the Province in 1924, of clerical employees in Railway and Commercial offices in Bombay City in 1925, of printing press workers in Bombay City in 1929, of workers employed in the building trade in Bombay City in 1935, and of all employees in the retail trade in various important towns in the Province in the same year. In 1934 the Labour Office conducted a general wage census covering all workers in all working perennial factories in the Province including cotton mill operatives. The second part of this census covering seasonal factories was conducted in the winter of 1935-36. Except for the results of the enquiry into wages in cotton textile Mills conducted in 1937 expressly for the Bombay Textile Labour Inquiry Committee, the results of all the other enquiries have been published either in special reports or in articles in the *Labour Gazette*.

WAGE RATES.

Certain important facts govern all discussions on wage rates in India. Firstly, there is as yet no Government machinery for the fixation of minimum wages; and, in the absence of strong trade unions covering entire or sections of whole industries, there are no trade agreements or union rates except in the cotton textile industry in Ahmedabad which have been accepted both by employers and employees. There are also few awards by conciliation boards. The bargaining power of the workers is moreover weak; and the cumulative result of all these various factors is that employers are almost entirely at liberty to fix any rates they like. Secondly, except for a limited measure of standardisation of time rates of wages for unrationalised occupations in the cotton textile industry in Bombay City and for weavers, siders and doffers in cotton mills in Ahmedabad, there is little or no standardisation of rates in any industry in the country; and, consequently, wage rates not only vary widely between centre and centre and unit and unit in the same centre but also between different individuals in the same occupation in one unit. This variation in rates is further complicated by the fact that the rates are often subject to various additions in the form of dearness allowances and/or good attendance and efficiency bonuses and to deductions for percentage cuts. Thirdly, frequent changes are made in the basic units of time for which rates are fixed; *e.g.*, rates which are monthly or daily may be changed into daily or hourly rates. Fourthly, almost all the principal occupations in Government and railway concerns and in the industrial establishments of public and local bodies are divided into several grades and sub-grades. The basis of the grading in all cases is arbitrary and varies widely between the different administrations. Fifthly, vacancies are seldom if ever filled on the same rates as those paid to the workers who have left. In such cases advantage is usually taken to lower rates, and the wages offered to new entrants depend more on their personal ability and degree of competence and also on the rates prevalent in other similar concerns and the supply of the type of labour required. The factors of personal competence and the capacity of bargaining power are the most important considerations in wage fixation. The first varies widely between individual and individual among Indian workers and whereas a minority in all occupations may be thoroughly efficient, the same cannot be said of the majority. The second depends upon densities of industrial populations in particular locations. Lastly, rates vary widely between town and mofussil in the case of the semi-skilled and unskilled operations. But, this variation operates within narrower limits for the more skilled occupations in which the really competent men are able to command their due anywhere. In view of these several diversely varying factors it is impossible to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre. The compiler of this note, however, has had a wide experience of wages in India and the following figures quoted by him give an approximate idea of the predominant rates for fairly efficient workers in certain of the more important occupations in all sections of Indian industry at the beginning of June 1941 :—

Occupations.	Most usual period of payment.	Rates in		
		Cities.	Towns.	Mofussil.
		Rs.	Rs.	Rs.
Foremen (European)	Monthly	500 to 700	400 to 600	350 to 550
„ (Indian)	„	250 to 400	150 to 300	150 to 250

EARNINGS.

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well-being of the masses, provided however that the term "earnings" has one uniform meaning in its computation and application. In practice, the connotation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings; (2) net earnings; or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. Let us explain. "Gross earnings" for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances, bonuses and perquisites—or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or grain allowances or allowances for overtime work. Bonuses may be for good attendance and/or for efficiency. Perquisites may be in the form of free housing, travelling allowances, free medical attendance, free railway passes, the right to purchase from cheap grain and cloth shops, etc. "Net earnings" are gross earnings less deductions for fines. "The amount in the pay envelope" is net earnings less any further deductions which may be made by an employer for house rent, medical attendance, subscriptions to provident funds, income-tax, refunds of advances, payments for purchases from co-operative stores or cheap grain or cloth shops, repayments of loans from provident fund accounts or from co-operative credit societies, subscriptions to sports clubs or institutes, etc. The amount in the pay envelope can never be reckoned as earnings because every worker is expected to pay for his income-tax, house rent and purchases and to liquidate his other liabilities and debts from his income. In all cases where fining is widely prevalent gross earnings can also not be reckoned as income because these may be habitually liable to deductions for fines. 'Net earnings' would most correctly approximate to earnings for statistical purposes. Sufficient has been stated to show how difficult the computation of "earnings" can be. Different statisticians and different bodies hold different views as to its correct computation and that is the reason why the term 'earnings' is so widely interpreted. The most frequent and general usage of the term for statistical purposes is to take gross earnings in cash less fines and without evaluating such perquisites as free housing, free medical attendance and free railway passes in the case of railway workers, and to include travelling allowances where these are paid for conveyance between place of work and home but not when they are paid for transport to some other temporary sphere of work. This is the basis on which figures for "earnings" were collected by the Bombay Labour Office for the purposes of the General Wage Census; and, subject to minor modifications, for its other enquiries into wages. It is of the utmost importance that in the conduct of every enquiry into wages, all the persons who are entrusted with the work of filling up the required returns should have a clear and thorough conception as to what should or should not be included in "earnings."

Two sets of figures may be compiled for "earnings": (1) *average daily earnings* ascertained by dividing the total earnings for a group of workers in any occupation by the total of the number of days actually worked by all the individuals in the group; and (2) *average monthly earnings* ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average daily earnings by the weighted average less the figure for average absence as shown by the figures for average percentage attendance for the group. *Average percentage attendance* is the percentage ratio of the total number of days actually worked by all the individuals in a group to the possible working days in the pay period for the group.

Part I of the General Wage Census covering all perennial factories in the Province of Bombay covered nearly a thousand occupations in nearly twenty industries. For the purposes of the census the Province of Bombay was divided into ten territorial areas and the reports contain the averages of daily and monthly earnings for all monthly paid workers in all the occupations concerned in each of these ten areas. It is obviously not possible for us to reproduce the figures here but for purposes of general interest we give below (1) the averages of monthly earnings for six of the most important occupations which are to be found in all factories, but particularly in engineering workshops; (2) the general averages for men in all engineering and "common" occupations in all factories; (3) the average monthly earnings in six of the most important printing occupations; (4) the general averages for "process" operatives in all printing presses which are factories for the purposes of the Indian Factories Act in the Bombay Presidency; (5) the average daily earnings in the more numerically important occupations in the cotton textile industry for 1934 with the increases recommended by the Bombay Textile Labour Inquiry Committee in their Interim Report which was published in February 1938 and which were accepted by all Cotton Textile Mills in the Province and also the amounts granted as dearness allowances in centres where such increases were granted; (6) the average daily earnings in the same occupations in July 1937 in cotton textile mills as published in the Committee's final Report with the recommended increases and the dearness allowances again added to the published figures; and (7) the general averages of daily earnings for all male and women operatives for the whole of the Province of Bombay for all factory industries in Bombay excluding the Textile, the Engineering and the Printing Industries. The figures in brackets in the first, the third, the fifth, the sixth and the seventh tables show the numbers of workers covered by the averages to which they relate.

N.B.—These figures are for the year 1934. No changes have been made in the figures to provide for any cuts or increases in wages that may have taken place since that year. If these figures are increased by 12½ per cent. or two annas in the rupee to provide for the dearness allowances granted during the years 1940 and 1941 they will be a fair representations of average earnings in June 1941.

WORKMEN'S COMPENSATION.

Under the ordinary common law an injured workman is entitled to recover damages or compensation for an injury sustained by him in the course of his employment if the injury is proved to have been caused by the personal negligence of his employer. In addition, the Indian Fatal Accidents Act of 1855 permitted the award of damages to the dependants of a deceased workman if the accident resulting in his death was due to the wrongful act, neglect or fault of the person responsible for the accident. The procedure in connection with the recovery of damages under both the common law and the Fatal Accidents Act was, however, extremely cumbersome. This together with the ignorance and the illiteracy of Indian workers and their financial disability in undertaking extensive litigation had placed them in a very disadvantageous position in suits for compensation. Moreover, with the growing industrialisation of the country, accidents were annually becoming more numerous than before and, in their results, were responsible for considerable hardship on the workers and their families. Disabilities similar to these had been removed in most of the industrialised countries of the world by the passing of workmen's compensation laws providing for easy and speedy relief to workmen injured as a result of industrial accidents and to their dependents in cases where the accidents resulted in death. The necessity for such legislation in India was obvious and the Government of India after circulating the proposals on the subject passed the Workmen's Compensation Act, 1923, which was brought into operation with effect from the 1st July 1924. This was the first piece of legislation in the field of social insurance in India.

In its main principles, the Indian Act follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands to-day covers nearly eight million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negligence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident *arising out of and in the course of employment* and where the accident is not directly attributable to misconduct, breaches of rules or orders or disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident; provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning, (2) chrome ulceration or its sequelae, and (3) compressed air illness (Caisson Disease) or its sequelae.

The Royal Commission on Indian Labour made a long series of recommendations for the improvement of the Act; firstly, to extend its scope so as to cover all types and classes of workers who were likely to be most affected by the increased risks of modern industry; secondly, to enhance the scales of compensation payable and to facilitate the methods for their payment; and, thirdly, to effect various changes designed to improve the administration of the measure. It is not necessary for the purposes of this note to trace the evolution of the legislation in connection with workmen's compensation in India since the passing of the first Act in 1923 and it will be more useful if we gave the main provisions of the Act as it stands to-day.

MAIN PROVISIONS OF WORKMEN'S COMPENSATION ACT.

Classes of Workmen Covered by the Act.— These have been specified in the definition of the term "workman" contained in section 2(1) (*n*) and in Schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 are excluded. Speaking broadly the Act covers railways; factories; mines; seamen; docks; persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height or of dams and embankments, roads, bridges or tunnels; or wharves, quays, sea walls or other marine work; the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables; aerial ropeways, canal pipe lines or sewers; the fire brigade; railway mail service; operations for winning natural petroleum or natural gas; blasting operations and excavations · ferry boat services; cinchona, coffee, rubber or tea plantations; electricity or gas generating stations; lighthouses; cinematograph picture producing and exhibiting; divers: elephant and wild animal trainers and keepers and salaried motor drivers and chauffeurs. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. As far as seamen are concerned, both seamen on ships registered in India and those on ships registered in foreign countries are included. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Governor-General in Council is empowered to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature.

Amounts of Compensation Payable.—The amount of compensation payable depends on the average monthly wages of an injured or deceased workman. The term 'wages' includes overtime pay and the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 50 and Rs. 60, the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused.

(NOTE: *Permanent total disablement* means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent. loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependants.—These are defined in two categories: firstly, those who are in practically all cases actually dependants; and secondly, those who may or may not be in that position. The first includes a wife, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a husband, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General.—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner; (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner; and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration.—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Local Governments. The Provinces of Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead: (1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman; (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in British India while generally agreeing as to the inequitability of the doctrines have been such as to leave it open to employers in most Provinces to have recourse to them. The Government of India introduced a Bill in the Central Legislative Assembly on the 15th August 1938 to declare that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression "monthly wages" which has now been defined to mean the amount of wages deemed to be payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves any doubt as to whether a workman employed on wages payable otherwise than by the month or on a monthly basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions 2 and 3 Geo. 6, C. 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act. The second amendment referred

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could be made under the said Act and that the Provincial Government certifies that the application was rejected.

The Government of India in the Department of Commerce, in concurrence with His Majesty's Government, formulated a Lascars War Risk Compensation Scheme in August 1940 in respect of death or disablement directly attributable to war injuries sustained by lascars employed on ships registered in the United Kingdom. The scheme provides for widow's pensions, children's allowances and generous disablement allowances. For example, for total disablement due to War injuries a lascar earning Rs. 40 per month will be paid an allowance of Rs. 5,000 in full settlement of all claims. The widow of a lascar earning from Rs. 30 to Rs. 39 per month will receive a life pension at the rate of Rs. 10 per month.

STATISTICS OF WORKMEN'S COMPENSATION.

The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the original Act came into force. These statistics show that in the period of fourteen and a half years from July 1924 to December 1937 (the Statistics for the year 1939 had not been published when we went to press in June 1940 for this edition of the Year Book) the total amount of compensation paid amounted to over 152 lakhs of rupees in over 283,000 cases. The following table shows the number of cases, classified by nature of injuries and the amounts of compensation paid in each year since 1924:—

Workmen's Compensation Statistics—All-India, 1924-38.

EFFECT ON INDUSTRY.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*Vide* para. 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance but there can be no denying the fact that the introduction of workmen's compensation has helped considerably to improve the standard of safety in the country. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. This Bureau continued to render its valuable co-operation in the prompt settlement of claims. In Bombay, insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

The report for the year 1938 states that, as in the previous years, a few trade unions were reported to have assisted their members to obtain compensation. In the Province of Bombay, the Textile Labour Association, Ahmedabad, was the only trade union to take any effective share in the settlement of claims for compensation on behalf of the workers. This Union handled 188 cases during 1938 and compensation amounting to Rs. 19,776 was secured. In Bengal the activity of individual trade unions was more marked in 1938 as compared with 1937.

TRADE UNIONISM AND TRADE UNION LAW.

The earliest known trade unions in India were (1) The Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act; (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions; (3) a Printers' Union started in Calcutta in 1905; and (4) The Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the first World War. Trade organisations were, however, not unknown and trade or craft guilds had a definite place in the social economy of the village communities. Each trade or craft was the monopoly of a particular caste, and the organisation that existed for each occupational caste was known as a 'guild'. The two main functions of these guilds were (1) to regulate the relations between the members *inter se*; and (2) to deal with questions affecting the relations of the caste as a whole *vis-a-vis* the community. The *panchayats*, as the executives of these guilds were called, enforced their decisions on their members by means of social sanctions, and their demands on the community by means of *hartals*, *i.e.*, withholding of service. These guilds differed from modern trade unions in that they did not consist of wage earners, were not open to members outside the particular castes concerned, and that they had no written rules or regulations. Their background was more social than industrial and they were a type of 'close trade unions.' Contact with the West and the gradual industrialisation of the country, however, introduced cleavages in the solidarity of the village communities and consequently into the homogeneity of the old craft guilds which began to disintegrate and disappear only to emerge later in a form more suited to modern industrialism.

The decade following the end of the first World War witnessed rapid developments in the field of trade unionism in India, but it must be regretfully admitted that even today organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many other countries of the world. The reason for this can be put in a nutshell: lack of a will to organize as far as the workers are concerned and the absence of efficient leadership. Some labour leaders were men who had the good and welfare of labour genuinely at heart. But many went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere propagandists and mischief-makers who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers constituted themselves into strike committees. These committees when they were first formed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

secured a considerable measure of success in so far as concessions in wage rates were concerned; but, whereas many of these self-appointed committees fell into a state of inanition on the conclusion of a dispute, a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginnings of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership; but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and in the textile industry in Ahmedabad City, and in some other centres.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the annual sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. The latter bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mills workers in Bengal and four or five unions of textile workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform. It is true that the Bombay Girni Kamgar Union—a communist organisation formed at the commencement of the general strike of six months in the cotton mill industry in Bombay City in 1928—claimed a membership of over 50,000 at the end of that year, but this union lost its membership almost entirely after the disastrous general strike which it conducted in 1929. The latter strike almost killed the trade union movement in the cotton textile industry in Bombay and although the Red Flag Girni Kamgar Union has succeeded from time to time in increasing its membership, it has equally rapidly lost the greater part of it owing to the uncalled for and disastrous strikes which it has conducted in the industry. The latest example of such strikes was the General Strike which lasted from 3rd March to 13th April 1940 in connection with the refusal of the Union to accept the Dearness Allowances offered by the Millowners' Association, Bombay, which had accepted the findings of the Board of Conciliation appointed by the Government of Bombay in the matter.

In an earlier section it was stated that if employers in Indian industry had had the sagacity and the foresight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical international conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to be to combat trade unionism. It is unfortunately too true that many employers in India have looked and even today look askance at the growth of organisation among their workers and that employees who take part in trade union activities are victimised. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator; and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was or is available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries; but with the exception of Ahmedabad where a strong trade union had been formed of the workers in cotton textile mills under the leadership of Mahatma Gandhi whom the Ahmedabad Millowners would not possibly displease on political grounds and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned, trade unions were faced with a three-edged weapon. On one side workmen taking interest in trade union activities were victimised; on another, the majority of the employers refused to recognise unions whose executives were com-

posed of outsiders and on the third, an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book. The Indian Trade Unions Act was passed in March 1926 and was brought into operation with effect from 1st June 1927.

THE INDIAN TRADE UNIONS ACT, 1926.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers; and persons under the age of 15 are debarred from membership of any registered union.

Registration.—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6; and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent. of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the local Government for the purpose; and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions.—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects; but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions.—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases.

The Government of India issued a notification under the adaptation of India Laws Orders in Council in 1938 directing that unions whose objects are not confined to one Province and whose membership covers persons in two or more Provinces, as in the case of Railway Unions, should register with the Registrar appointed for such Trade Unions, under adapted Section 3. The additional District Magistrate of Delhi was appointed Registrar of Trade Unions for such unions. But, by a notification dated 16th January 1941, the powers of the Central Government under the Indian Trade Unions Act in relation to a trade union whose Head Office is situated in any particular Province but whose objects are not confined to that Province have been again transferred to Provincial Governments.

Registered unions are empowered under the Indian Trade Unions Act to carry on any form of insurance activity without being under any obligation to secure professional advice as to the actuarial soundness of such business. By virtue of Section 118 of The Insurance Act, 1938, insurance business carried on by a trade union is not subject to the provisions of that Act. The result therefore has been that certain unions are undertaking unsound schemes of insurance now banned by the Act especially

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that forms of it which is carried on on the basis of the dividing principle. With a view to protect the interests of members of trade unions who are and might be the victims of impostures, the Government of India, in September 1940, issued a circular letter to all Provincial Governments inviting opinions as to the application of The Insurance Act, with such modifications as might be necessary, to insurance business carried on by Trade Unions.

The administration of the Indian Trade Unions Act is entirely on a provincial basis and each local Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province. All provincial Governments are empowered to make rules for the manner in which the annual audit of registered unions should be carried out, for prescribing the forms and the manner in which unions may apply for registration and in which registered unions should forward the required notices, etc., to the Registrar, and for the fees payable for registration and inspection of the register and other documents pertaining to any registered union. Unlike the various other pieces of labour legislation in India which have been subjected to frequent revision, there has been no amendment of the Indian Trade Unions Act, except for a slight modification which was made in 1928 in Section 11 regarding appeals in order to clarify the provisions of that section, and the present law on the subject continues to remain the same as it was when the Act was first passed in 1926.

EXTENT OF REGISTRATIONS UNDER THE ACT.

Trade unions were at first slow to seek registration under the Act. There had been no prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in the case of strikes conducted by unions since the Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice, most of the existing unions thought that registration involved obligations *re.* maintenance of proper books and accounts, audit and the submission of notices and statements of annual accounts and restrictions *re.* the framing of rules in accordance with the requirements of the Act and on expenditure which could be incurred which were too disproportionate in comparison with the rights and privileges which registration conferred. The impetus to registration however came from the employers who in many cases insisted on registration prior to recognition—in many cases even registration did not secure recognition but in many cases registrations were short-lived because they had to be cancelled owing to failure to submit annual returns or for non-compliance with the other requirements of the Act. It is of interest to observe that the Textile Labour Association, Ahmedabad, which is the biggest and best organised trade union in India refrained, on purely political grounds, from registering until the end of 1935 and it only did so then owing to the probable decision of the Delimitation Committee to make registered textile unions in Ahmedabad a basic constituency for the return from that centre of labour representatives to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The following table shows the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns. The figures exclude cancellations of registration.

Registered Trade Unions in British India.

Year.	Number of registered trade unions.	Unions furnishing returns.		
		Number.	Membership.	Income.
				Rs. (In lakhs).
1927-28	29	28	100,619	1.64
1928-29	75	65	181,077	3.17
1929-30	104	90	242,355	4.33
1930-31	119	106	219,115	4.07
1931-32	131	121	235,693	4.78
1932-33	170	147	237,369	5.57
1933-34	191	160	208,071	5.03
1934-35	213	183	284,918	5.29
1935-36	241	205	268,326	5.29
1936-37	296	228	261,074	4.88
1937-38	420	343	390,112	6.93
1938-39	555	394	399,159	8.90

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The percentage of female membership in the above figures is very small indeed. In 1927-28 it was 1,166, in 1932-33 it was 5,090 and in 1938-39 it was 10,945 or only 2.7 per cent. of the total membership in that year. Out of the 555 registered unions on the 31st March 1939, 191 unions were in Bengal, 52 in the Province of Bombay, 87 in the Province of Madras and 55 in the Punjab. The figures given in the above table for membership and income are theoretical because they include persons who have not paid their subscriptions and income which has not been recovered. If the membership of 399,159 in the 394 unions which furnished returns for the year ending 31st March 1939 is analysed it is found that 144,991 were employed on railways and that 45,121 were seamen. The membership in 75 registered unions of textile workers was 73,074. The All-India Annual Reports on the administration of the Indian Trade Unions Act which are compiled and published by the Government of India are considerably delayed owing to the difficulty which Provincial Governments experience in securing the annual returns from the registered unions concerned. The Report for the year 1939-40 was, therefore, not available when we went to press but from such information as is available we find that there were nearly 732 registered trade unions in India in September 1940. Of these, 215 were in Bengal, 126 in Madras, 96 in the Punjab, 71 in Bombay, 48 in the United Provinces and 66 in the Central Provinces and Berar. Figures showing the membership of these unions are not available but it is reckoned that the total membership of all the 732 odd unions in India in that month must have been about three-quarters of a million. The Province of Bombay is the only province in India which regularly collects information and statistics in connection with all trade unions whether registered or not. The following table shows the progress of the trade union movement in that province :—

Growth of Trade Unions in the Province of Bombay.

Year.	Number of unions.	Average membership during the year.
1923	17	41,030
1926	54	62,772
1929	92	191,937
1932	89	104,458
1935	108	103,429
1936	99	97,392
1937	114	93,453
1938	153	126,455
1939	176	159,026
1940	177	191,942
1941 (1st qtr.)	172	192,266*

*Actual figure.

If the figures contained in the above table for the year 1941 (1st March) are analysed by industries, the results are as set out below :—

Distribution of Membership of Bombay Unions.

Class of industry.	Number of unions.	Membership.	Percentage to total membership.
Textile	27	90,102	46.86
Seamen	2	23,722	12.34
Railways	8	29,419	15.30
Posts and Telegraphs	34	6,843	3.56
Municipal	10	9,871	5.13
Miscellaneous	91	32,309	16.81
Total ..	172	192,266	100.00

Out of the 27 unions of cotton textile workers in the Province of Bombay, eight with a total membership of 44,045 are in Bombay and ten with a total membership of 35,376 are in Ahmedabad.

THE PROGRESS OF THE TRADE UNION MOVEMENT IN INDIA.

We have so far dealt with the development of the trade union movement in India until the coming into operation of the Trade Unions Act. Up-to-date statistics based on such figures as are available have also been given. We shall now proceed to conclude this review with a rapid survey of the main events in the movement since 1927. The height of the movement was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Girni Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases. Their main object in getting into the trade union movement, however, was to use it as a tool for the furtherance of their revolutionary principles and doctrines for the overthrow of the existing Government and the uprooting of capitalism. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Girni Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it took ten years to recover.

The communists not content with the mischief they had wrought in the ranks of individual trade unions made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girni Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the tenth session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs. S. V. Deshpande and B. T. Randive broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour; but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group; (2) the liberal group; and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues. At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mr. Gandhi throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trade Union Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these bodies were that the basis of representation on the joint General Council of the new combined Trade Union Congress be fifty-fifty—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trade Union Federation *in toto*. The following were appointed office bearers of the Trade Union Congress: Dr. S.C. Banerji (Federation) President; Mr. Aftab Ali (Federation), Mr. Jamnadas Mehta (Federation) and Mr. Mukundlal Sircar (T.U.C.) Vice-Presidents; Mr. R. R. Bakhale (Federation) Secretary; Mr. R. S. Nimbkar (T.U.C.) Treasurer; Mr. B. K. Mukerji (T.U.C.) and Mr. S. V. Parulekar (Federation), Assistant Secretaries. The General Council was to act for the combined body with the one limitation that questions relating to general strikes and affiliation with international bodies should be decided by a three fourth's majority. If this scheme worked well, the task of unification should be pushed further and the two bodies merged into one. Mr. R. R. Bakhale resigned his appointment as General Secretary of the Congress on his appointment as Vice-Chairman of the Biha

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Labour Inquiry Committee. His place was taken by Mr. S. V. Parulekar, but on the latter's conviction to 18 months' imprisonment under Sections 124A and 153A of the Indian Penal Code in March 1940, Mr. N. M. Joshi, M.L.A., was appointed Acting General Secretary. The Provisional Affiliation entered into at Nagpur in April 1938 was formally ratified at the Eighteenth Session of The All-India Trade Union Congress held at Bombay on the 28th and 29th September, 1940. The following Office Bearers were elected: *President*—Mr. V. R. Kalappa, M.L.A.; *Vice-Presidents*—Messrs. Aftab Ali, M.L.A., Purshottamdas Trikamdas and Charu Banerjee; *Treasurer*—Mr. R. S. Nimbkar; *General Secretary*—Mr. N. M. Joshi, M.L.A.; and *Assistant Secretaries*—Miss Shanta Bhalerao and Mr. Phani Ghosh.

The merging of the National Trades Union Federation with the All-India Trade Union Congress must be considered a landmark in the history of the trade union movement in India. In a country like India politics pervades almost every department of human activity. It was natural that political forces should have tried to utilise the labour platform for their own ends. If experience, however, is the best school of life, Indian labour had had its best schooling; but, although it took Indian labour twelve years to consolidate its ranks again, to learn to sink political and other differences and to act in unison in the furtherance of legitimate trade union aims was no small gain. There are many unions—notably, the Ahmedabad Textile Labour Association—which are still outside the All-India body. Every possible effort should be made to bring in as many of them as possible in order to make the Trade Union Congress fully representative. Political differences still persist but it is clear that the Congress realises the importance of speaking with one voice on major issues.

ENFRANCHISEMENT OF LABOUR UNDER THE NEW CONSTITUTION.

The question of representation of labour in the central and provincial legislatures has in recent years assumed considerable importance owing to the growing interest taken by the general public in labour matters. Under the constitution established by the Government of India Act, 1919, both the Governor-General and the Provincial Governors had powers to make a certain number of nominations to the Central Legislative Assembly and to the Provincial Legislative Councils. The majority of such nominations were to be from the ranks of Government officials but both the Governor-General and the Provincial Governors were permitted to exercise their option in nominating persons from other outside interests in order to remedy inequalities of representation. In pursuance of this power one nominated seat in the Legislative Assembly and one nominated seat in the Legislative Councils of Bengal and Bombay were reserved for representatives of labour. The Governors of Punjab, the Central Provinces, Bihar and Orissa and Assam followed suit and nominated one member each for labour interests in their respective Councils. A little later, the labour representation in Bengal was increased to two and in Bombay to three seats.

The question of the enfranchisement of labour under the new constitution received considerable attention from every Commission and Committee appointed in connection with the reforms—(1) the Provincial Franchise Committees set up by the various Provincial Governments in India in 1931; (2) the Franchise Sub-Committee of the Indian Round Table Conference; (3) the Indian Franchise Committee; (4) the Provincial Delimitation Committees set up by local Governments in India; and (5) the Indian Delimitation Committee set up in 1935 under the chairmanship of Sir Lawrie Hammond. Several alternative schemes of representation were considered. The Royal Commission on Indian Labour were of opinion that the method which was likely to be most effective in securing the best representation of labour was that of election by registered trade unions. The Indian Franchise Committee were, however, unable to accept trade unions as the sole basis of representation and they recommended representation through constituencies composed of registered trade unions and also through special labour constituencies composed of workers in factories employing a minimum of ten persons in selected areas and centres. On the basis of a combination of these two methods, the Committee recommended 38 seats for labour in the Provincial Legislatures—eight each for Bombay and Bengal, six for Madras, four each for Bihar and Orissa and Assam, three each for the United Provinces and the Punjab and two for the Central Provinces. With regard to the representation of labour in the Federal Assembly, the Indian Franchise Committee recommended that labour should get the same extent of representation as commerce, *viz.*, eight seats. Election should as far as possible be through registered trade unions except in the case of provinces such as Bengal and Assam where trade unions in the two chief industries of jute and tea are either too weak or non-existent. In such cases the method of representation should be considered at the time of the delimitation of constituencies. These various proposals were accepted by the Third Round Table Conference and by the Joint Select Committee of Parliament on Indian Constitutional Reforms with the exception of a slight reshuffling of seats consequent on the decision for the separation of Sind and Orissa. These two new provinces were to get one seat each at the expense of Bombay and Bihar and Orissa and the number of seats in the Federal Assembly was increased from eight to ten of which one was to be a non-provincial seat and the remaining nine to be distributed among the provinces, Bombay and Bengal getting two each and one seat each going to Madras, Bihar, the United Provinces, the Central Provinces and Assam.

The Indian Delimitation Committee, whose report was published in February 1936, laid down the following requirements which a trade union should fulfil before it can be included in the electorate:—

(1) It should have been in existence for two years and have been registered for one year before the date fixed for the preparation of the electoral roll;

(2) Its membership should not have fallen below 250 during the year preceding the preparation of the electoral roll;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(3) It must have complied with any rules made under the Indian Trade Unions Act for the inspection of books by the Registrar and for professional audit; and

(4) Its fulfilment of the preceding conditions should have been attested by a tribunal to be appointed by the Governor.

The Committee further recommended that the Indian Trade Unions Act should be so amended as to invest local Governments with the power of inspecting the registers of registered trade unions and to make Government or professional audit of their accounts compulsory. As regards the qualifications of an elector in a labour constituency, the Committee recommended that (1) he must have attained the age of 21 years; (2) he should have had a place of residence in the province for six months immediately preceding a date to be fixed by the local Government; (3) in the case of a trade union constituency, he should belong to a registered trade union included in the constituency and paid up his subscription for the twelve months preceding the date of the preparation of the electoral roll; (4) in the case of a special labour constituency he should have been in continuous employment in a factory or a mine for a period of not less than 180 days in the year preceding the date of preparation of the electoral roll; and (5) he should not be employed in a clerical, supervisory, recruiting or administrative capacity. The qualifications laid down by the Committee for a candidate are that he should have attained the age of 25 years, satisfied the conditions laid down in the Fifth Schedule to the Government of India Act and that he should be an elector either in the constituency for which he stands or in any other labour constituency in the province concerned. As far as the method of election is concerned, the Indian Franchise Committee were of opinion that where a trade union constituency is confined to a single area voting might be direct but where it covers two or more different centres election should be through an electoral college composed of delegates elected in each union in the proportion of one for each group of 100 workers. The Indian Delimitation Committee were, however, strongly in favour of direct election, whether in trade union or in special labour constituencies, unless there were quite decisive practical difficulties in the way but they favoured the principle of electoral colleges in the case of certain unions of railway workers.

As far as the actual constituencies for the Provincial Legislative Assemblies are concerned the Indian Delimitation Committee recommended that out of the eight seats given to labour in Bengal, two seats should be with trade union constituencies for registered unions of railway and water transport workers and six for special labour constituencies as follows: Registered factories in Calcutta and suburbs, Howrah, Barrackpore and Hooghly (one seat each), one seat for coal mines in the Asansol sub-division of the Burdwan District and one seat for tea garden labour in the Jalpaiguri and the Darjeeling Districts. In the Bombay Presidency, Ahmedabad textile unions and railway unions in Bombay got two seats each, the Bombay textile unions and unions of seamen and dock workers got one seat each and textile labour in Sholapur City got one seat on the basis of a special labour constituency. Of the six seats in Madras, all railway unions in the presidency and unions of textile workers in the Madras District got one seat each and the four remaining seats were divided between special labour constituencies of (1) textile workers in Coimbatore and Malabar, (2) Madras City dock and factory labour (excluding railways and textiles), (3) Vizagapatam dock and factory labour, and (4) West Godavari, Kistna and Guntur factory labour. In the United Provinces all registered trade unions got one seat and the two remaining seats were allocated to industrial factory labour in Cawnpore and industrial labour in Lucknow, Agra, Aligarh and Allahabad. In the Punjab, the North Western Railway Union got one seat and the two remaining seats were allocated to industrial labour in special labour constituencies composed of certain districts of East and North Punjab. In Bihar, registered mining unions in Dhanbad were allotted one seat and three went to special labour constituencies for (1) Jamshedpur factory labour, (2) Monghyr and Jamalpur factory labour, and (3) Hazaribag mining labour. In the Central Provinces, trade unions in Nagpur City got one seat and the remaining seat was allotted to a special labour constituency of industrial labour employed in certain areas in the rest of the province. The one seat in Orissa is or a special constituency for the whole province and the allocation of the four seats in Assam are to vary at successive elections between tea gardens in different districts. As far as representation in the Federal Assembly is concerned, the proposals vary between the allocation of the two seats for the Bombay Presidency between all registered unions in Bombay and Ahmedabad, to the Governor of the Province acting at his own discretion at each successive election in Assam.

In the following table we reproduce the names of the various persons elected to the different Provincial Legislative Assemblies in India from different Labour Constituencies:—

MADRAS LEGISLATIVE ASSEMBLY.

Mr. G. Krishnamurthi Avl.	Railway Trade Unions.
Mr. Genta Chelvapathi Chetti Garu	Textile Trade Unions.
Mr. N. G. Ramaswami Nayadu Avl.	Textile Workers.
Mr. P. R. K. Sarma Avl.	Madras City Dock and Factory Labour (excluding Textile and Railway Labour).
Mr. Subbarao Karunakaram Garu	Vizagapatam *cum* East Godavari Dock and Factory Labour.
Mr. V. V. Narasimham Garu	West Godavari *cum* Kistna *cum* Guntur Factory Labour.

BOMBAY LEGISLATIVE ASSEMBLY.

Mr. D. K. Jagtap	Bombay City and Suburban Textile Unions.
Mr. Gulzarilal Nanda	Ahmedabad Textile Unions (Two seats).
Mr. K. K. Desai	Ditto.
Mr. S. H. Jhabvala	Railway Unions (Two seats).
Vacant.	Ditto.
Mr. A. H. Mirza	Trade Unions of Seamen and Dock Workers.

BENGAL LEGISLATIVE ASSEMBLY.

Mr. J. N. Gupta	Railway Trade Unions.
Mr. Aftab Ali	Water Transport Trade Unions.
Mr. Suresh Chandra Banerjee	Calcutta and Suburbs (Registered-Factories).
Mr. Niharendra Dutt Mazumdar	Barrackpore (Registered Factories).
Mr. Sibnath Banerjee	Howrah (Registered Factories).
Mr. M. A. Zaman	Hooghly *cum* Serampore (Registered Factories).
Mr. B. Mukerjee	Collieries (Coal Mines).
Mr. Litta Sirdar	Bengal Dooars (Western), Darjeeling Sadar, Bengal Dooars (Eastern) and Kurseong.

UNITED PROVINCES LEGISLATIVE ASSEMBLY.

Mr. Raja Ram Shastri	Trade Union Constituency.
Mr. Suraj Prasad Awasthi	Cawnpore Industrial Factory Labour.
Mr. B. K. Mukerjee	Industrial Factory Labour in Lucknow, Agra, Allahabad and Aligarh.

PUNJAB LEGISLATIVE ASSEMBLY.

Mr. Lala Sita Ram Mehra	Trade Unions.
Mr. Dewan Chaman Lal	East Punjab.
Rai Saheb Sohan Lal	North Punjab Labour Constituency.

BIHAR LEGISLATIVE ASSEMBLY.

Nil	Mining Trade Unions.
Mr. Babu Natha Ram	Jamshedpur Factory Labour.
Nil	Monghyr *cum* Jamalpur Factory Labour.
Mr. Babu Khetra Nath Sen Gupta	Hazaribag Mining Labour.

C. P. AND BERAR LEGISLATIVE ASSEMBLY.

Mr. G. S. Page	Trade Union Labour.
Mr. V. R. Kalappa	Factory Labour.

ASSAM LEGISLATIVE ASSEMBLY.

Mr. Bideshy Pan Tanty	Doom Dooma, Tinsukia and Dibrugarh.
Mr. Bhairab Chandra Das	Jorhat, Nazjira and East Golaghat.
Mr. Babu Binode Kumar J. Sarwan	Thakurbari, Biswanath and Paneri.
Mr. Sanat Kumar Ahir	Silchar Srimangal and Longal Valley.

ORISSA LEGISLATIVE ASSEMBLY.

Mr. Babu Pyari Sankara Roy	Orissa Labour Constituency.

SIND LEGISLATIVE ASSEMBLY.

Mr. N. A. Bechar	Sind Labour Constituency.

THE FUTURE OF TRADE UNIONISM IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Federal Assembly and to the Provincial Legislative Assemblies on the basis of registered trade unions are bound to have some effect both on the formation of new unions and on the registration of such of those as have not yet registered under the Indian Trade Unions Act. It is also probable that registered unions will make better endeavours than they have hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. At the same time, however, the imposition of these further restrictions on the conduct of the affairs of registered trade unions might very well tend to dissuade several interested outsiders from continuing at the helm of affairs of their respective unions ; and it is quite possible that in the absence of such leadership many unions will tend to disintegrate and disappear. As far as the workmen in Indian industries are concerned, trade unionism has not taken on anywhere near to the extent which it has with workmen in the West; and, as has already been stated above, the fear of victimisation is too strongly entrenched in the minds of the workers to enable them to enter into combinations promoted to safeguard their interests. Things might have been different had the labour franchise been limited entirely to registered trade unions but in most provinces outside the Province of Bombay the majority of the constituencies are special labour constituencies with which trade unions are in no way concerned. It is also very doubtful whether an Indian industrial worker will part with a monthly quota of his already meagre income for union subscriptions merely for the right of a vote. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly to the fact that their officials were not able to collect the necessary subscriptions from the members for the reason that the Indian workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because it provides a host of welfare schemes in the form of hospitals and dispensaries, education and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials like Mr. Gulzarilal Nanda, Mr. Khaudubhai K. Desai and Mr. S. P. Dave, who have made the union their life-work. The office of the union with its hundred or more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few, if any, unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membership—bolstered in order to convince the employers concerned *re.* their *bona fides* for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the hollow structure which exists to-day. Whilst there are no indications for optimism there is, at the same time, no cause for pessimism in the matter but the hopes of all persons interested in the welfare of the labour movement in India are, as far as trade unionism is concerned, in the laps of the gods.

INDUSTRIAL DISPUTES AND TRADE DISPUTES LEGISLATION.

In the first part of this note on " Labour in India " in which we have given a complete survey of the growth of the labour problem in this country from its first beginnings in the seventies of the last century up to the present day we have dealt at some length with all the more important industrial disputes, and we have also given the findings and the recommendations of the various committees and departmental enquiries instituted in connection with them. We have also given statistics of industrial disputes in India during certain periods of intense industrial strife and we have traced the growth of conciliation and arbitration machinery culminating in the passing, by the Government of Bombay, of the Bombay Trade Disputes Conciliation Act of 1934 and the Bombay Industrial Disputes Act of 1938 which replaced the 1934 Act from 1st August 1939. In view of this, there is very little left to be said in this particular section and our remarks will therefore be confined to a brief description of the Indian Trade Disputes Act, 1929 and to the all-India statistics of industrial disputes during the last seventeen years. We introduced a new feature in this section from last year of giving at the end of this section brief reviews of all industrial disputes affecting 5,000 workers or more which occurred in India during the last one year. A similar review has been given at the end of this section for the twelve months ending March 1941.

THE TRADE DISPUTES ACT, 1929.

The Trade Disputes Act was first passed in 1929. Its life was limited to five years but as a result of the recommendation made by the Royal Commission on Indian Labour in the matter an amending Act was passed in 1934 by virtue of which it was placed permanently on the Statute Book. The Government of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bombay under Sections 16 and 17 of the Trade Disputes Act launched a prosecution against eight leaders of the Textile Strike of 1934 on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance of a trade dispute; and (2) that the strike was designed to inflict severe, general and prolonged hardship on the community and thereby to compel the Government to take or abstain from taking some particular course of action. The accused were charged with the offence of inciting others to take part in an illegal strike. The Chief Presidency Magistrate held that the strike was not illegal and acquitted the accused. The Government of Bombay preferred an appeal in the High Court but lost the appeal too. The Government of India therefore passed a further Amending Act in March 1938 by virtue of which the words "general and prolonged" were omitted from clause (*b*) of sub-section (1) of section 16 of the Act. Advantage was taken at the same time to provide for the appointment of Conciliation Officers and to amend the Act in a few other minor particulars. The main provisions of the Act as it now stands are as follows:—

With the exception of sections 1 and 2 which deal with short title, extent, duration, etc., and interpretation, and section 19 which deals with rule-making powers, the main body of the Trade Disputes Act, 1929, falls into three parts. The first provides for the appointment of Courts of Enquiry and Boards of Conciliation (sections 3 to 14); the second contains special provisions with regard to strikes in public utility services (section 15); and the third deals with illegal strikes and lockouts (sections 16 to 18). The first part of the Act relating to the establishment of tribunals for the investigation and settlement of trade disputes was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference is that whereas the British Act sets up a standing and permanent Industrial Court, the Conciliation Boards which the Indian Act makes provision for are intended to be appointed *ad hoc* like the Courts of Enquiry, in order to deal with particular disputes.

The Governor-General in Council, in the case of railways or concerns under the control of the Government of India; and the local Government, in the case of all other concerns or groups of concerns, have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Inquiry for report; or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government; but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be, provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Inquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board; but in practice both parties would be expected to do so.

The second part of the Act which covers public utility services makes it a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in writing to the employer of their intention to do so. Penalties are also provided for persons abetting such an offence. This provision is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a settlement. Provisions of a somewhat similar type are also to be found in the Indian Post Offices Act and in a number of Municipal Acts in India; and the principle is one which has been widely accepted in other countries. Among "public utility services" have been included railways, postal, telegraph or telephone services; undertakings supplying light or water to the public; and any system of public conservancy or sanitation.

Clauses 16 to 18 of the Act relating to illegal strikes and lockouts closely follow the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927, but these provisions are only applicable in the case of those strikes and lockouts which satisfy both of two conditions: in the first place, the strike or lockout must have objects other than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong; and, in the second place, the strike or lockout must be designed or calculated to inflict severe hardship upon the community and thereby to compel Government to take or abstain from taking any particular line of action. Persons furthering illegal strikes or lockouts are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

Both the First and the Second Labour Ministers Conferences held in January 1940 and January 1941 gave considerable attention to the amendment of the existing law relating to Industrial Disputes. The conclusions reached have been described in the sections dealing with these Conferences above.

During the period of nearly ten years between the passing of the Act in 1929 and the coming into effect of Provincial Autonomy in April

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1937, the Industrial Disputes Act was made use of only on five occasions. After August 1937, however, Congress ministries, particularly in Madras, made an extensive use of the Act. In that Province five Courts of Inquiry and one Board of Conciliation were appointed in the year ending September 1938. Similar action has been taken in Bengal, Bihar, the United Provinces and Assam in the last of which a Court of Inquiry was appointed in August 1938 in connection with an industrial dispute in the Assam Oil Company, Ltd., at Digboi. The Government of Bombay, however, have only used the Act on two occasions. Once in 1929, immediately after it was passed, when it appointed the Pearson Court of Inquiry to enquire into the causes of the General Strike of 1929 in Cotton Mills in Bombay; and, for the second time in March 1940 when it appointed the Madgavkar Board of Conciliation in connection with the dispute between the Bombay Electric Supply and Tramways Company, Ltd., and its employees over the question of the grant of dearness allowances on account of increased cost of living owing to the war.

As has already been stated at the beginning of this section, events leading up to the passing of the Bombay Industrial Disputes Act in 1938 and the appointment of the Commissioner of Labour in the Bombay Presidency as the ex-officio Chief Conciliator have already been dealt with in the general survey. The scope of that Act has also been surveyed. Reference has also been made elsewhere to the excellent private conciliation and arbitration machinery which exists in the textile industry in Ahmedabad for the examination and settlement of all industrial disputes. It will be seen, therefore, that as in almost all the advanced industrial countries of the world, conciliation in India too has come to be regarded as a matter of first rate importance in the settlement of industrial disputes. The appointment of Labour Officers by the Millowners' Association, Bombay, and by the Government of Bombay have been followed by the creation of similar posts in almost all industrial Provinces in India and also in many Indian States.

STATISTICS OF INDUSTRIAL DISPUTES.

Statistics of industrial disputes in India have only been collected since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in man-days.

Industrial Disputes in India, 1921-39.

Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.	Year.	Number of disputes.	Number of workpeople involved.	Number of working days lost.
1921 ..	396	600,351	6,984,426	1930 ..	148	196,301	2,261,731
1922 ..	278	435,434	3,972,727	1931 ..	166	203,008	2,408,123
1923 ..	213	301,044	5,051,704	1932 ..	118	128,099	1,922,437
1924 ..	133	312,462	8,730,918	1933 ..	146	164,938	2,168,961
1925 ..	134	270,423	12,578,129	1934 ..	159	220,808	4,775,559

				1939 ..	406	409,189	4,992,795

N.B.—The statistics for the year 1940 had not been published when we went to Press.

MAJOR STRIKES IN INDIA DURING 1940-41.

1. *The Empress Mills and the Model Mills, Nagpur (Central Provinces and Berar):* As a protest against the findings of the Court of Inquiry appointed by the Government of the Central Provinces and Berar in concession with the dearness allowance dispute in cotton mills in Nagpur, about 14,000 workers of the Empress Mills struck work on the 8th April 1940. This strike spread to the Model Mills employing about 3,500 workers on 17th April. The Government thereupon decided to appoint another Committee of Inquiry to go into this question again. The strike in both these mills was called off as soon as the appointment of this Committee was announced and work was resumed in both mills from 25th April 1940.

2. *Strike in Six Collieries in the Jharia Coalfield (Bihar):* On 8th April, 1940, about 6,000 workers in the Jealgora, South Bailary, Bhaga, Bhowrah and Amlabad Collieries and in the Kenduadih Power House belonging to the East India Coal Company struck work on demands for increases in wages ranging from 14 to 37·5 per cent. The strikes in all the concerns collapsed within a short time on different dates and the strikers returned to work unconditionally.

3. *India Jute Mill, Serampore, Hooghly (Bengal):* The weavers of Mills No. 2 suspended work on 17th April, 1940, apprehending that some of them might be unjustly punished for bad cloth. This was treated by the management as a strike. On the next day the workers from Mills Nos. 1 and 3 also joined the strike and the total number of workers affected in all the three Mills was 6,180. Work was resumed on the 24th April through the intervention of the Labour Commissioner who arranged for an inquiry in conjunction with the Indian Jute Mills Association, into the causes of the strike and the grievances of the workers.

4. *Strike in three Collieries in the Jharia Coalfield (Bihar):* Strikes were declared at the Kustore, Burragarh and Kaska Collieries belonging to Messrs. Kilburn & Co. on the 29th April 1940. The total number of strikers was about 5,000. These strikes were called off on 7th August 1940 on the understanding that (1) the management would recognise a union of the labourers with outsiders as President and Secretary of the Union; (2) the management would take back all the strikers in their former posts within one month from the date of the termination of the strikes; and (3) the management would distribute any excess over 5 per cent. profit to the labourers as a bonus.

5. *The Empress Mills and the Model Mills, Nagpur (Central Provinces and Berar):* These two mills were again involved in a second big strike during the year. On the publication of the Report of the Committee of Inquiry referred to under the first item above, the management of the Empress Mills announced their intention to grant a dearness allowance at the rate of half an anna per day but they would not accept the Committee's recommendation to give an increase of one pie in this allowance for every rise of one per cent. in the cost of living index for Nagpur. The Model Mills expressed their financial inability to accept the Committee's recommendations. The Nagpur Textile Union did not accept the offer made by the management of the Empress Mills and they brought all the 14,000 day and night shift workers of this mill out on strike on the 3rd July 1940. The workers in the Model Mills followed suit. As a result of the intervention of H.E. the Governor of the Central Provinces and Berar in the matter, the management of the Empress Mills agreed to accept the Committee's recommendations *in toto* and all the workers in that mill resumed work from the 15th July, 1940. The strike in the Model Mills, however, continued till 1st September, 1940, when the workers went back to work on an undertaking given by the management of that mill that they would give a dearness allowance of half an anna per day with retrospective effect from 1st July, if the profits for the year were sufficient to enable this to be done.

6. *Fort William Jute Mills (Old and New), Howrah (Bengal):* The workers of the new mill struck work on 12th August as a protest against the refusal of the management to re-employ a worker on return from leave and they demanded that proper leave rules should be drawn up and published. The workers of the old mill joined the strike on the following day but wanted to resume work on the 14th. The management, however, refused to work only one mill and both the mills were, therefore, closed. Nearly 5,000 workers were affected. This strike ended on the 21st August when all the strikers resumed work unconditionally.

7. *Workers of the Calcutta Municipal Corporation, Calcutta (Bengal):* On the 26th August, 1940, 9,030 workers employed by the Calcutta Municipality struck work, among other things, for a 25 per cent. increase in wages. On 28th August, 8,920 workers were dismissed for having failed to resume work in accordance with a notice put up by the Corporation. By the 11th September, however, all the old workers except 1,250 who lost their jobs permanently on account of this strike were taken back as new recruits on trial.

8. *Government Harness and Saddlery Factory, Cawnpore (United Provinces):* Owing to a misunderstanding of a factory order regarding the National Labour Tribunal, the workers on night shift in the tailoring section staged a stay-in strike on 4th September, 1940. The strike subsequently spread to certain other sections of the factory and affected 5,000 workers in all. The authorities promised to look into the grievances of the workers only if they resumed work and all the strikers, thereupon, resumed work on the 9th September.

9. *Employees of certain Chinese Shoemakers, Calcutta (Bengal):* On 7th September, 1940, 2,500 workers in some large Chinese shoe-making factories in Calcutta struck work on a demand for an increase in wages. Within a few days 4,000 workers in other similar factories joined the strike. A settlement of the dispute was reached on 23rd September when increases of 6 pies and 3 pies on the piece rates per pair of adult persons' and children's shoes respectively were given.

THE INTERNATIONAL LABOUR ORGANIZATION.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-four further sessions were held till the end of the year 1939 and a total of sixty-seven Conventions were adopted. We give below, in serial order, the year and the place at which each of the twenty-five sessions of the Conference were held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter "G", Employers' Delegates by the letter "E" and Workers' Delegates by the letter "W". The names of the technical advisers to the Government, Employers' and Workers' Delegates have been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear alongside the titles, no action has been taken.

1st Session (Washington, 1919): Indian Delegation.—Government—Sir Atul Chatterjee and Sir Louis Kershaw; Employers—Sir Alexander Murray; Workers—Mr. N. M. Joshi.

Conventions.

1. Hours of Work (Industry)—(AB).
2. Unemployment—(C).
3. Childbirth.
4. Night Work (Women)—(AB).
5. Minimum Age (Industry)—(AB).
6. Night Work (Young Persons)—(AB).
   White Phosphorus—(D).

2nd Session (Geneva, 1920): G—Sir Louis Kershaw and Capt. D. F. Vines; Seamen's Delegate—Mr. A. M. Mazarello.

Conventions.

7. Minimum Age (Sea)—(E).
8. Unemployment Indemnity (Shipwreck) —(E).
9. Placing of Seamen.

3rd Session (Geneva, 1921): G—Sir Atul Chatterjee and Mr. I. N. Gupta; E—Sir Nowroji Saklatvala; W—Mr. N. M. Joshi; Secretary—Mr. A. G. Clow.

Conventions.

10. Minimum Age (Agriculture).
11. Right of Association (Agriculture)—(AC).
12. Workmen's Compensation (Agriculture).
13. White Lead (Painting).
14. Weekly Rest (Industry)—(AB).
15. Minimum Age (Trimmers and Stokers)—(AB).
16. Medical Examination of Young Persons (Sea)—(AB).

4th Session (Geneva, 1922): G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford; W—Mr. N. M. Joshi; Secretary—Mr. C. H. Silver.

5th Session (Geneva, 1923): G—Sir Dadiba M. Dalal and Sir Louis Kershaw; E—Sir Joseph Kay; W—Mr. K. C. Roy Chowdhury.

6th Session (Geneva, 1924): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Alexander Murray; W—Mr. Joseph Baptista.

7th Session (Geneva, 1925): G—Sir Atul Chatterjee and Sir Louis Kershaw: E—Sir Thomas Smith; W—Mr. N. M. Joshi; Secretary—Mr. R. N. Gilchrist.

Conventions.

17. Workmen's Compensation (Accidents).
18. Workmen's Compensation (Occupational Disease)—(AC).
19. Equality of Treatment (Accident Compensation)—(AB).
20. Night Work (Bakeries).

8th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. Lajpat Rai; Secretary—Mr. R. N. Gilchrist.

Conventions.

21. Inspection of Emigrants—(AC).

9th Session (Geneva, 1926): G—Sir Atul Chatterjee and Sir Louis Kershaw; E—Sir Arthur Froom; W—Mr. M. Daud; Secretary—Mr. R. N. Gilchrist.

Conventions.

22. Seamen's Articles of Agreement—(AB).
23. Repatriation of Seamen.

10th Session (Geneva, 1927): G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr. R. P. Paranjpe (Substitute); E—Mr. G. D. Birla, W—Mr. V. V. Giri; Secretary—Mr. S. Lall.

Conventions.

24. Sickness Insurance (Industry, etc.).
25. Sickness Insurance (Agriculture).

11th Session (Geneva, 1928): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. J. C. Walton (Substitute); E—Mr. Narottam Morarjee; W—Mr. Diwan Chaman Lall; Secretary—Dr. R. C. Rawlley.

Conventions.

26. Minimum Wage Fixing Machinery.

12th Session (Geneva, 1929): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe, and Mr. A. G. Clow (Substitute); E—Mr. Kasturbhai Lalbhai; W—Mr. N. M. Joshi; Secretary—Mr. A Dibdin.

Conventions.

27. Marking of Weight (Packages Transported by Vessels)—(AB).
28. Protection against Accidents (Dockers).

13th Session (Geneva, 1930): G—Sir Atul Chatterjee and Sir Geoffrey Corbett and Mr. C. W. A. Turner (Substitute); E—Mr. Jadunath Roy; W—Mr. M. Daud; Secretary—Mr. C. W. A. Turner.

14th Session (Geneva, 1930): G—Sir Atul Chatterjee and Dr. R. P. Paranjpe and Mr. A. Latiff (Substitute); E—Mr. A. L. Ojha; W—Mr. S. C. Joshi; Secretary—Mr. G. Graham Dixon.

Conventions.

29. Forced Labour.
30. Hours of Work (Commerce and Offices).

15th Session (Geneva, 1931): G—Sir Atul Chatterjee and Mr. A. G. Clow; E—Mr. Walchand Hirachand; W—Mr. R. R. Bakhale; Secretary—Mr. N. A. Mehrban.

Conventions.

31. Hours of Work (Coal mines).

16th Session (Geneva, 1932): G—Sir Bhupendra Nath Mitra and Sir Atul Chatterjee; E—Mr. Shanmukham Chetti; W—Mr. Diwan Chaman Lall; Secretary—Mr. K. R. Menon.

Conventions.

32. Protection Against Accidents (Dockers) (Revised, 1932)—(D).
33. Minimum Age (Non-Industrial Employment).

17th Session (Geneva, 1933): G—Sir Atul Chatterjee and Mr. J. F. Gennings; E—Sir Phiroze C. Sethna; W—Mr. Aftab Ali; Secretary—Mr. K. R. Menon.

Conventions.

34. Fee-Charging Employment Agencies.
35. Old-Age Insurance (Industry, etc.).
36. Old-Age Insurance (Agriculture).
37. Invalidity Insurance (Industry, etc.).
38. Invalidity Insurance (Agriculture).
39. Survivors' Insurance (Industry, etc.).
40. Survivors' Insurance (Agriculture).

18*th Session* (Geneva, 1934): G—Sir Bhupendra Nath Mitra and Mr. A. G. Clow; E—Seth Kasturbhai Lalbhai; W—Mr. Jamnadas M. Mehta; Secretary—Mr. A. Dibdin.

Conventions.

41. Night Work (Women) (Revised)—(AB).

42. Workmen's Compensation (Occupational Diseases) (Revised).

43. Sheet-Glass Works.

44. Unemployment Provision.

19*th Session* (Geneva, 1935): G—Sir Bhupendra Nath Mitra and Sir Joseph Bhore; E—Mr. H. A. Lalljee; W—Mr. V. M. Ramaswami Mudaliar; Secretary—Mr. S. R. Zaman.

Conventions.

45. Underground Work (Women)—(A).

46. Hours of Work (Coal Mines) (Revised).

47. Forty-Hour Week.

48. Maintenance of Migrants, Pension rights.

49. Reduction of Hours of Work (Glass-Bottle Works).

20*th Session* (Geneva, 1936): G—Sir Bhupendra Nath Mitra and Mr. S. N. Roy; E—Sir H. M. Mehta; W—Rao Sahib R. W. Fulay; Secretary—Mr. S. R. Zaman.

Conventions.

50. Recruiting of Indigenous Workers.

51. Reduction of Hours of Work (Public Works).

52. Holidays with Pay.

21*st Session* (Geneva, 1936): G—Sir Firoz Khan Noon and Mr. A. Dibdin; E—Mr. M. A. Master; W—Mr. Aftab Ali; Secretary—Mr. A. F. Morley.

Conventions.

53. Officers' Competency Certificates.

54. Holidays with Pay (Sea).

55. Shipowners' Liability (Sick and Injured Seamen).

56. Sickness Insurance (Sea).

57. Hours of Work and Manning (Sea).

22*nd Session* (Geneva, 1936): Same Delegation as at the 21*st Session*.

Conventions.

58. Minimum Age (Sea).

23*rd Session* (Geneva, 1937): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E—Sir Hormusjee P. Mody; W—Mr. S. C. Sen; Secretary—Mr. S. R. Zaman.

Conventions.

59. Minimum Age (Industry) (Revised).

60. Minimum Age (Non-Industrial Employment) (Revised).

61. Reduction of Hours of Work (Textiles).

62. Safety Provisions (Building).

24*th Session* (Geneva, 1938): G.—Sir Firoz Khan Noon and Sir Frank Noyce; E—Lala Shri Ram; W—Mr. S. V. Parulekar, M.L.A. (Bombay); Secretary—Mr. M. Ikramullah.

Conventions.

63. Convention concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture.

25*th Session* (Geneva, 1939): G.—Sir Firoz Khan Noon and Sir Frank Noyce: E.—Mr. M. L. Dahanukar; W.—Mr. R. S. Nimbkar; Secretary—Mr. M. Ikramullah.

Conventions.

64. Convention concerning the regulation of written contracts of employment of indigenous workers.

65. Convention concerning penal sanctions for breaches of contracts of employment by indigenous workers.

66. Convention concerning the recruitment, placing and conditions of labour of migrants for employment.

67. Convention concerning the regulation of hours of work and rest periods in road transport.

A = Unconditional ratification.

B = Legislative or other measures passed since the adoption of the Convention.

C = Legislative or other measures anterior to the adoption of the Convention by the Conference.

D = Legislation passed.

E = Legislation in progress or in preparation.

India has ratified the following Conventions unconditionally; (1) Hours of Work in Industries; (2) Night Work (Women); (3) Night Work (Young Persons); (4) Right of Association (Agriculture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Inspection of Emigrants; (11) Marking of Weight (Packages transported by vessels); (12) Night Work (Women) (Revised). India's ratification of the Unemployment Convention has lapsed. In addition, legislative or other measures were passed in India with reference to the application of the following conventions: (1) Hours of Work (Industry); (2) Night Work (Women); (3) Night Work (Young Persons); (4) Right of Association (Agriculture); (5) Weekly Rest (Industry); (6) Minimum Age (Trimmers and Stokers); (7) Medical Examination of Young Persons (Sea); (8) Workmen's Compensation (Occupational Diseases); (9) Equality of Treatment (Accident Compensation); (10) Seamen's Articles of Agreement; (11) Marking of Weight (Packages Transported by Vessels); and (12) Night Work (Women) (Revised). In addition, legislation is either in progress or under preparation in connection with the following Conventions: (1) Minimum Age (Sea); and (2) Unemployment Indemnity (Shipwreck).

The Twenty-Sixth Session of the International Labour Conference which had been fixed for Monday, the 3rd June 1940 was postponed, *sine die*, on account of the War. But, approving the recommendations made in two reports of its Emergency Committee, the Governing Body of the International Labour Office decided that even during the period of the war, the I.L.O. should endeavour to maintain the fullest possible activity and function in its present premises at Geneva unless this proved impossible. At a subsequent meeting held in Geneva in May, 1940, however, the Governing Body decided that it was precisely at a time when international meetings were becoming more infrequent and communications more difficult that the work of the International Labour Office and its representatives abroad assumed increased importance. It was just in these circumstances that the I.L.O. must continue to remain a world centre of information on labour and social problems, that the various publications of the office should be continued and that all such activities as were not hindered by the war should be maintained unimpaired. Both for these reasons and on account of the difficulties in maintaining regular postal communications with Geneva owing to the exigencies of the war situation, the Governing Body decided to set up a working centre of the I.L.O. at the McGill University in Montreal, Canada, with effect from September 1940. The work of collection and distribution of information regarding labour and social conditions throughout the world is being continued from this centre and plans have been made for carrying on unimpaired, as far as conditions permit, all the manifold activities of the Organization. The Indian Branch of the I.L.O. of which Dr. P. P. Pillai, Ph. D., is the Director, will therefore maintain its activities unimpaired and continue to function in its office at New Delhi.

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS.

The central co-ordinating authority in India for questions connected with labour in most industries is the Department of Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway workshops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act, the central executive authority for which is the Department of Labour; but, apart from the control which this Department and the Provincial Governments exercise over railway workshops and running sheds, all classes of railway labour are under the control of the Railway Board which is itself under the control of the Department of Communications. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fell within the scope of the provincial legislatures and although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the local Governments who have to bear the entire cost of administration as it is not permissible under the constitution, for the central Government to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the local Governments to labour measures on which their views have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the central legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control; and, secondly these Acts in most cases reserve certain power to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The central Government in the Department of Labour however maintains control in connection with the Indian Mines Act.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development, the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. The whole question was discussed threadbare at the various Round Table Conferences which were held in London in connexion with the new reforms; and Mr. N. M. Joshi who represented the interests of Indian Labour at these conferences pressed that as far as possible labour legislation should be a federal subject. Owing largely to Mr. Joshi's efforts, the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures:—

(1) Factories; regulation of the working of mines, but not including mineral development;

(2) Welfare of labour; provident funds; employers' liability and workmen's compensation;

(3) Trade Unions; industrial and labour disputes.

THE CENTRAL GOVERNMENT.

Reference has already been made to the establishment by the Government of India of a special Labour Bureau in 1920 and to the abolition of this office in 1923 in pursuance of a recommendation made in the matter by the Indian Retrenchment Committee. The Department of Labour has, however, endeavoured to carry on as much as possible of the work of that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all-India enquiries into wages and conditions of employment in Indian industries. The present executive staff of the Department of Labour is as follows :—

Member-in-charge: The Honourable DIWAN BAHADUR SIR A. RAMASWAMI MUDALIAR, KT. (This member also holds the Commerce Portfolio.)

Secretary : The Honourable Mr. H. C. PRIOR, C.I.E., I.C.S.

Deputy Secretary : H. TUFNELL BARRETT, I.C.S.

Additional Deputy Secretary : S. H. ZAHER, I.C.S.

Under Secretaries : P. MADHAVA MENON, I.C.S. and W. G. LAMARQUE, I.C.S.

BENGAL.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws generally were administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency as well as of labour organisations. From time to time as circumstances required it was intended that he should conduct special enquiries but owing to financial stringency, Government could not provide him with adequate staff for the purpose. The Intelligence Officer was also the Deputy Secretary to the Government of Bengal in the Commerce Department and after the coming into effect of the Trade Unions Act, 1926, he was also appointed Registrar of Trade Unions. The Royal Commission on Indian Labour recommended that Bengal should have a properly staffed Labour Office on the same lines and with at least the same staff as the Labour Office of the Government of Bombay; but owing to financial stringency, it was not possible to give effect to this recommendation earlier than 1939; but in order to cope with the increased administrative work in connexion with matters relating to Labour, the Government of Bengal have how appointed a whole-time Labour Commissioner who has been relieved of all work in the Secretariat. An Assistant Commissioner of Labour has also been appointed. The Labour Commissioner and the Assistant Labour Commissioner have also been appointed as Conciliation Officers under the Indian Trade Disputes (Amendment) Act. Besides promoting the settlement of strikes and lockouts, they will also enquire into and settle other minor disputes. The Labour Office of the Government of Bengal has now been reorganized and five Labour Officers have also been appointed.

The Government of Bengal appointed an officer of the Indian Civil Service as an Employment Officer to investigate the problem of unemployment in the Province and to suggest remedial measures. This officer completed his survey of the state of employment in the various trades, industries and public utility undertakings in 1939 with special reference to the proportion of Bengali and non-Bengali employees and the prospects of further absorption of Bengalis, particularly of the educated classes, therein. With the facts and figures collected in the course of the inquiry two landbooks of employment have been published giving comprehensive information about the prospects of employment in various Government Services including the Army, the Navy and the Air Force, and in important trades and industries.

The Government of Bengal have approved the scheme of the Board of Economic Inquiry for conducting an Industrial Family Budget Inquiry in five zones for the whole of the Province at an estimated cost of Rs.30,000. The Board decided that the entire amount of the grant should be placed at the disposal of the Indian Statistical Institute and that the actual work would be conducted under the immediate guidance of Prof. P. C. Mahalanobis, I.E.S., Secretary to the Institute. The object of the inquiry is that the industrial areas of the Province should be divided into a number of zones and that for each zone one main set of cost of living index numbers should be prepared with separate sets for particular industries for which separate figures may be needed for administrative and other purposes. The five zones are to be covered in a gross period of five years. As a preliminary to this, enquiries have already been completed to make lists of the principal industrial areas of the Province, the classes of employees to be covered and the range of wages in the principal industries.

The Workmen's Compensation Act is administered by the Commissioner for Workmen's Compensation who is also the authority under the Payment of Wages Act, 1936. The Indian Mines and the Trade Disputes Acts and the Bengal Workmen's Protection Act, 1934, are administered by the Commerce Department which since the 1st April 1937 has been renamed the Commerce and Labour Department.

The growth of healthy trade unionism has received much attention and rules to regulate the recognition of *bona fide* trade unions have been framed. An amendment of the Bengal Trade Union Regulations to empower the Registrar of Trade Unions to exercise greater control over registered trade unions with a view to the prevention of mal-administration of their affairs, so often complained of, is also under consideration. A Bill to amend the Bengal Workmen's Protection Act, 1935, with a view to make loitering outside workshops with the object of recovering debts from workers punishable was passed in 1940. A Bill to provide for the compulsory collection of industrial and labour statistics has been drawn up and is now being considered by Government.

The Bengal Shops and Establishments Act, 1940, was brought into effect from 1st April 1941. The Assistant Commissioner of Labour, Bengal, has been appointed Chief Inspector under this Act.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The only action taken by the Government of Bengal under the Indian Trade Disputes Act during the year 1940 was the appointment of a Court of Inquiry appointed in connection with a dispute arising out of the dismissal of certain workers of the Bally Jute Mills, Howrah, and alleged prevalence of bribery and corruption in matters connected with the appointment and payment of workers in the mill. The personnel of the Labour Department of the Government of Bengal is as follows :

Minister-in-charge of Labour : The Honourable MR. H.S. SUHRAWARDY.

Jt. Secretary, Commerce and Labour Department : M. K. KIRPALANI, I.C.S.

Labour Commissioner and Registrar of Trade Unions : W. A. S. LEWIS, I.C.S.

Assistant Labour Commissioner : KHAN SAHEB S. A. E. B. MURSHEDI.

Commissioner for Workmen's Compensation Act and Authority under the Payment of Wages Act : S. N. MODAK, I.C.S.

Labour Officers : A. TALEB, K. M. AZAD, D. CHATTERJEE, G. MOBARAK and S. B. DATTA.

Chief Inspector of Factories : J. B. MCBRIDE, A.M.I. (Mech.) E., O.B.E.

Certifying Surgeon : H. C. G. POWNES.

MADRAS.

The Government of Madras appointed a Labour Commissioner in the year 1920 primarily to organise and control the operations for the betterment of the condition of the Depressed Classes in the Madras Presidency, especially in regard to provision of water supply, assignment of lands, acquisition of house sites, education through special schools and grant of assistance in the form of scholarships and boarding grants. The administration of Criminal Tribes Settlements was also placed under him. He was also to watch and study at all times the conditions of labour, particularly industrial labour, throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The duty of settling labour disputes by negotiation before their culmination in strikes or lockouts or after is now entrusted to him by the Government in an increasing measure. He is consulted by both labour organisations and employers in regard to Trade Union Law, the Factories Act, the Payment of Wages Act, and the Madras Maternity Relief Act. He is appointed Chief Inspector of Factories, Commissioner for Workmen's Compensation and Registrar of Trade Unions, and is also responsible for the administration of the Payment of Wages Act and the Madras Maternity Relief Act. For the administration of the Factories Act he has a Technical Personal Assistant at headquarters who is also in charge of the Madras Factories Circle. The Labour Commissioner in Madras has no special statistical office to deal with Labour statistics and no reports have been published of any special enquiries into questions connected with industrial labour in the Presidency. The conduct of the Quinquennial Census into Agricultural wages has been placed in his hands, and with the introduction of the Payment of Wages Act, a beginning has been made for a more accurate collection of industrial wages statistics for inclusion in the Factories Act Administration Report.

The Labour Office in Madras published a very interesting Report of an Enquiry into the Family Budgets of Industrial Workers in Madras City in 1938 and another Report entitled "Madras Labour—July 1937 to October 1938" in 1939.

Adviser to H. E. The Governor on Labour: T. G. RUTHERFORD, C. S.I.,C.I.E., I.C.S.

Commissioner of Labour : V. RAMAKRISHNA, M.A. B.SC., I.C.S. (This officer is also Commissioner for Workmen's Compensation : Registrar of Trade Unions, Chief Inspector of Factories and the authority under the Payment of Wages Act.)

Labour Conciliation Officers : K. S. KRISHNA-SWAMI AYYANGAR (at Coimbatore) and R. JAGANNADHAM NAIDU (at Bimlipatam).

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well-being of the industrial labour employed in the Province ; and the real pioneer work in the field of labour information and statistics in India during the last twenty years has been done by the Bombay Labour Office which was established in 1921 by the late Lord Lloyd, then Governor of Bombay. In the Government resolution announcing the establishment of this office the following were declared to be its functions :—

"(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters ;

"(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise ; and

"(3) *Legislation and other matters relating to Labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of a Director of Labour. The post of the Director of Labour was, however, abolished in 1926 and the Labour Office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to "Commissioner of Labour and Director of Information." With this change in designation the administrative control of the Factory and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Mr. J. F. Gennings, C.I.E., O.B.E., Barrister-at-Law, held charge of the work of the Labour Office from July 1926 to the 10th May 1939 when he went on leave preparatory to retirement. With the departure of Mr. Gennings, the posts of the Commissioner of Labour and Director of Information have been separated and the Information Office was placed in charge, first of the Public Relations Officer and later of a new Director of Information. Under the Bombay Industrial Disputes Act, 1938, the Commissioner of Labour has also been appointed ex-officio Chief Conciliator. In addition to the Commissioner there are four gazetted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth is the Assistant Commissioner of Labour at Ahmedabad. There are also three full time lady Investigators but these are not gazetted appointments. The office staff contains three Statistical Superintendents, four senior clerks, thirteen junior clerks; two stenographers, one typist, one cashier, one despatcher and one daftari. The activities of the office comprise (1) prices and cost of living, (2) Wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette* and (12) library.

The *Labour Gazette* has been published monthly since September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Province of Bombay, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India.

In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Province of Bombay, for industrial disputes and for workmen's compensation, prosecutions under the Indian Factories Act, and the employment situation. Quarterly information is collected with regard to all known trade unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months.

A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodicals received from Labour Ministries, and International and research organisations in various parts of the world. The present staff of the Department is as follows:—

Adviser to H. E. The Governor on Labour: C. H. BRISTOW, C.I.E., I.C.S.

Industrial Court: President: The Hon'ble Mr. Justice H. V. DIVATIA; *Members:* G. S. RAJADHYAKSHA, I.C.S., District and Sessions Judge, Ahmedabad, and B. K. DALVI, District and Sessions Judge, Sholapur.

Commissioner of Labour, Commissioner for Workmen's Compensation, Chief Conciliator, Bombay Industrial Disputes Act and Registrar of Trade Unions:—D. S. BAKHLE, I.C.S.

Honorary Commissioner for Amenities to Industrial Labour: GULZARILAL NANDA, M.A., LL.B., M.L.A.

Registrar of Unions, Bombay Industrial Disputes Act: N. A. MEHRBAN, M.B.E., F.S.S.

Labour Officers: M. P. LABOUCHARDIERE, I.P. (for the Local Areas of Bombay City, Bombay Suburban District and Thana with headquarters in Bombay); A. S. BANAVALIKAR (for the Local Areas of Ahmedabad, Viramgam, Nadiad, Broach, Surat, and Gogha with headquarters at Ahmedabad); M. S. WARTY (for the Local Areas of Jalgaon, Dhulia, Chalisgaon, Malegaon and Amalner with headquarters at Jalgaon); and S. S. REGE (for the Local Areas of Sholapur, Poona, Barsi, Tikekarwadi, Hubli, Belgaum, Gokak, Gadag, Satara and Karad with headquarters at Sholapur).

Assistant Commissioners of Labour and Conciliators, Bombay Industrial Disputes Act, 1938: S. R. DESHPANDE, M.B.E., B.Litt. (Oxon.); N. A. MEHRBAN, M.B.E., F.S.S.; S. V. JOSHI, B.A. (Cantab.); and A. S. IYENGAR. Mr. Iyengar is stationed at Ahmedabad. Mr. Joshi is also Assistant to the Registrar of Trade Unions.

Chief Inspector of Factories: T. W. JOHNSTONE, O.B.E.

Labour Welfare Officer: E. J. S. RAM.

Lady Welfare Worker: Miss P. G. DAVID.

PUNJAB.

In the Punjab, the Director of Industries ordinarily looks after all necessary matters in connexion with Labour. He is also the Registrar of Trade Unions. The Workmen's Compensation Act is administered by the Senior Subordinate Judges at Lahore, Ferozepur, Amritsar, Lyallpur, Ambala, Multan, Rawalpindi and Sargodha and by the Deputy Commissioners in the other Districts. The Punjab Trade Employees Act, 1940, has been enforced in the Punjab with effect from 1st March 1941. This Act regulates the hours of work of shop assistants and commercial employees and provides for their holidays, wages and terms of service. It is administered by the Director of Industries,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Punjab, through the Chief Inspector of Shops and Commercial Establishments and 15 Inspectors. Its Scope is, however, limited for the present to the Municipal and Cantonment limits of Lahore, Amritsar, Sialkot, Ferozepore, Rawalpindi and Multan and to the Municipal limits of Ludhiana, Lyallpur, Jaranwalla, Gojra, Simla and Okara.

During the year 1940-41 only one Court of Inquiry was set up by the Government of India to inquire into the affairs of the miners of the Khewra Salt Mines. Mr. S. R. Deshpande, M.B.E., Assistant Commissioner of Labour, Bombay was appointed as the sole member of the Court. The inquiry was to cover adequacy of present wages, unemployment relief, improvement in conditions of service, proper assessment and payment of workmen's compensation and the creation of a healthier atmosphere between rival unions of the workers. Mr. Deshpande submitted his report to the Government of India on 30th April 1941.

Retail prices of articles of food, clothing, fuel and lighting and certain miscellaneous goods entering the family budgets of industrial workers in the Punjab and working class cost of living index numbers are published monthly in the *Punjab Government Gazette*. Annual figures are published in the form of a report by the Board of Economic Enquiry. During the year 1938 the Government of Punjab adopted a three year plan for a complete industrial survey of the Province. The systematic industrial survey of the Punjab industrywise and districtwise undertaken by the Department made steady progress during the year 1940-41. The survey of the Ludhiana District was completed and the Report is under the consideration of Government. Surveys of the Districts of Amritsar, Sialkot, Lahore, Multan and Muzaffarbagh have been completed and the reports are under compilation. The surveys of oil seeds, tanning and pottery industries have been completed. The reports of the first two were ready in May 1941 whilst that for the third was in hand.

Reports of these surveys will be published in due course. The personnel of the administrative staff of the Government of Punjab dealing with matters connected with Labour is as follows:

Minister for Development and Labour: The Hon'ble Sir CHAUDHRI CHHOTU RAM.

Secretary to Government for Labour: S. K. KIRPALANI, I.C.S.

Director of Industries and Registrar of Trade Unions.—M. H. MAHMOOD, B.A. (Oxon.), Barrister-at-Law.

Chief Inspector of Factories: C. W. STOWERS.

CENTRAL PROVINCES.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Director of Industries is in immediate charge of all matters relating to labour. He was also Registrar of Co-operative Credit Societies but the two posts were separated during the year 1940. The Factory Office is also under his general supervision. As regards the question of administration in connexion with labour and labour legislation, a separate Labour Office has been established under the charge of a Labour Officer who is also an Inspector of Factories in addition. He investigates into labour disputes, collects necessary statistics and works as a Conciliation Officer in case of trade disputes. The wage census of the cotton textile industry undertaken by the Labour Office was completed during the year 1940 but its results have been preserved for departmental use and have not been published. The wage census of the Potteries, Cement and Oil Seed crushing industries was taken up during the year 1941. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board but the Board acts purely in an advisory capacity.

Adviser to H. E. The Governor on Labour: ANTHONY LOCKHART BINNEY, C.I.E., I.C.S., *vice* Sir GEOFFREY POWNALL BURTON, K.C.I.E., I.C.S. (*On leave*).

Director of Industries and Registrar of Trade Unions: K. D. GUHA, M.Sc. (L'pool).

Chief Inspector of Factories: P. T. KOMAN NAYAR, B.A., B.Sc. (Tech.).

Labour Officer: V. R. REGE.

UNITED PROVINCES.

In the United Provinces almost all departments of the local Government dealt with various phases of questions connected with labour up to the end of 1934. Labour as such was with the Home Member, electricity was with the Finance Member, the factory inspection staff was under the control of the Director of Industries, boiler inspection was under the control of the Public Works Department. The Registrar of Co-operative Societies was appointed ex-officio Registrar of Trade Unions. In 1935, however, a more unifying policy was adopted and the Director of Industries was appointed Director of Statistics and ex-officio Commissioner of Labour for the general administration of all questions connected with labour. The assumption of office by the Congress in this Province on July 19th 1937 was heralded with serious labour troubles in Cawnpore. The Hon'ble the Prime Minister announced his intention to appoint a special officer to deal with labour disputes as they arose from day to day and to bring forward legislation on the lines of the Bombay Trade Disputes Conciliation Act, 1934. Dr. R. B. Gupta, M.A., Ph.D. (Econ.), was appointed Labour Officer in August 1937 to settle industrial disputes and to act as a welfare officer in the broadest sense of the term.

Following the recommendations of the Cawnpore Labour Inquiry Committee, Mr. P. M. Khareghat, C.I.E., I.C.S., Secretary to Government in the Department of Industries, was appointed Labour Commissioner in addition to his own duties about the middle of the year 1938. The Labour Commissioner was to visit Cawnpore every week and endeavour, through conciliation, to get the parties concerned to settle the industrial disputes referred to him. The services of Mr. Khareghat having been placed at the disposal of the Government of India on his appointment as the Vice-Chairman of the Imperial Council of Agricultural Research, Mr. Vishnu

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sahay, I.C.S., Cane Commissioner, was appointed Commissioner of Labour in addition to his own duties in March 1939. Thereafter, until 17th April 1940, the post of Commissioner of Labour was held by Mr. A. N. Sapru, I.C.S., Director of Industries, in addition to his own duties. The Government of Punjab have now appointed a full-time Commissioner of Labour who, like the Commissioner of Labour in Bombay, is to hold all the statutory appointments connected with Labour. The Labour Office of the United Provinces has been made permanent with effect from 1st April, 1941. The work of the Office has been defined under the following four main heads: (1) Settlement of industrial disputes and disposal of individual complaints received from workmen or their organizations; (2) Collection, compilation and publication of statistics of prices, wages, hours of work and conditions of employment; (3) Superintendence, direction and control of Labour Welfare Work; and (4) Publication of a monthly "Labour Bulletin" on the lines of the Bombay "Labour Gazette." The first issue of this Bulletin came out in January 1941.

An enquiry into family budget and housing conditions of mill workers in Cawnpore was conducted by the Labour Officer in 1938-39 and more than 1,400 budgets were collected with the help of six investigators. The results of the inquiry are in process of compilation. The personnel of the Labour Department in the U.P. is as follows:

Adviser to H. E. The Governor on Labour: DR. PANNA LAL, M.A., B.Sc. (Cantab.), D. Litt. (Agra), Barrister-at-Law, C.I.E., I.C.S.

Labour Commissioner, Registrar of Trade Unions, Commissioner for Workmen's Compensation and Officer-in-Charge of the Factories and Boiler Departments, Chairman, Sugar Commission, United Provinces and Bihar: J. E. PEDLEY, C.I.E., M.C., I.C.S.

Chief Inspector of Factories and Boilers: K. K. BATLIWALA, M.I. MAR. E., A.INST. NAV. E.

Labour Officer: Dr. R. B. GUPTA, M.A., Ph. D. (Econ.).

SIND.

Consequent on the introduction of Provincial Autonomy in India with effect from 1st April, 1937, Sind was separated from the Presidency of Bombay and made into a separate Province. The new Government of Sind modelled its administration of all labour question on Bombay and created a Labour Office with a special Commissioner of Labour who was also appointed Registrar of Trade Unions. The Labour Office compiles monthly price index numbers of wholesale and retail prices in Karachi and annual index numbers of agricultural wages and retail prices in Sind. In July, 1940, the Government of Sind constituted an Advisory Board of Labour consisting of persons interested in labour matters for promoting better relations between employers and employees and to advise Government on labour matters in general. The Honourable Minister holding the Education Portfolio is the Chairman and the Commissioner of Labour is Secretary. There are eighteen other members of the Board and its functions are to examine labour problems and to conduct surveys on all questions connected with labour, to devise schemes for the development of better relations between employers and employees and to offer expert opinion and advice to Government on all important matters concerning labour. In May 1940, the Commissioner of Labour was appointed Conciliation Officer for the Province of Sind under Section 18-A (1) of the Trade Disputes Act, 1929, for the purpose of mediating in or promoting the settlement of trade disputes in all industrial undertakings in Sind except Railways and Central Government undertakings. In March 1941, the Government of Sind opened a Government Labour Exchange in Karachi and appointed the Commissioner of Labour as Labour Exchange Officer. Names of the unemployed are registered and whenever vacancies are found in factories and other workshops placements are made. Following the action in the matter taken by the Government of Bombay, the Government of Sind has also decided to open a Labour Welfare Department and to start two labour welfare centres in labour class localities in Karachi. The posts of Chief Inspector of Steam Boilers and Smoke Nuisances and Inspector of Factories are held by one officer in Sind who is also an Inspector under the Payment of Wages Act. Further, all District Magistrates in Sind have been appointed Inspectors under that Act. The Workmen's Compensation Act is administered by the Sub-Judges in the mofussil and the Judge of the Small Causes Court in Karachi who have been appointed ex-officio Commissioners for Workmen's Compensation. The following is the personnel of the Labour Department in Sind:

Minister for Labour: The Hon'ble PIR ELLAHI BUX NAWAZALI, M.A., LL.B.

Commissioner of Labour and Registrar of Trade Unions: M. A. SAYYID, B.A. (Hons.) (Oxon.), M.A., LL.B., J.P.

Chief Inspector of Factories and Boilers: A. J. TUFFIELD, A.M.I.M.E.

BIHAR.

It will be recalled that the Government of Bihar appointed a Labour Inquiry Committee in March 1938. This Committee submitted its Report to Government in June 1940 and this was released for publication in the month of August 1940. A full summary regarding the appointment of this Committee and the more important recommendations made by it has already been given in an earlier note in this Section. One of the recommendations made by the Committee was that the Government of Bihar should establish, without delay, a Labour Office on the lines of that established in Bombay with a permanent Commissioner of Labour. The Government of Bihar has accepted this recommendation and a Labour Office on the lines of the Bombay Labour Office was created early in the year 1941. In September 1940, the Government of Bihar published the Report of a Family Budget Enquiry conducted at the Coal Fields at Jharia by Prof. S. R. Bose, M.A., B.Sc. (London), Professor of Economics, Patna College, with the assistance of 20 Economics students of the Patna College. This Report can be obtained from the Superintendent,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government Printing, Bihar, Patna. The Government of Bihar appointed a Board of Conciliation under the Trade Disputes Act, 1929, in August 1940 in connection with a trade dispute between the Tata Iron and Steel Company at Jamshedpur and the Tata Worker's Union on the question of Dearness Allowance. Full details regarding the settlement reached in this dispute have been given in an earlier note under the heading of "Dearness Allowances." No other Courts of Inquiry or Boards of Conciliation were appointed in this Province during the years 1940 and 1941. The personnel of the Labour Department of the Government of Bihar is as follows :—

Adviser to H. E. The Governor on Labour : R. E. RUSSELL, C.I.E., I.C.S.

Commissioner of Labour : S. N. MAZUMDAR, I.C.S.

Labour Assistant : V. SHUKLA.

Registrar of Trade Unions : A. J. MAINWARING, C.I.E., I.C.S.

Chief Inspector of Factories : H. M. RAI.

OTHER PROVINCES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the local Government are not very actively interested in the special consideration of other labour questions. Notwithstanding this, however, the Government of Assam has obtained the approval of the Government of India and the vote of the Legislature for appointing the Controller of Emigrant Labour as part-time Labour Commissioner, with a whole-time Assistant. The Assam Labour Office is likely to be created some time during the year 1941. In Assam, J. N. TALUQDAR, I.C.S., is the present Controller of Emigrant Labour, but as no Trade Unions have as yet been registered in the Province there is no Registrar of Trade Unions functioning but for the purposes of the Act the Registrar of Joint Stock Companies is ex-officio Registrar of Trade Unions. Labour conditions in Orissa and the North-West Frontier Province are not considered such as to justify the appointment of Labour Commissioners. In Orissa, the Revenue Commissioner (E. R. WOOD, C.I.E., M.C., I.C.S.), is the Registrar of Trade Unions. In the North-West Frontier Province, the Secretary to Government in the Legislative Department has been entrusted with the work of industrial and labour disputes and Khan Saheb SHEIKH ABDUL HAMID KHAN is the Registrar of Trade Unions. In Ajmer-Merwara, the Additional Assistant Commissioner, Ajmer, is Registrar of Trade Unions.

LABOUR IN INDIAN STATES.

During recent years there has been a growing tendency among employers in British India, especially in the cotton textile industry, to complain that certain capitalists are endeavouring to avoid the restrictive conditions imposed on them and the ameliorative benefits granted to Labour by Labour Legislation in British India by establishing mills or factories in the territories of Indian States. Whilst it may be true that many of the smaller States have no labour legislation of any kind, it is interesting to observe that most of the larger States such as Hyderabad, Baroda, Gwalior, Mysore, Indore, Travancore and Cochin have recently achieved notable progress in bringing factory conditions in these States into line with those in British India. We give a brief resume of the measures adopted in some of these States below.

MYSORE.

Mysore is one of the most industrialised States in India. As on 1st July 1940 there were 370 large industrial concerns employing a total of 66,020 persons working in the State. Of these, 88 were textile concerns, 19 engineering, 21 minerals and metals including the Kolar Gold Mines employing about 25,000 workers, 88 food industries, 26 chemicals and dyes, 22 paper and printing, 25 gins and presses, one glass and enamel works and 88 miscellaneous concerns. Two hundred and seventy-seven of these concerns employing 24,486 men, 4,479 women and 1,077 children or a total of 30,042 workers in all have been brought within the purview of the Mysore Factories Act.

Mysore was one of the first of the Indian States to adopt a Factories Act. This was first passed in the year 1914 and was amended in 1925 and again in 1936. Act I of 1936 now in force in the State embodies almost all the recommendations made by the Royal Commission on Indian Labour and it is also in conformity with the British Indian Factories Act. The weekly hours of work in the majority of the non-seasonal and seasonal factories did not exceed 54 and 60 hours respectively. With a view to regulating hours of work, weekly holidays and conditions of employment in unregistered factories and in order to prevent the exploitation of child labour, an amendment of the Factories Act so as to include all factories employing ten or more persons within the definition of "Factory", and the enactment of an Act regulating the employment of children, are, at the moment, under the consideration of Government. Mining legislation was first enacted in the State in 1897. This was amended in 1900 and again in 1906. Special provision has been made in the Mysore Mines Act to protect the workpeople from danger to life and the securing of their safety. Mining labour is employed in three shifts of 8 hours each. A Sanitary Board has been constituted in the area of the Kolar Gold Fields to secure for mines workers sanitary and healthy conditions of living. A Workmen's Compensation Act covering all manual labour in employment other than of a casual nature or in a clerical capacity and in receipt of monthly wages not exceeding Rs. 300 was passed in 1930. It is reported that more than a lakh of rupees is paid by employers by way of compensation every year in the State. A Maternity Benefits Act has been enacted, and forced labour and criminal penalties for breaches of contract have been abolished.

Measures for the protection of wages including relief from indebtedness were undertaken by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government of Mysore as early as 1911. Under the Mysore Code of Civil Procedure of 1911 one half of the salary of a debtor in excess of Rs. 20 could be attached by a creditor towards the payment of a debt. Moreover, under Section 51 of this Code all persons including workers were liable to arrest and imprisonment in the execution of a decree for the payment of debt. The Government of Mysore amended this Act in 1937 providing exemption from attachment towards debt salary upto and including Rs. 50 and one half of the remainder; also all honest debtors including workers have been protected against detention in jail.

The working of Trade Union legislation in British India is being watched with a view to examining the suitability of enacting such legislation in the State. With a view to promoting labour welfare and to minimise or avert labour disputes, the Government of Mysore have constituted a Labour Welfare Board comprising of the Commissioner of Labour (Chairman) and representatives of employers and employees and the general public interested in labour and this has been functioning usefully in composing labour disputes and ameliorating the conditions of labour. The State Council is, however, examining the Bombay Industrial Disputes Act, 1938, with a view to the enactment of similar legislation in Mysore. The collection and compilation of statistics relating to family budgets of industrial workers in Bangalore with a view to working out a cost of living Index for that City has recently been taken up.

The administration of labour laws is vested in the Director of Industries and Commerce who is also ex-officio Commissioner of Labour. He is also the Chief Inspector of Factories and Boilers and he is assisted by two Divisional Inspectors—one for Mysore and the other for Bangalore. Mr. B. G. A. MUDALIAR, B.A., B.Sc., A.M.I. Mech.E., is the Director of Industries and Commerce in Mysore and the ex-officio Commissioner of Labour.

BARODA.

The total number of registered factories in the Baroda State on the 31st July 1940 was 172 of which 140, employing 37,143 operatives consisting of 31,039 men, 5,789 women and 315 children, were under actual operation. This count was based on the enumeration of concerns employing more than 20 persons. The following British India Acts have been adopted in the Baroda State without any material change with effect from the years shown against each: Workmen's Compensation Act, 1923, with all the Amending Acts and Rules since 1931; Trade Disputes Act, 1929, since 1938; and the Trade Unions Act, 1926, since 1938. The State Factories Act is on the lines of the Indian Factories Act except with regard to the hours of work which are 60 per week but it is of interest to observe that 11 out of 16 cotton textile mills situated in the State are working a 54 hour week. The Bombay Maternity Benefit Act, 1929, was applied from 1936 with a difference in the rate of benefit which in Baroda is at a flat rate of six annas instead of 8 annas in British India. The Payment of Wages Act, 1936, was brought into effect from 11th April 1940 with the difference that wage payments are to be made before the expiry of ten days after the last day of the wage period. The State has had a Mines Act containing provisions in regard to health and safety of workmen employed in mines since 1908.

The Government of Baroda created a post of a Labour Officer in 1938. This officer has been entrusted with the work of bringing about settlements in disputes with the employers and the employed, to study comparative labour laws, to keep in touch with employers and to organise co-operative societies, reading rooms and other institutions for the benefit of labour with the help of employers. The Government has initiated an inquiry into the general financial condition of cotton mills in the State and the conditions of labour employed in them with special reference to recruitment, wages, hours of work, welfare activities, efficiency, etc. Complete information for this inquiry has now been collected and this is in process of tabulation. Four unions of textile workers with a total membership of 5,447 have been registered under the Baroda Trade Unions Act. The policy of the Government towards trade unions is the same as that of the Government of India. The Director of Industries and Labour is in charge of all administration connected with labour. The personnel of the Department is as follows:

Director of Industries and Labour: DR. CHAMPAKLAL A. MEHTA, M.A., LL.B., Ph. D.

Labour Officer: BALVANTRAI S. DESAI, B.Ag.

Inspector of Boilers and Factories: DATTATRAYA B. ARTE, B.Sc., A.M.I.E.E.

INDORE.

Labour Legislation in the Indore State is formulated much along the same lines as that in Baroda but Indore, in addition to all the laws adopted in Baroda, passed the Indore Trade Disputes Conciliation Act in 1938 modelled on the lines of the Bombay Trade Disputes Conciliation Act of 1934 in addition to its adoption of the Indian Trade Disputes Act of 1929. Except for the Factories Act which was passed in 1929 all the other Acts were passed between 1935 and 1939. The total number of factories in Indore State on the 31st March 1941 including flour mills and other minor industrial concerns was 459 employing 25,730 workers of whom 20,573 were men, 4,638 women and 519 were children. The Indore Trade Unions Act and the Rules made thereunder are so designed as to ensure that no disorganised and *ad hoc* unions which almost always harm rather than help the cause of labour should spring up. On the other hand, the bringing into existence of well organised and truly representative bodies which might be of some service to their members is always welcomed by Government. His Highness' Government have appointed a Labour Officer who in pursuance of some provisions contained in an Award given by the Prime Minister in 1940 in a Wages Dispute in cotton textile mills in Indore is entrusted with the work of collection of family budgets and the compilation of a cost of Living Index for Indore textile labour. His work chiefly relates to the maintenance of harmonious relations between the labourers and their employers.

Commissioner of Customs, Commerce and Industries: D. C. SAHNI, M.A.

Labour Officer: S. B. KALE, B.A.

TRAVANCORE.

During the year 1940-41, Travancore State had an industrial population of 55,613 persons in employment distributed as follows: 23,441 persons consisting of 18,522 men, 2,499 women and 2,420 children employed in 182 factories controlled by the Travancore Factories Act; 27,593 persons consisting of 6,413 males and 21,180 females in 42 cashewnut factories; and 4,579 persons consisting of 3,171 men, 30 women and 1,378 boys employed by seven factories which come under the Mines Act. The cashewnut factories, though they employ large numbers of people, do not all of them come under the Factories Act, since they use no power in their operations. There are 289 coir factories of which only 21 are controlled by the Factories Act and the persons employed in these alone are included in the figures given above. The number employed in the other 268 factories has been estimated to be about 16,000. The State has already adopted legislation for the regulation of hours and conditions in factories and in mines, for the payment of workmen's compensation, for the registration of trade unions and for the settlement of industrial disputes. The above are already in force and the necessary staff for administering the Acts has been appointed. A Payment of Wages Act was recently passed by the Travancore Legislature and will shortly become law. All the Acts which are intended to regulate labour and look to their welfare are based on the corresponding measures in British India, with the modifications necessary to make them suitable to the special conditions of Travancore. It is worthy of note that whereas the Baroda and the Indore Factory Acts permit a 60 hour week in perennial factories, the Travancore Factories Act has adopted a 54 hour week as in British India.

As a consequence of the shortage of shipping facilities caused by the outbreak of the War, the coir mats and matting industry which is the most important industry in the State, came almost to a standstill during the year 1940-41. Nearly all the factories were closed down and a very large number of workers was thrown out of work. The Government of Travancore started relief measures immediately and set about exploring markets which would afford permanent relief. The Dewan visited the distressed areas and he was able to secure substantial orders for coir goods to be supplied to the War Department of the Government of India. These measures alleviated the misery of the workers to some extent.

Twenty-eight unions in all have been registered under the Travancore Trade Unions Act. The policy of the Government is to encourage unions of industrial employees provided they work within the limits placed on them by the State Laws and create harmonious co-operation between Capital and Labour. The personnel of the Labour Department is as follows:

Director of Industries and Commissioner of Labour: C. KUMARA DAS, B.A., M.Sc. (L'pool), F.I.C. (London). He is also Commissioner for Workmen's Compensation and Registrar of Trade Unions.

Chief Inspector of Boilers and Factories: P. SITARAMA KUKILLAYA, B.Sc.

Geologist and Inspector of Mines: V. MAHADEVAN.

COCHIN.

Cochin State has a large industrial population but most of its industries are organised on a cottage basis. Of late, however, factories of the regulated type have been growing in importance. On the 16th August 1940 there were 93 regulated factories in the State employing 8,498 persons. The first Factories Act was passed in Cochin in 1907 and ever since then, the State has been following British India in the matter of labour legislation. The legislation so far adopted includes the Factories Act, the Workmen's Compensation Act, the Payment of Wages Act, the Trade Disputes Act, the Dock Labourers Act, the Trade Unions Act, and the Maternity Benefit Act. On the 16th August 1940 there were 8 registered trade unions with a membership of 2,835. The various Acts affecting capital and labour in Cochin were being administered by different departments and there was no officer responsible for the general administration of labour subjects to whom questions affecting the relationship of employers and workmen could be directly referred. Consequently, Government have designated the Director of Industries and Commerce as Labour Commissioner and steps are being taken to put him in charge of all matters affecting labour conditions in the State.

Director of Industries and Commerce and Labour Commissioner: V. K. ACHUTHA MENON, M.A., B.Com.

CIVIL AVIATION.

The development of internal air services in India was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was purely a Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which an airmail service was likely to be used by the public. It was closed down as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances has already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. (now Sir Francis) Shelmerdine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for sometime strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of Civil Aviation in India was only a matter of time.

The reflection of this foresight is mirrored today in the organisation of the trunk air lines of India. The aerodromes and landing grounds on the main air routes are controlled by Indian Aerodrome Officers who are responsible for their safe operation, while the flying personnel on the internal air routes is 90 per cent. Indian. On the engineering side Indians are now taking their places not only as Assistant but as Chief Ground Engineers to internal operating Companies and are already finding their way to responsible positions as Aircraft Inspectors with the Directorate of Civil Aviation.

Development of Indian Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was on 30th December, 1929, extended to New Delhi, mails from and for Europe being carried to and fro each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment pending the development of a permanent scheme. Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government owned services.

The acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy. The machine continued in Their Excellencies' service until 1934, when a new up-to-date aeroplane was purchased for their use and their old one was retained for the use of senior Government officials.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company called The Indian Trans-Continental Airways, Ltd., was formed with a rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways, Ltd., hold 51% of the shares, Indian National Airways, Ltd. 25 per cent. and the Government of India 24 per cent. This Company then operated jointly with Imperial Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways, Ltd. was established largely through the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi, to link with Imperial Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to lack of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. From the beginning of 1935, Imperial Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second trans-India service was extended to Australia in 1936.

Empire Air Mail Scheme.—The initiative in this development was taken by His Majesty's Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on the 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder air mail services in India, *viz.*, Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July, 1938, and all first class mails to Empire participating countries were conveyed by air. The Empire Air Mail scheme was suspended in September, 1939, on the outbreak of the War with Germany, but a restricted service was maintained until June, 1940, when, on Italy's entry into the war, air mails to the United Kingdom were totally suspended. In December 1940, the possibilities of introducing a direct air link between Britain and Durban investigated and a "short circuiting" route was inspected by Major J. R. McCrindle, Deputy Director-General of the British Overseas Airways. The plans are nearly complete and on the introduction of the speed-up scheme, the time would be reduced to twelve days.

Internal air services.—In 1937 Messrs. Tata Sons, Ltd., established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. At present, the service runs twice weekly during the cold weather season (October to May). Besides this Tata Sons have extended their Bombay-Trivandrum service to Trichinopoly where it connects with one of the four main services to Colombo. This service is also operated seasonally during the fine weather months. Surcharged air mails are carried on both services.

The Air Services of India Ltd., Bombay, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

service was terminated in 1940. The twice Weekly Bombay/Poona/Kolhapur Line was also terminated in 1940.

The Indian National Airways run two services, *viz.*, Delhi-Lahore-Karachi and Karachi-Calcutta *via* Lahore and Delhi, the former once a week, the latter twice a week, in each direction.

The K.L.M. are operating once a week between Lydda (Palestine) and Sydney (Australia).

Air Force not operating.

Instruction in Aviation.—It is satisfactory to note the speed with which young Indians have qualified themselves in almost every sphere of commercial aviation, considering the high qualifications, long and expensive training and paucity of facilities for this training in India itself. At one time it was essential for instructors to be trained in England but now it is possible for this training to be obtained in India. It must still be recognised that certain forms of advanced training are not yet available in India although Government has recently arranged a limited amount of training for specially selected pilots on the Government owned Avro X three engined aeroplane. The training of Aerodrome Officers also is now carried out in India at Karachi Air Port under the supervision of the Chief Aerodrome Officer.

Flying training is given in India through Clubs. There are ten flying clubs in all, namely:—The Bengal Flying Club (Dum Dum), Bombay Flying Club (Juhu), Delhi Flying Club (New Delhi), Karachi Aero Club (Karachi Air Port, Drigh Road), Northern India Flying Club (Lahore), United Provinces Flying Club (Cawnpore and Lucknow), Madras Flying Club (St. Thomas' Mount), Jodhpur Flying Club (Jodhpur), Hyderabad State Aero Club (Begumpet, Hyderabad), and Jaipur Flying Club (Sanganer). The first seven of these clubs are subsidised by Government.

The club movement dates from March, 1927, when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India and Burma was formed. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed. The formation of four local flying clubs followed. In December, 1927, the Government of India received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the clubs' income and expenditure until the grants became available. This offer the Government accepted and further decided that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. The grants commenced on 1st April, 1928.

Three more clubs were started later, the Northern India, the U.P. and Madras, and seven clubs are now subsidised.

Subsidy to Flying Clubs.—It has become increasingly evident in recent years that saturation point was being reached in the entry of new pupils able to afford the cost of learning to fly at the prevailing rates. An endeavour has been made to bring about a small measure of improvement in the new scheme of subsidy to the seven clubs in British India, which came into operation on 1st April, 1939, for a period of three years. Bonuses of Rs. 100 and Rs. 50 are paid cheapening the cost of flying to the individual and so tending to promote a revival of interest in private flying as a sport; the scheme is also designed to encourage the clubs to equip themselves with more modern types of training aircraft. The subsidy which is limited to a maximum of Rs. 25,000 per annum (hitherto Rs. 21,000) to each club is divided into two parts as shown below :—

(1) *Fixed Annual Subsidy.*—A fixed payment is made to each club according to the number and types of aeroplanes maintained for the use of members, on the following scale :—

No. of aeroplanes.	Class A (over 120 H.P.) Rs.	Class B (between 75-120 H. P.) Rs.	Class C (below 75 H. P.) Rs.
1	10,000	8,000	6,000
2	12,000	9,500	7,000
3	14,000	11,000	8,000
4 or more	16,000	12,500	9,000

Whereas the previous scheme provided a fixed subsidy for the maintenance of aircraft up to a limit of three, under the new scheme the number is raised to four. Aircraft are reclassified each year. The horse power is a general guide, but such factors as obsolescence of the type of aircraft and general utility for training purposes are also taken into account.

(2) *Bonus for pilots trained* :—Subject to a maximum payment of Rs. 9,000 a year for each club, a bonus of Rs. 300 is paid for each new pilot trained *ab initio* for an 'A' licence on club aircraft and Rs. 100 for each 'A' licence renewed with a minimum of five hours' flying on club aircraft (provided that the pilot does not hold a higher category of licence). From these bonuses, payments of Rs. 100 and Rs. 50 respectively are made to the pilots, as already mentioned, in the case of British subjects and the subjects of Indian States only. Bonuses at the above rates are also paid to the Jodhpur Flying Club.

In the year 1938-39, the last year of the previous subsidy scheme, it was again found that the clubs were unable to earn the maximum grants permissible under the subsidy agreements. As in previous years, this situation was met by granting a bonus on flying hours in addition to the payments made for pilots' 'A' licences issued and renewed.

Purchase of Tiger Moths.—In order to assist the clubs in modernising their equipment and to meet the need for a larger reserve of modern training aircraft in India, the purchase of seven Tiger moths has been sanctioned, one of which will be issued on loan to each of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

seven subsidised clubs. The cost of the seven aeroplanes will amount to Rs. 1,20,000. The Tiger Moth is a type widely used by the Royal Air Force for *ab initio* training and is already in use by a number of the clubs in this country. It has the particular advantage that it is simple to repair and maintain and spare parts are readily obtainable. The aircraft will be complete with blind flying and night flying equipment for advanced training.

The Indian Gliding Association—At Brabourne Stadium, Bombay, which was established in 1931, has plans in hand for fortnightly instructional courses in gliding and soaring. The course is designed for the benefit of those who are willing to devote a holiday to learn to glide or, if already qualified pilots, to add as much as possible to the quality and quantity of their flying.

Aero Club of India and Burma—The Aero Club of India and Burma, besides being the parent club to which the flying clubs are affiliated, is also the representative in India of the Federation Aeronautique Internationale, the Royal Aero Club of Great Britain and the Automobile Association. The Aero Club also serves the private aviator in connection with customs carnets, diplomatic permits, licences for the carriage of arms and camera and maps for flights abroad.

Civil Aviation Scholarships.—(*a*) *Government of India.* Apart from the assistance given to pilots for advanced training on the Avro X, the Government gave the undermentioned scholarships :—

Pilot Instructors.—A scholarship was awarded to an Indian 'B' pilot. He was given an instructor's course with the United Provinces Flying Club and has since found employment.

Transport Pilots.—An Indian 'B' licence pilot with assistance from the Government of India has completed his training in England for employment as a First Officer by Indian Trans-Continental Airways, Ltd.

(*b*) *Provincial Governments.*—The Government of the United Provinces has provided a sum of Rs. 5,000 for the training of 10 'A' licence pilots at half rates, of whom two will be selected to train for the commercial pilot's 'B' licence, also at half rates.

(*c*) *Private Bodies.*—The Trustees of the Parsee Panchayat Funds and Properties of Bombay have awarded financial assistance to two 'A' licence pilots for obtaining 'B' licences.

The Trustees of Sir Ratan Tata Trust of Bombay have awarded assistance amounting to Rs. 5,300 to two students for aeronautical training. One will be enabled to train for A,B,C and D ground engineer's licences in England. The other will receive training for the pilot's 'B' licence in India.

The Trustees of Sir Dorabji Tata Trust of Bombay have also awarded assistance to two students for technical training in England. One student has been given a grant of Rs. 3,000 and the other a grant of £300.

(*d*) *Public Companies.*—Two scholarships have been given by Imperial Airways, Ltd., and one by Sir Homi Mehta, Vice-Chairman of Indian Trans-Continental Airways, Ltd., for a special course of training in England for Indian 'B' licence pilots with a view to their employment as First Officers.

Indian Pilots and Empire Air Mail.—In 1935, Imperial Airways sent an Indian 'B' licence pilot to England for advanced training with a view to his employment as a First Officer. This pilot was given further training by Government in 1938 in the Avro X Aeroplane on his return to India. He was confirmed in his appointment as a First Officer, but subsequently resigned. Pursuing the policy of training selected Indians as First Officers for the Empire air mail routes Government gave assistance in 1935 to another Indian, but he did not complete his course. In 1936 assistance was given by Government to a third Indian who has completed his training. Early in 1939 a selection was made of three Indian 'B' licence pilots for training in England. Two of these are receiving scholarships from Imperial Airways and the third from Sir Homi Mehta, Vice-Chairman of Indian Trans-Continental Airways Ltd. Imperial Airways intend to offer these pilots employment as First Officers on completion of their training.

Advanced Training of Pilots in India.—There is no training school in India for giving advanced training to commercial pilots to enable them to obtain endorsements on the 'B' licences to fly multi-engined aircraft. Since 1937, Government has placed its three engined Avro X at the disposal of selected 'B' licence pilots for this purpose. In 1937, six pilots were afforded some degree of financial assistance for the training. Owing to the success of the scheme two further schemes were sanctioned in 1938. Under the first scheme, two pilots received training on their own expense and two at half the normal flying rate. Under the second scheme, nine commercial pilots were given 5 hours flying instruction each at Government expenses. Out of these, four were again selected for further training to complete 10 hours solo in this aeroplane. This scheme was completed early in 1939.

Wireless Operators.—Three candidates for W-T Operator's licences received training at the Aeronautical Training Centre during 1938.

Eleven licences were issued in 1938, of which four were for operators holding United Kingdom licences. Four are provisional licences to enable the holders to secure the flying experience necessary for the issue of a regular licence. Of these 11 operators, nine are in employment.

Ground Engineers.—48 ground engineers obtained licences in 1938. Ten were trained by the flying clubs, 22 by the Aeronautical Training Centre, six in England and 10 by operating companies. The majority of these men have received training only up to the standard of the 'A' or 'C' categories. 23 of them have only the single 'A' or 'C' category. For the present, since the field for employment of ground engineers with these qualifications is limited, the flying clubs have been advised to restrict new entries of apprentices.

Aeronautical Technical Institute.—The Air Services of India, Limited, run the Aeronautical Technical institute at Jamnagar which has provision for training a limited number of students as ground Engineers according

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to the course prescribed for 'A' and 'C' licences and also for 'B' and 'D' licences issued by the Government of India.

Indian Air Races.—The first Indian Air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December 1934, to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now." The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sassoon to form an Irwin Flying Fund for flying sport prizes. The fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.

The club held in February, 1936, a two-day race from Madras, *via* Bombay to New Delhi. Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and was regarded as having contributed in an important degree to general air-mindedness in India.

All-India Air Rally.—On the 5th and 6th December 1938, an All-India Rally was held at Karachi on the occasion of opening of the newly constructed Air Port Building. His Excellency the Governor of Sind performed the opening ceremony and gave away the prizes to the winners.

All flying clubs in India affiliated to the Aero Club of India and Burma participated. The Viceroy's Cup given for the best aggregate results obtained by one of the competing clubs was won by the Karachi Aero Club. The Sir Victor Sassoon Challenge Trophy given for the best all round progress during the year was awarded to the Karachi Aero Club.

International Flights.—In 1938 there were 21 international flights to, from or across India by non-Indian Aircraft and one flight to India by an Indian Aircraft.

Two Royal Air Force aeroplanes succeeded in flying non-stop from Ismailia (Egypt) to Darwin (Australia), a distance of 7,126 miles, which was flown in just over 48 hours at an average speed of 149 miles per hour. A third machine landed owing to lack of fuel only a few hundred miles short of its destination. These flights were aided by the aeronautical wireless and meteorological services in India.

A non-stop flight in an Arado light aeroplane from Benghazi (Tripoli) to Gaya was made at the beginning of January by the German pilots, Lieutenants Pulkowski and Jennet. The distance covered was approximately 4,000 miles and the feat was claimed to be a record for light aeroplanes. Lieutenant Pulkowski unfortunately met his death in an accident to the aeroplane at Madras.

Two French military aeroplanes crossed India in January, 1939, on their way to Indo-China.

Record flights were made in March, 1938, by Flying Officer A. E. Clouston and Mr. V. Ricketts from England to New Zealand and back, and in April 1938 by Mr. H. F. Broadbent from Australia to England.

Flying by Private Owners.—While no flights by Indian private owners were noteworthy from a record-breaking point of view, three of them deserve mention. A private owner in a two-seater Hornet Moth flew with a passenger from Calcutta to Batavia and back. Inclusive of two days' sight-seeing in Batavia and a day's halt at Singapore, only 14 days were spent on the round journey. The same return trip by boat takes about one month.

The second flight was from Lahore to Srinagar and back. The pilot claimed to be the first private owner to take a single engined aeroplane into Kashmir. In order to get above the clouds over the Pir Panjal Range he found it necessary to fly as high as 19,000 feet.

A third private owner flew his two-seater Miles Hawk on a business trip from North Bihar to Rangoon and back. His flying time to Rangoon was 8½ hours as against 4 days by train and boat. He stated that his actual expenses in fuel worked out to Rs. 130 for the double journey. As he and his passenger shared the expenses it cost them Rs. 65 each as against a fare by train and boat of Rs. 450.

The number of registered privately-owned aircraft on the 31st December, 1938, was 65, as against 64 on the same date in the previous year. All except ten were of British design and manufacture. Twenty were owned by Ruling Princes and Chiefs.

Ground Organisation.—An additional Rs. 10.82 lakhs was made available for Civil Aviation Capital Works by the decision that capital expenditure on wireless works, which had been included originally in the Civil Aviation Works Programme, should be borne by the Posts and Telegraphs Department. The total amount provided for expenditure under this head in India now stands at Rs. 87.93 lakhs (£659,475). The expenditure during 1938-39 amounted to Rs. 19,60,000 (£147,000), making the total expenditure to the end of that year Rs. 69,21,000 (£519,100).

Night Lighting Equipment.—The lighting installations are continuing to give excellent service and to be used with increasing frequency. At Karachi for example, the number of arrivals and departures between sunset and sunrise on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

regular air services increased from 163 in 1937 to 743 in 1938. Revenue from the extra fees charged for night landings at all lighted aerodromes amounted to Rs. 3,581 in 1938 as against Rs. 3,041 in 1937. The value of the free facilities given to air mail contractors in respect of such fees was Rs. 4,653 and Rs. 2,643 respectively. The Electrical and Mechanical staff which is responsible for operation and maintenance is being recruited up to full strength and the entire work of maintaining ground lighting installations is undertaken departmentally. With the exception of temporary breakdowns of new beacons recently installed at Larkhana and Nawabshaw on the Karachi Lahore route, there have been no instances of failure of lighting equipment.

Several improvements have been made to lighting systems. At Dum Dum and Allahabad flood-lights have been resited to conform with other improvements effected to the aerodrome approaches. At Delhi, Allahabad, Cawnpore, Bombay and Hyderabad (Sind) the substitution of red for orange boundary lights on sections of the aerodrome boundary which are unfavourable for take-off and landing has been completed.

Arrangements have been made with the Chief Inspector of Lighthouses for trials to be made at Karachi to determine the effectiveness of the Manora marine light as an air beacon. Karachi Airport is already provided with a location beacon of Neon type which affords guidance to pilots within a range of 25 miles, when they may be flying at a height above the beam of the Manora light.

On the Karachi-Jacobabad route, the ground lighting installations at Jacobabad and Pad Idan have been completed and the airway beacons at Nawabshah and Larkhana are operating regularly. Indian National Airways have found these beacons very useful during the short days of the cold weather season when early departures and late arrivals at Karachi have necessitated a certain amount of night flying. Lighting equipment on the Karachi-Bombay route is in process of installation.

Experiments with wind and landing direction indicators.—Experiments are being continued to determine the most satisfactory form of wind indicator and landing direction indicator for night as well as for day use under the particular conditions experienced in this country.

Aerodrome and route traffic control.—The efficiency of the system of aerodrome and route traffic control has in the past been handicapped by the shortage of aerodrome staff, the lack of training of recently recruited staff and the incomplete state of the communication system.

On the Trans-India route the ground services are now staffed to provide a 24-hour watch when required, whilst the developments which have taken place in wireless and meteorological facilities and the progressive improvement in methods have raised the efficiency of the organisation very considerably. The training school at Karachi is now actively at work and the staff side of the new aerodrome organisation is now in a position to obtain the specialised technical knowledge as well as the practical experience which the duties require.

Trans-India Seaplane Route Organisation.—An inspection of the organisation of the seaplane route from England to Singapore to assist in reaching a decision on all outstanding problems was carried out early in 1939 by Lt.-Commander A. J. Tillard of the Air Ministry. Consultations were held with the Director of Civil Aviation and Lt.-Commander Tillard's report is now being considered by the Air Ministry.

It was decided after consideration of all the data and experience collected in the last two years that there is no suitable alternative to Raj Samand. Arrangements for the permanent organisation of this station are being discussed with the Udaipur Darbar.

The lighting of the Calcutta seaplane port for night operation has been completed. Schemes for night lighting at Allahabad, Gwalior and Raj Samand have been drawn up. Hitherto lighting facilities had been provided only at Karachi seaplane port.

During the cold weather months, December to February, some difficulty was experienced in connection with early departures and late arrivals of flying boats at Calcutta owing to the prevalence of morning and evening fog on the river. Arrangements were therefore made with the Director General of Observatories to station a current weather observer at Bally Reach to give immediate warning of fog formation. This precaution proved effective in keeping pilots informed of the possibility of dangerous conditions developing.

The problem still remains of finding an alternative alighting place so much less subject to influence of fog conditions that it can be relied upon to serve as an emergency base at times when Bally Reach is fog-bound. Further action in this direction will be taken in conjunction with the Air Ministry. At the request of the Air Ministry investigations have been made with regard to the selection of a permanent shore site at Bally Reach.

Wireless Services.—The aeronautical wireless service now comprises eleven stations, namely :—Ahmedabad, Allahabad, Bombay, Calcutta, Chittagong, Delhi, Gaya, Hyderabad (Deccan), Jodhpur, Karachi and Madras. In addition, there are three stations at Gwalior, Raj Samand and Jiwani which at present are operated by Imperial Airways, Ltd., on behalf of the Air Ministry.

The installation of new wireless equipment is still in progress both on the Trans-India route and the South India route and the process of improvement will be carried several steps further by the programme of new works sanctioned. When it is completed it is expected that the full development of the present wireless programme will be reached and a sufficient number of operators will have been trained to provide the full hours of watch demanded. A 24-hour service is now being given at D. F. stations on the Trans-India route, but for the present, except at Karachi, the short and medium wave installations at the aerodromes will not usually be manned for more than 18 hours daily.

On the South India route the aeronautical wireless service between Karachi and Bombay, on the standard aviation wave length of 900

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

metres, is regularly used by Tata's aircraft. To relieve congestion at Karachi it is intended to adopt a wave length of 850 metres for the South India route as soon as a second medium wave transmitter and receiver have been installed there.

South of Bombay a wireless service for aviation is at present operated on the shipping wave length of 600 metres of Madras and Colombo pending the completion of aeronautical stations at these places. Tata's aircraft operating on this section of the route are not at present equipped with wireless and the traffic consists of point-to-point messages.

Experiments are being conducted by Tata's with intermediate frequency radio-telephone apparatus installed in one of their Waco machines with the object of determining the relative advantages of the intermediate and medium wave channels for communication by radio-telephony.

Meteorological Services—Further improvements were effected by the India Meteorological Department in the Meteorological arrangements for aviation. New double-flight pilot ballon observatories were established at Raj Samand and Gwalior to meet the requirements of the flying boat service. The pilot balloon and current weather observatory at Gwadur was transferred to Jiwani; the pilot balloon and current weather observatories at Allahabad and Alipore (Calcutta) were moved to the aerodromes; and a temporary observer was posted at the seaplane base at Calcutta for the issue of special reports, particularly regarding visibility for the benefit of the flying boat service. On the Karachi-Colombo route, the observatories at Bhuj, Malegaon and Hyderabad (Begumpet) began taking regular afternoon pilot balloon observations and arrangements were made for an additional pilot balloon ascent at Ahmedabad in the early morning. The observatory at Bangalore also commenced an additional daily pilot balloon observation in the afternoon.

A new aviation section has been set up at the Upper Air Office, Agra, which will be later transferred with the upper Air Office to Delhi. This aviation section will be responsible for the organisation of the meteorological service on air routes, and, when transferred to Delhi, will maintain liaison with the Civil Aviation Department.

The international codes have been adopted for all current weather reports, including reports of dangerous phenomena and improvement thereof. New editions of the pamphlet on meteorological organisation for airmen and of the Aviation Weather Codes (Pocket Card) were issued.

On the Trans-India air route, the routine arrangements for the issue of forecasts, upper wind and current weather reports by W/T to all main aerodromes and to aircraft in flight were continued. Airmen are able to refer to the latest report on Weather Notice Boards at aerodromes or to get reports by W/T while in the air at routine times and at other times on requisition. On other routes weather reports are prepared by the Meteorological Office to suit the time-table and needs of the air services.

Arrangements have been made for the routine distribution of pilot balloon and current weather reports along the Karachi-Colombo route and the system is working satisfactorily.

Legislation, Rules, etc.—The Indian Aircraft Act, 1934, was further amended by the Indian Aircraft (Amendment) Act, 1938. The latter empowers the Central Government to take measures for the sanitary control of air navigation in emergencies.

The draft of the Public Health (Aircraft) Rules which are based on the International Sanitary Convention for Air Navigation, with modifications to suit conditions in India, has reached a final form and the Rules will be promulgated shortly.

International Commission for Air Navigation.—India was represented at the 26th Session of the International Commission for Air Navigation, held at the Hague during May and June 1938, by Mr. J. A. Shillidy, C.S.I., I.C.S. (retd.).

Aeronautical Maps.—The preparation of a series of aeronautical maps for India on the scale of 1/1,000,000 has been undertaken by the Survey of India. Hitherto, there have been two series of general maps on this scale, namely the "Carte Internationale" series and the "India and Adjacent Countries" series. In order to facilitate the work of keeping the maps up-to-date, it has been decided to concentrate in future on one series only. The "Carte Internationale" has been selected and this will be the basis of the new aeronautical maps. As an essential first step the map sheets are being completely revised and reprinted in turn. As each sheet is completed a special edition will be prepared on which will be surprinted air information conforming so far as possible with the recommendations for the International Local Aeronautical Map of Annexe F of the International Convention.

The Aeronautical information comprises details of aerodromes and landing grounds, wireless and meteorological facilities, obstructions to air navigation such as high factory chimneys and power lines, air and marine lights, prohibited areas, etc.

Accidents.—A total of 24 notifiable accidents occurred in the calendar year 1938, all of which were flying accidents. The corresponding totals for 1936 and 1937 were respectively : 1936, 30 (all flying accidents); 1937,18 (15 flying accidents).

Aircraft Manufacture.—The demand for aircraft caused by the war has led to the exploration of possibilities of aircraft manufacture in India and it is learnt that at least two Indian industrial concerns are interested in the project. Discussions have been going on in that behalf between Mr. Walchand Hirachand, a Bombay industrialist, and the Government of India, and plans for establishing a factory in Bangalore are understood to have reached a very advanced stage. The choice of Bangalore has been prompted by the availability of cheap electricity and high grade steel from the Bhadravathi Iron and Steel Works. The scheme will be financed entirely through a Joint Stock Company. The Government of India, it is understood, have promised to assist the new Company to get the required machinery and have also agreed to purchase, in the first instance, 50 planes a year from them.

Air Routes.

A. *Trans-Continental Air Routes Across India.*—Air services operating from Europe to and across India to the East were as follows:—

(1) Imperial Airways and Indian Trans-Continental Airways Limited.

Until September, 1939, the two companies abovementioned now operate five services each way per week between India and England. Of these, three services were operated by Imperial Airways Limited with 'C' Class Flying Boats between Southampton and Sydney. The other two were operated jointly by Imperial Airways and Indian Trans-Continental Airways Limited between England and Calcutta. The England-Australia air service was suspended in June, 1940, on Italy's entry into the war, but a weekly service was established between South Africa and Australia *via* Egypt. A Government *communique* from Simla, issued on July 11, 1940, announced that arrangements had been made for the transmission of mails by air to the United Kingdom and European countries with which communication was still maintained, by the Sydney-Durban service up to Durban and by sea the rest of the way. The first west bound service to carry mails for the United Kingdom and Europe was expected to leave India by the beginning of the third week of July, 1940.

(2) K.L.M. and Air France.

K.L.M. (Dutch) operated a regular service thrice per week from Amsterdam to Bandoeng, and Air France once weekly from Paris to Hanoi. Both the services operated to a 2½ day schedule from Europe to Karachi and their route across India was from Karachi *via* Jodhpur and Allahabad to Calcutta. K.L.M. are operating a weekly service between Lydda (Palestine) and Sydney (Australia), while the Air France are not now operating.

B. *Indian Air Services*:—There are three companies operating scheduled air lines in India. They are:—

(1) *Tata Air Lines, Bombay*, commenced operating a weekly air mail service between Karachi and Madras in 1932, connecting at Karachi with Imperial Airways' service. The service was duplicated from January 1935.

With the introduction of the Empire Air Mail Scheme the service was extended to Colombo and increased in frequency to four times per week. The frequency was further increased to five times per week from the end of July 1938, but is now again reduced to four. The route is from Karachi *via* Bhuj, Ahmedabad, Bombay, Hyderabad, Madras and Trichinopoly to Colombo. In 1935, Tata Sons established a weekly service to Trivandrum from Bombay *via* Goa and Cannanore connecting at Bombay with one of the Karachi-Madras services. This service has since been extended from Trivandrum to Trichinopoly connecting there with one of the Karachi-Colombo services. From November 1937, the Company began a bi-weekly service from Bombay *via* Indore, Bhopal and Gwalior to Delhi. The Bombay-Trivandrum-Trichinopoly and the Bombay-Delhi services are operated only during the fair season (October to April). Passengers, freight and mails are carried on all these services.

(2) *Indian National Airways Limited, New Delhi.*—This company began operations in December 1934 and now run the following services:—Delhi-Lahore-Karachi, every Tuesday: Karachi-Calcutta, *via* Lahore and Delhi, Sundays and Mondays; Calcutta-Karachi, *via* Delhi and Lahore, Thursdays and Fridays.

They are the principal agents in India for the British Overseas Airways Corporation and Indian Trans-Continental Airways, Ltd., and maintain a fleet of large and small aircraft for charters.

(3) *Air Services of India, Limited, Bombay.*—This company was formed during 1936 and opened a regular service from Bombay to the Kathiawar States in November 1937. The service has now been suspended.

Calcutta-Hongkong Air Service.

On January 18, 1941, The Chinese National Aviation Corporation sent a machine on the first trial trip to India. The Corporation's representatives are now negotiating to establish a regular service between Calcutta and Hongkong. When this service is established, passengers from Calcutta will reach either Hongkong or Chungking in one day.

India-Japan Air Link.

Arrangements are also being made to accelerate the air link between India and Japan. By transporting air mails *via* Bangkok and thence by the Thailand-Japan-Manchukuo Air mail service it is hoped to cover the distance in about a week. The use of this route ensures a thorough air mail link between Indi : and Japan or Manchukuo.

THE SUEZ CANAL.

Opened formally in 1869, the Suez Canal constitutes an artificial waterway about 105 miles long, linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,500 miles respectively, also, of course, substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance.

The Suez Canal is controlled by a company, whose property, valued in the market at £120,000,000, (before the war) passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 44 per cent. of the shares, thanks to Disraeli's celebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares before the war were valued at £84,000,000 and the profits amounted to about £3,500,000 a year. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers, a Dutchman and an Egyptian. Only three of the British directors represent the British Government; the remaining seven represent British shipping and commercial interests. Incidentally, nearly 60 per cent. of the total tonnage passing through the Canal is British. The enterprise is managed in Egypt.

Development.

Since the Great War, the work of widening, deepening and straightening the Canal has been taken in hand with redoubled vigour. Operations are directed from Ismailia. When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. Today, the Canal is on an average, 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 15 ships can pass in the 24 hours. One ship has, however, still to tie up to let a second pass, though there is plenty of room for both. The biggest vessel yet to navigate "The Cut" was of 27,000 tons.

Neutrality.

Absolute neutrality is the law of the Company, guaranteed by an international Convention of 29th October, 1888. The provisions of the Convention are that subject only to exercise of the right of the legitimate self-defence and to action to injure the safety of the canal there can be no restriction, provided that the rules are observed, on the free use of the Canal. On two occasions in the past the Canal has been closed and on a third the question of free use was raised. The first was in 1882, six years before the signature of the Conventions when during the revolt of Arabi Pasha against the Khedive of Egypt, the safety of the Canal was thought to be imperilled. During the Spanish-American war of 1898 the attempt of the Spanish Fleet to call at Suez on its way through the Canal was frustrated by the Canal authorities in accordance with the provisions of Article IV of the Convention. The third occasion on which the Canal was closed was during the Great War when free access and transit was stopped for a short period during which the Egyptian territory and the safety of the Canal were actually endangered by the advance of the Turkish Forces."

Since Italy entered the present war, several bombing attacks have been made on the Canal

No traffic or revenue statistics of the Suez Canal for 1940 are, of course, available, nor can any be had for the duration of the War The latest figures available are those for 1939. (*See Indian Year Book 1940-41.*)

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Nowadays travel in India is easy and is no more expensive than travel in other countries. The Indian railways provide facilities on the trunk lines which eliminate at any rate reduce changes to a minimum and the Indian Hotels have improved very considerably in the last few years.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns; they are but one—the Mahrattas —of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and observation such as the customs, religions philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers, the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the **Taj Mahal.** Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wonderous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferrred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. **Delhi**, the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to e summit, is divided by five corbelled balconies hile on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay *via* Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at **Udaipur** is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavillions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow-capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain does on the hill tops.

For those who have arrived at Delhi *via* Bombay an interesting return trip can be made *via* Benares and Calcutta. Many visitors, however, enter India *via* Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreathe in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archæology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus: but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West

with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India, which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged *via* Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

Travancore, the most beautiful and fertile region in all southern India has many charms to offer the traveller within its domains. It has scenery ranging from a countryside of lakes, creeks and canals, to low hills, undulating land, rice fields and forests of cocoanut and areca palms, with a heavy undergrowth of pepper vines and tapioca. The dominant note in Travancore is one of luxuriance in vegetation. It has a wonderful highland zone with mountains touching heights of from 5,000 feet to over 8,000 feet, and hills covered with the densest of virgin jungle, the home of great herds of wild elephants and bison, tiger, bear, black panther and wild boar, and where lies the lovely Periyar Lake over which one may cruise in comfort and see wild life in its natural habitat.

Trivandrum, the capital, is also accessible by well-kept roads from British India, and is connected by air with Bombay, Madras and Colombo, except during the monsoon.

About seven miles south of Trivandrum is Kovalam, a pleasant seaside resort with good facilities for bathing. Cape Comorin, the Land's End of India, is the southernmost point of Travancore, where the sunrise and sunset are magnificent sights. It is a sacred spot to Hindus and a place of pilgrimage as the reputed abode of Kanyakumari, the virgin Goddess to whom the temple there is dedicated.

North of Trivandrum is the ancient town of Quilon and to the north of this, a pleasant trip by boat along delightful backwaters or by car along a good motor road, is the busy sea-port of Alleppey.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co., Messrs. Jeena & Co., Bombay, etc., and the Publicity Officers of all the more important Railways. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable other places almost as well-known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarpura nearby are well worth a visit.

HOTELS IN INDIA, BURMA AND CEYLON

AGRA.—Cecil, Imperial, Empress, Lawries.

AMRITSAR.—The Amritsar.

AURANGABAD.—State Railway Hotel.

BANGALORE.—The West End, Lavender's, Central.

BENARES.—Clarke's, Cecil, Civil.

BOMBAY.—The Taj Mahal, Green's, Majestic, Ritz, Grand, Pyrkes, Apollo.

CALCUTTA.—Grand, Great Eastern, Spence's, Continental.

CAPE COMORIN.—The Cape Hotel.

CAWNPORE.—Berkeley House, Bellevue Hotel.

COONOOR.—Hill Grove, Hampton.

DARJEELING.—Bellevue, Mount Everest, Alice Villa and Carlton, New Elgin.

DELHI.—Imperial (New Delhi), Maidens, Cecil, Swiss Marina, York, Woodlands.

ERNAKULAM.—Malabar Hotel.

GWALIOR.—Hotel de Gwalior.

HYDERABAD (Dn.), AND SECUNDERABAD.—Perey's, Montgomery's, Viccajee's, John's.

JAIPUR.—Jaipur, New Kaiser-i-Hind.

JODHPUR.—The State Hotel.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the rials of work and prickly heat. These are the principal hill stations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor in about 3 hours or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Bellevue, and the Windmare Hotel

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaula Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmsala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arraumoor; and at Dharmsala the Switzes's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi or Jammu (Tawi)—about 48 hours—whence the remainder of the journey to Srinagar, Capital City of Kashmir, about 200 miles by either route, is accomplished by motor. Maximum temperature of the place is 80° Fahr. and the average height of the Valley is about 6,000 ft., and it is entirely surrounded by the snow-covered lofty, outer-ranges of the Karakoram and the Himalayas. Visitors usually stay at Srinagar, Gulmarg and Pahalgam in boarding-houses, in bungalows rented through agencies or one can hire a houseboat, which can always be available, and live on river Jhelum, Nagin-bagh lake, Nasimbagh, Gagribal, Chinarbagh, Shadipora, Sumbal or Ganderbal. At Gulmarg Nedou's is the only Hotel but boarding-houses are also available besides a sufficiently large number of well furnished wooden huts. People also live in tents as at Pahalgam, Sonamarg and Kukarnag or when on trekking Trout Fishing and shooting.

Kodaikanal. (7,000 ft).—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton, the Golf Link and Lake View are the principal hotels. There are also boarding houses.

Matheran. (2,500 ft).—The nearest hill station to Bombay, ideal for walkers and anybody wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. The best hotels are the S. Lord's Central, Lord Dave Hindu and the Rugby.

Mahableshwar. (4,500 ft.)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and lilies bloom in April and May. Hotels:—Frederick, Hotel de Russe, Race View.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archæological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu. There are excellent golf links and arrangements have been completed to electrify the station.

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil, the Viewforth, and the Brightlands.

Mussoorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Charleville, Hackman's, and the Savoy.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Manor House, Metropole and Royal are the best hotels.

Ootacamund.—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Government of Madras for six months of the year from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam *Via* Madras and thence by hill railway of Ootacamund. The principal hotels are the Savoy, Westward Ho and Cecil.

Pachmarhi. (3,500 ft.)—Situated on a plateau in the Mahadeo Hills of Satpura Range, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G.I.P. railway to Pipariya *Via* Jubbulpore, and a two hours' motor journey. The best hotel is the Pachmarhi Hotel.

Simla.—The summer headquarters of the Government of India (Central Government) and the Government of the Punjab, the Army Headquarters and the Royal Navy, is situated on several small spurs of the lower Himalayas at a mean elevation of 7,100 feet above sea-level. The Governor-General and C.-in-C. are in residence in Simla from May to October every year.

From the beginning of October to about the middle of December, Simla enjoys the best climate in the world and throughout the year it is very equable there being a variation of about 10 degrees between night and day temperatures. The mean rainfall approximates 64 inches. Mean maximum temperature 69 degrees, mean minimum 50 degrees. Kalka, which is 2,100 feet above sea-level, is the terminus for the broad-guage railway system and from thence onwards the metre-guage takes its place, meandering to Simla through over 100 tunnels. For those who prefer a more luxurious mode of travel, rail motors are run by the railway and en route the scenery is superb. At Kalka motor cars are available for those who would prefer to travel by road and the journey is completed within 3½ hours.

There are several excellent hotels in Simla, the Cecil, Corstorphans, Clarkes Grand and for orthodox Indians, Hindu, Muslim and Royal. In Mashobra, 7 miles out of Simla, there are the Gables and Wild Flower Hotels. Boarding houses are in the minority, the best known are Talbot House, Waverley and Glenarm. The Y.W.C.A. and the Y.M.C.A. are open for the greater portion of the year.

There is a very good road into the interior and hikers to Narkunda, Kotgarh and Rampur Bushahr are lodged in rest-houses that line the road. From Simla there are 2 routes to Mussoorie a distance of 145 miles and little difficulty is experienced for accommodation *en route*; permission to occupy Dak bunglows and the Forest Rest House must be obtained from the officials concerned.

It is also possible to fly from Delhi to Ambala entrain, there or motor into Simla. The scenery in these parts is magnificent.

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only two, Kamet (25,447 ft.) and Nanda Devi (25,660 ft.) have been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Lord Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first-class porterage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W.W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas, who got within a few feet of that top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kangchenjau, Pauhunri and Chomiomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingby also attempted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 24,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.), the first peak over 25,000 ft. to be climbed.

Mount Everest.—There have been six Expeditions to Mount Everest of which those in 1921 and 1935 were reconnaissances and those in 1922, 1924, 1933, 1936 and 1938 attempts to reach the summit.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,100 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 26,800 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An **Everest Committee** was formed under the aegis of the Royal Geographical Society and the Alpine Club, and Mr. Hugh Ruttledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in it as members were Mr. F.S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene who climbed with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The 1933 expedition established its base in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col. slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col. by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more was heard of him, until his body was discovered near the site of Camp III, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions; examination of alternative routes from the west, the trying out of new men for the summit attempt; physiological observations; a stereophotogrammetric survey; examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

The 1936 expedition was led by Mr. Hugh Ruttledge and included three of the 1933 climbers Messrs. Shipton, Smythe and Wyn Harris, and one of the 1933 Signals Officers Lieut. Smith Windham. It encountered exceptionally bad weather and unusual conditions. Before the monsoon, snowstorms rendered the mountain unclimbable and the usual pre-monsoon north-west wind was lacking to clear the snow away. However, Camp IV on the North Col. was established to schedule and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap their discomfiture the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to re-open the route to the North Col. but on both occasions the party were in great danger and the attempt had to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west side of the North Col. which, in spite of Mallory's unfavourable verdict, was found to be not only practicable but less dangerous in monsoon conditions than the east side.

The 1938 expedition consisted of seven climbers, H. W. Tilman, E. E. Shipton, F. S. Smythe, N. E. Odell, Dr. C. B. M. Warren, P. Lloyd and Capt. P. R. Oliver and was led by Mr. Tilman. It was considerably smaller than previous expeditions owing to economic reasons and because experience has shown that the small light expedition has as good and perhaps better chance of achieving its object than a large cumbersome expedition rendered comparatively immobile by its transport and tied down to a fixed plan. Though the expedition failed to reach the summit of Mount Everest it fully justified these beliefs and cost only £2,500 as against the £10,000 or more of previous Everest expeditions.

The expedition reached Rongbuk on April 6th and established Camp 3 on April 26th. Wind and cold made further advance impossible

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the party descended to the Kharta valley for a rest and to recuperate from influenza, chills and sore throats. They returned in the middle of May during the commencement of the monsoon which broke on the unprecedented date of May 5th, one month to six weeks earlier than usual. The route up the North Col was forced in dangerous snow conditions and the party had a narrow escape from an avalanche. Camp 4 was established on May 24th but snowstorms drove the party down. It was then decided to regain the North Col from the west *via* the Main Rongbuk Glacier and Camp 4 was re-established after a difficult ice climb on June 5th. On June 8th Camp 6 was established by Shipton and Smythe with seven porters and the following day an attempt was made to reach the summit. Conditions, however, proved impossible owing to deep monsoon snow, and the party was forced to retreat after reaching a height of 27,300 ft. A further attempt by Tilman and Lloyd on June 11th met with no more success and the expedition had to be abandoned.

Aerial Expedition.—An interesting side to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April permitted.

An interesting mountainflight of which details were published in 1933 was one from Risalpur to Gilgit and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken. Such flights are now frequently made by the R.A.F.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat**. It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a route during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten, one or two spent a week without food or shelter.

In May 1937, another attempt was made to climb **Nanga Parbat** by a German expedition, headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of one survivor, Dr. Luft, had perished. Eight of the nine members of the expedition were killed along with nine Sherpa porters. Mountaineering experts are of the opinion that the season was not very propitious for the ascent of the peak, which is considered to be more accessible in the autumn.

A further German attempt to climb Nanga Parbat was made in 1938 under the leadership of Dr. Paul Bauer. During the second half of July the party succeeding in reaching a height of over 23,000 ft. but were forced to retreat by bad weather. During the climb the bodies of Herr Willy Merkl and the porter Gay Lay, who perished in 1934 were discovered.

In 1939 another German expedition led by Herr Peter Aufshnaiter explored the Diamirai flank of Nanga Parbat.

Another expedition to the Karakorams took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party, state it to be more than 1,000 feet higher.

In 1934 Messrs. E. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of **Nanda Devi**, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs. Shipton and Tilman also crossed from Badrinath to Gangotri *via* the Satopanth Pass and explored the head of the Gangotri glacier. Profiting by the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discovery of the route to the Nanda Devi basin an Anglo-American party, the leader of which was Mr. H W. Tilman, successfully scaled Nanda Devi *via* its south-west ridge, Messrs. H. W. Tilman and N. E. Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camps up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

In 1939 the first **Polish expedition** to visit the Himalayas succeeded in making the ascent of the East Peak of Nanda Devi. Unfortunately an accident led to the death of M. M. A. Karpinski and S. Bernadzikiewicz on Trisul above the Milam Glacier.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahigam in Kashmir.

In 1935 an attempt to scale Peak 36,25,400 feet, in the western Karakorams was made by Lieut. J. Waller, Lieut. J. Hunt, Dr. J. S. Carslaw and W. R. Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru was reached by Mr C. R. Cooke who was accompanied to the foot of the final rocks by Mr. G. Schoberth who was forced to give up owing to a high altitude, cough and the risk of frostbite. This ascent was made on November 18th, an unusually late date and is of great interest as proving that high Himalayan peaks can be climbed in early winter at least.

The 1936 French expedition to the Karakorams, like the Everest expedition, encountered very bad weather and accomplished little.

After Nanda Devi the most remarkable ascent of 1936 was that of Siniolchu, a peak once designated as the "embodiment of inaccessibility", in the Kanchenjunga range. This was made by a small German party under the leadership of Herr Paul Bauer. Siniolchu is one of the most beautiful peaks in the Himalayas.

In 1939, a party of Munich mountaineers, consisting of Herren Grob, Paidar and Schmaderer, made the first ascent of the Tent Peak in the Kangchenjunga range and attempted the Twins Peak but were defeated by bad weather.

Other ascents in Sikkim were made by Mr. Marco Pallis's party who attempted Simvu unsuccessfully and by Mr. C. R. Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Fluted Peak.

During the summer of 1937 a number of peaks were climbed, the most notable being Chomolhari 23.997 ft. by Mr. F. Spencer Chapman with one porter, and the Mana Peak 23.860 ft. by Captain P. R. Oliver and Mr. F. S. Smythe, The latter completing the ascent alone as Capt. Oliver was insufficiently acclimatised. Three other peaks of 21.400 ft., 21,500 ft. and 22,481 ft. were also climbed by Messrs. Oliver and Smythe and attempts made on Nilkanta and Dunagiri which were frustrated by bad weather. They also explored a remarkable plateau above the Banke Glacier, discovered in May 1937 by Lieut .R. A. Gardiner of the Survey of India. In addition, Mr. Smythe with three Tibetan porters climbed seven peaks of the Zaskar Range among them the very difficult peak of Nilgiri Parbat, 21,264 ft. During this expedition Mr. Smythe came upon some remarkable tracks in the snow which the Tibetan porters believed were made by a Mirka or Abominable Snow Man. These tracks were afterwards identified as bear tracks by the Natural History authorities in London. It is believed that there is now enough evidence to explain this strange legend of the Himalayas.

Garhwal was visited in 1939 by a Swiss expedition led by M. Andre Roch and two fine peaks were scaled, Dunagiri and the Wedge Peak.

In 1938 Mr. C. S. Houston led an expedition to the Karakoram during the course of which a bold and determined attempt was made to climb K2, 28,150 ft. After failure to obtain a footing on the N. W. ridge, the party, which included several veteran Sherpa porters, ascended the N. E. ridge to a height of 26,000 ft.

A further attempt on K2 was made by an American party in 1939 but ended in disaster, Mr. Dudley Wolfe, and three Sherpa porters losing their lives in stormy weather high up the mountain.

Another expedition to the Karakorams was that undertaken by Capt. J. B. Harrison, Lieut. J. O. M. Roberts, Mr. R. A. Hodgkin, Dr. T. Graham Brown and Lieut. J. Waller together with Dr. G. A. J. Teasdale and Dr. Elizabeth Teasdale. The principal objective was Masherbrum, 25,660 ft. After establishing Camp 7 at 24,600 ft. Harrison and Hodgkin reached a height of about 25,000 ft. before being forced to retreat by bad weather. In descending to Camp 6 they were overtaken by a blizzard and forced to spend a night in the open as the result of which they were seriously frostbitten. The devotion of the Sherpa porters prevented a more serious disaster.

Further exploration of the Badrinath, Kedarnath ranges at the sources of the Ganges as well as various ascents was made by a German expedition under the leadership of Dr. R. Schwarzgruber in the autumn of 1938.

The Survey of India are now very active and much work has been accomplished during the re-survey of Garhwal and Kumaon under the direction of Major Gordon Osmaston, whilst several thousand square miles of country have been mapped by Messrs. Shipton and Tilman during their expeditions to the Shaksgam in 1937 by Mr. Shipton during his expedition to the Kara Koram in 1939.

The Himalayan Club was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the late Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-Gen eral.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfret, Esq., authorising him to "open a new Lodge in Bengal." Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns of Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In 1767 Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1781 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan" Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of **Scotland** P.G.M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836 in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland.

From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

The Grand Lodge of Scotland exercises its rule through a Grand Master of All Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. The Hon'ble Mr. Justice Cecil Patrick Blackwell, Kt., M.B.E. the present incumbent of the office, and controls 70 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

Major A. G. Campbell, G. Supdt., Northern India.

N. Iredale, G. Supdt., Central India.

J. Dundas, G. Supdt., Southern India.

Dr. B. N. C. Roy, G. Supdt., Eastern India.

I. H. Taunton, I.C.S., C.I.E., G. Supdt., Sind.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J.P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Provinces there being two already, *viz.*, English and Scottish the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India who is Rt. Wor. Bro. Mr. Justice Munroe of the Lahore High Court. He has two Asst. Grand Inspectors, one for the Bombay Presidency, who is Wor. Bro. A. Finan, and one for Bengal who is Wor. Bro. E. O. Rees.

Eleven Lodges are working in India at the following places:

Bombay.

Nos. 319, 419, 648.

Calcutta.

Nos. 263, 382, 464, 465, 490 and 567.

Lahore.

No. 19.

Simla.

No. 458.

Royal Arch Masonry.—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The English five Districts are constituted as under:—

Bengal.

31 Chapters. Grand Supdt. Most Ex. Comp. A. Barr-Pollock.

Madras.

20 Chapters. Grand Supdt. Most Excellent Comp. G. T. Boag, C.S.I., C.I.E., I.C.S.

Bombay.

27 Chapters. M.Comp. Ex. W. A. C. Bromham, Grand Superintendent.

Punjab.

22 Chapters. Most Ex. Comp. Rt. Rev. Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., Grand Superintendent.

Burma.

7 Chapters. Most Ex. Comp. W. H. Chance, V.D., Grand Superintendent.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. Sir Shapoorjee B. Billimoria, Kt., M.B.E., J.P., under whom there are 32 Chapters in India. The Grand Secretary of All Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

22 Lodges. Rt. W. Bro. A. Barr-Pollock, District Grand Master.

Bombay.

18 Lodges. Rt. W. Bro. W. A. C. Bromham, P.G.D., District Grand Master.

Madras.

16 Lodges. Rt. Wor. Bro. George Townsend Boag, C.S.I., C.I.E., I.C.S., District Grand Master.

Punjab.

12 Lodges. Rt. W. Bro. Rt. Rev. The Lord Bishop of Lahore, C.I.E., O.B.E., V.D., M.A., D.D., District Grand Master.

Burma.

5 Lodges. Rt. W. Bro. W. H. Chance, V.D., District Grand Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark degree is worked in some S. C. Lodges, but essentially in R. A. Chapters, in which the Excellent, R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. The Mark degree in Scottish Craft Lodges is conferred by the Rt. Wor. Master as the S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Royal Ark Mariner.—The Royal Ark Mariner degree is worked in the English Constitution by lodge attached to Mark lodges. Its ruler is the District Grand Mark Master and only Mark Master Masons can take this degree.

There are 10 R. A. M. Lodges under Bengal. 5 under Bombay, 4 under Madras and 4 under Punjab.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of K.H.S. and Kt. of St. John. They are governed by the Grand Council in England direct.

The Conclaves working in India are:—

No. 43 Bombay and No. 160, Simla.

The Order of the Secret Monitor has 7 conclaves under Bombay and 7 under Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

Guy D. Robinson, P. D. G. W. (Bombay). 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W., Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma, E.C.

E. Meyer, P. G. Deacon, (Eng.), Rangoon.

D. G. S., Madras.

Rao Bahadur S. T. Srinivasa Gopala Charl, P. G. D. Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, P.A.G.D. of C. (Eng.), Freemasons' Hall, Lahore.

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangeer C. Mistree, J.P., 17, Murzban Road, Fort, Bombay.

Office Bearers of the Grand Lodge A. S. F. I. for the year 1940-41.—*Contd.*

E. K. Palia, R.W.M. 1290	Grand Bard.
W. G. Herringshaw, P.M. 1342 and in 1090	Grand Bard.
Lt. T. H. Symonds, R.W.M. 1296	Grand Sword Bearer.
Khursetji J. Kapadia, P.M. 587, R.W.M.506	Asst. Grand Sword Bearer.
Ram Chandra Airun, P.M. 594	Asst. Grand Sword Bearer.
J. Routledge, P.M. 1127	Asst. Grand Sword Bearer.
S. Venkata Ram, P.M. 1148	Asst. Grand Sword Bearer.
P. M. Sundaram P.M. 1163 and in 1031	Asst. Grand Sword Bearer.
T. Cathro, P.M. 1208	Asst. Grand Sword Bearer.
N. D. Adenwalla, P.M.1388 and in 475	Asst. Grand Sword Bearer.
A. W. Ottignon, P.M. 474	Grand Dir. of Music.
S. T. Reader, R.W.M. 735	Asst. Grand Dir. of Music.
B. A. J. Dunlop, R.W.M.756	Asst. Grand Dir. of Music.
Lt H. W. Herbert, P.M. 1031	Asst. Grand Dir. of Music.
Lt. E. H. Gillson, M.B.E., R.W.M. 1090	Asst. Grand Dir. of Music.
E. H. B. Heysham, R.W.M. 1127	Asst. Grand Dir. of Music.
H. L. Prichard, R.W.M. 1256	Asst. Grand Dir. of Music.
K. J. Antia, M.P. 1298	Grand Organist.
C. W. Warrington, J.P., R.W.M. 828	Grand Standard Bearer.
Major J. F. Peart, R.W.M. 526	Asst. Grand Stand. Bearer.
S. H. Madon. P.M. 475	Asst. Grand Stand. Bearer.
U. V. Inamdar, R.W.M. 783	Asst. Grand Stand. Bearer.
P. Subbarao, R. W.M. 957	Asst. Grand Stand. Bearer.
N. A. Daruwala, R.W.M. 1069	Asst. Grand Stand. Bearer.
J. Simon, R.W.M. 1131	Asst. Grand Stand. Bearer.
A. D. Dysart, P.M. 1208	Asst. Grand Stand. Bearer.
S. J. Trombaywalla, P.M. 1363	Grand Marshal.
Major S. R. Bamji, J.P., P.M. 1363	Asst. Grand Marshal.
A. Hague, R.W.M. 338	Asst. Grand Marshal.
Rustomji S. Patel, R.W.M. 389	Asst. Grand Marshal.
P. E. K. Eley, R.W.M. 568	Asst. Grand Marshal.
Haiderali E. Haveliwala, R.W. M. 584	Asst. Grand Marshal.
J. A. Instance, R.W.M. 813	Asst Grand Marshal.
D. W. James, R.W.M. 1068	Asst. Grand Marshal.
W. Bell, R.W.M. 1342	Grand Inner Guard.
E. A. Nadirshah J.P., R.W.M. 1041 and 702	Asst. Grand Inner Guard.
L. R. Standard, R.W.M. 474	Asst. Grand Inner Guard.
N. Coombs, R.W.M. 490	Asst. Grand Inner Guard.
Shantilal P. Shah, R.W.M. 563	Asst. Grand Inner Guard.
Dwijendra Nath Sanyal, R.W.M. 644	Asst. Grand Inner Guard.
Jehanbux M. Sethna, R.W.M. 800	Asst. Grand Inner Guard.
M. M. A Navas, R.W.M. 1148	Asst. Grand Inner Guard.
Rai Bahadur P. C. Mehra, R.W.M. 1281	President of G. Stewards.
Sitaram Banerjee, R.W.M. 371	President of G. Stewards.
Dr. Bankat Chandra, R.W.M. 569	President of G. Stewards.
F. Ashton, R.W.M. 634	President of G. Stewards.
Moinuddin A. Khan, R.W.M. 1163	President of G. Stewards.
D. Reid, R.W.M. 1208	President of G. Stewards.
W. R. Tennant, R.W.M. 1324	President of G. Stewards.
Major A. White, R.W.M. 1364	Vice-Presdt. of G. Stewds.
J. W. Murdoch, R.W.M. 337	Vice-Presdt. of G. Stewds.
Comal S. Rangaswami, R.W.M. 404	Vice-Presdt. of G. Stewds.
J. P.deVos, R.W.M. 611	Vice-Presdt. of G. Stewds.
Dr. Mohamed I. Shaikh, R.W.M. 1064	Vice-Presdt. of G. Stewds.
Rustomji N. Bharucha, R.W.M. 1297	Vice-Presdt. of G. Stewds.
Dr. Syed Zarif Husain, R.W.M. 1384	Vice-Presdt. of G. Stewds.
J. N. Balsara, R.W.M. 1388 and in 800	Grand Tyler.
W. H. Perkins, P.M. 702	

GRAND STEWARDS.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 126 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

The Survey is unique in that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India."

Botanical Survey.—The Botanical Survey department of the Government of India was under the control of a Director. The Superintendent of the Royal Botanic Garden, Calcutta was *ex-officio* Director. The Director having retired since December 3, 1939, the Department is awaiting some reorganisation. The duties of the Director are distributed amongst (*i*) Dr. K. P. Biswas, M.A., D.Sc. (Edin.), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta; (*ii*) Mr. S. C. Sen, B.Sc. (Cal.), B.A. (Cantab.), A.M.I. Chem. E., Offg. Superintendent, Cinchona Cultivation in Bengal and Principal Quinine Officer of the Government of India; and (*iii*) Mr. S. N. Bal, M.Sc., Ph. C., Curator, Industrial Section, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a Curator who is engaged in the development and maintenance of the Industrial Section. The Director held administrative charge of the Government of India's cinchona distribution in India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the vegetable resources of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, limnology, distribution of plants, ecology and economic botany of plant life—the work accomplished in pure and applied botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open, prove to be most useful in dealing with such questions of considerable State-importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaption of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the *relative* accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for thirty-one ports between Suez and Singapore.

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905, however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at that time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing, however, to the Great War, and more recent retrenchments, only about three-fourths of the programme had been completed by 1940, in spite of the reduction of scale for the less important areas.

Although new surveys are carried out every year, covering from thirty to sixty thousand square miles—an area roughly that of England—the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but are entered from data gathered from outside sources.

Out of a total of 1,623,015 square miles, which is the Survey programme of India 1,199,340 square miles have now been surveyed, and it is hoped that the remaining area will be done in about 12 years' time.

While some of these unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in Central Burma, Eastern Bengal, North Bihar, South Bombay, Gujrat, Sind and Western Rajputana have yet to be mapped on modern lines.

The work is now being done by 8 parties distributed all over India, although their operations have been restricted since the outbreak of war.

On the separation of Burma from India on, 1st April 1937, the Burma Survey Party of Survey of India, has been placed on foreign service conditions under the Government of Burma. Technical and administrative control is, however, still exercised by the Surveyor General of India. The activities of the Survey of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys;

Riverain, irrigation, railway and city surveys;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun are always at the disposal of other Government departments, and the public, for such work as the printing of special maps, illustration for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining up-to-date instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be replaced from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible assistance, and continuous research is being carried on in the latest methods of mapping from photographs taken from the ground and in the air.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is in the hands of the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Delhi under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also, administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Dehra Dun; Officer in charge No. 6 (South India) Party, Bangalore; and Officer-in-Charge Burma Survey party, Survey of India, Maymyo.

Indian Science Congress:—The Indian science Congress was founded in 1914 largely through the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The general administrative work of the Office of the Congress was under the management of the Royal Asiatic Society of Bengal till 1939. The Association at present has a permanent staff of its own and an office to administer its own affairs. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually.

The Congress meets in January each year in one of the principal cities. The proceedings last for six days. The Head of the Local Government usually becomes Patron of the Congress and the session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being usually represented in turn. The sections are (1) Mathematics and Statistics, (2) Physics, (3) Chemistry, (4) Geology, (5) Geography and Geodesy, (6) Botany, (7) Zoology, (8) Entomology, (9) Anthropology, (10) Medical and Veterinary Research, (11) Agriculture, (12) Physiology, (13) Psychology and Educational Science, (14) Engineering; when the Sections meet separately, each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers. Special discussions and symposia are held in the mornings or in the afternoons during the Session. Social functions and visits to places of scientific and industrial interest are arranged in the afternoons by the Local Reception Committee which is formed at the venue of the Congress to arrange for the work of the Session. Popular Lectures by eminent scientists and specialists are delivered in the evenings for the general public and form an important and attractive feature of the programme.

General Secretaries.—Prof. S. K. Mitra, M.B.E., D.Sc., F.N.I., University College of Science, 92, Upper Circular Road, Calcutta; P. Parija, M.A., F.N.I., I.E.S., Principal, Ravenshaw College, Cuttack.

The Indian Research Fund Association.—This Association was constituted in 1911 with a sum of Rs. 5,00,000 set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association can claim to be amongst the pioneers in organised medical research on a large scale and its work has been widely appreciated in other countries.

The control and management of the Association are vested in a Governing Body, the President of which is the Member-in-charge of the Department of Education, Health and Lands of the Government of India. This body is assisted by a Scientific Advisory Board of which not less than three members have seats on the Governing Body. The Director-General, Indian Medical Service, is the Chairman of the Board and the Public Health Commissioner with the Government of India is the Honorary Secretary of the Board and of the Governing Body. Membership of the Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent life member, while every subscriber of Rs. 100 per annum can be a temporary member.

The original Governing Body of the Association was, until 1929, composed exclusively of officials, but in that year the Raja of Parlakimedi made a donation of Rs. 1,00,000 to the Association and was appointed a life member. In the same year the Government of India, after taking into consideration the question of liberalising the constitution of the Governing Body, decided to enlarge that Body by including three representatives of the Indian Legislature, two representatives of Medical Faculties of Universities incorporated by law in India and one eminent non-medical scientist to be nominated by the Governor-General. As a result of further representations from the Universities and the Legislature, this Body was again enlarged in 1933 by the addition of a third representative of the Medical Faculties of Indian Universities, whilst it was decided that the non-medical scientist should in future be elected by the Indian Science Congress Association.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A Recruitment and Appointments Board has been formed from amongst the members of the Governing Body of the Association to select and recommend officers for appointment in the Medical Research Department and the All-India Institute of Hygiene and Public Health, Calcutta.

In order to ensure the closest co-operation between workers and to prevent overlapping of efforts, an annual conference of medical research workers and administrative heads of Medical and Public Health Departments used to be convened under the auspices of the Association upto 1938. In that year it was decided that the Conference should be held biennially in future. No Conference will, however, be held in 1940, nor is one to be held in 1941 on account of the war. At this conference free discussions are held on the work accomplished and on proposals for future work. The results of the discussions enabled the members of the Scientific Advisory Board to make their recommendations for the programme for the following year. The Board is assisted by Advisory Committees consisting of Research workers on cholera, malaria, maternal mortality, nutrition, plague, leprosy and tuberculosis, who examine the proposals for research work and make recommendations to the Scientific Advisory Board.

The results of researches carried out under the auspices of the Association are published in the "Indian Journal of Medical Research" and its "Memoirs" and the "Journal of the Malaria Institute of India," all of which are issued under the authority of the Association and have now a firmly established position in the scientific world. These publications are obtainable from Messrs. Thacker Spink & Co., 3, Esplanade East, Calcutta, on payment.

Since the inception of the Association a great number of enquiries have been carried out and from small beginnings great expansion of its activities has taken place. Enquiries which have been, or are, in progress include investigations on cholera, bacteriophage, malaria, nutrition, leprosy, plague, vaccines, tuberculosis, pharmacology, indigenous drugs, maternal mortality, helminthology, medical mycology, dracontiasis and filariasis, protozoal parasites, cancer, epidemic dropsy, kala-azar, blood culture and dried blood plasma, sandfly fever, typhus, bacillary dysentery, snake venoms, fluorosis.

Besides financing investigations which are conducted by workers in its direct employment, the Association gives grants-in-aid to institutions and also to outside workers. The expenditure for the last few years has amounted to between seven and eight lakhs of rupees per annum. The Association has been supporting the Malaria Institute of India, which now enjoys international recognition. As a part of the activities of this organisation and in commemoration of Sir Ronald Ross's intimate association with India, an experimental malaria station was opened in Karnal in January, 1927, and named the "Ross Field Experimental Station for Malaria." This was transferred to Delhi on 1st March, 1939. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria problem. The Public Health Section of the Institute has been taken over by Government since April, 1940.

The Association maintains the Nutrition Laboratories at Coonoor. The laboratories carry out investigations which have a direct bearing on the problem of nutrition in India. The diet surveys undertaken by the laboratories have provided very valuable information as to food requirements. The publication of Health Bulletin No. 23 'The Nutritive value of Indian Foods and planning of satisfactory diets' has made available to the public useful knowledge about Indian foodstuffs. Besides carrying out experiments in nutrition, annual classes are held at which candidates from all over India are trained in the problems of nutrition. The Coonoor laboratories undertake the task of collaboration in the nutrition work of the League of Nations and act as a liaison laboratory for the Far Eastern countries. The nutrition advisory committee of the Association has been recognised by the Government of India as the National Advisory nutrition committee for India.

Research work at the Nutrition Research Laboratories, Coonoor, brought to light the high value of dried amla powder as an anti-scorbutic. As a result of this and at the request of the Medical Store Depot, the Association's laboratories at Coonoor have undertaken the manufacture if large quantities of amla powder for army purposes.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys of the world. It was initiated in 1945 with a view to making a geological examination of the coal formations of India in order to provide accurate information on the mode of occurrence of the coal seams and thus enable mining operations for the extraction of coal to be conducted with knowledge and confidence. By 1857, the activities of the Geological Survey of India included a systematic geological survey of the whole of India as well as special investigations in connection with mineral deposits. The gazetted cadre of the Department at present consists of a Director, 4 Superintending Geologists, 15 Geologists, 1 Chemist, 1 Assistant Chemist and 15 Assistant Geologists.

The primary function of the Geological Survey of India is to investigate and estimate the mineral resources of the country. The fundamental work underlying such investigations is a thorough comprehension of the geological structure of the country and for this purpose a systematic field geological survey is undertaken and geological maps are prepared. From the data thus obtained, it is possible almost automatically to locate the possible sources of mineral wealth. A considerable portion of the mineral wealth of India has been discovered direct by the Department while of the remainder (excluding Mysore which maintains its own Geological Department) the discoveries have been in a large measure rendered possible by the work of the Department.

The regular field work of the Department is supplemented by work at headquarters involving the study of specimens, completion of field maps and the writing of reports. The results of minerological and petrographical study often require confirmation by chemical investigation.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

For this purpose a chemical laboratory has been provided in which specimens of minerals, ores and rocks sent in by the public for determination are also examined. As a rule it is not possible to make quantitative determinations, but specimens are identified in return for the name of the precise locality from which they have been obtained and this information is kept confidential if so desired. After study, the specimens collected in the field are stored in the Indian Museum for future reference, to which the public (including students) have access. In all branches of Geological work, it is necessary to compare new results with those previously obtained both in India and abroad and for the purpose a Library is maintained in the Department. This Library is open to those who wish to consult geological and mining publications.

The results of the investigations and researches of the Department are published in three series of publications. These are—(*a*) Memoirs which are devoted to the more complete surveys, dealing either with a particular region or with a particular mineral; (*b*) Records which consist of shorter papers on stratigraphical, mineralogical, petrological or palæontological subjects, including Bulletins on minerals of economic importance; (*c*) Palæontologia Indica containing the result of palæontological work with numerous illustrative plates.

The advice of the Geological Survey of India is obtained by the Central Government on all questions of mineral policy.

The functions of the Geological Survey of India are not confined to the investigation and estimation of mineral resources. The Department is prepared to advise and is frequently consulted on problems of water-supply, sites for storage dams and reservoirs, location of tunnels and bridge foundations, stability of hillsides, suitability of stone for building and road metal and other engineering aspects of geology. The Department has also been paying considerable attention in recent years to questions of earthquake danger, flood control and drainage on the one hand and the smelting of iron-ore, cement manufacture and the generation of electricity from coal on the other hand. It also undertakes to present collections of minerals, rocks and fossils to schools and colleges and to give lectures to students and at times to the public with a view to popularising the study of geology.

The chief aim of the Geological Survey is the development of the mineral resources of India. As mineral development is a Provincial subject under the new constitution, the work of the survey is done largely for the benefit of the Provinces. Every year before the programme of the field surveys is made, each Provincial Government is asked whether any geological investigations, mineral survey or engineering enquiry is desired in the Province during the regular field season. When any such work has to be done, it is included in the programme of work and is carried out as a normal work of the Department without any charge. But if any special problem has to be dealt with which does not come under the regular operations of the Department, *e.g.*, a mineral survey of a particular area or an enquiry connected with a great engineering project, a charge is made for the services of the officer deputed for such work.

Director.—Dr. Cyril S. Fox, D.Sc., M.I. Min.E., F.G.S.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16⅔ years, purchase on the nett Municipal assessment, in the absence of a report from a competent architect.

Scale of probate duty:—

Up to Rs. 1,000—Nil.

For the next Rs. 9,000 (*i.e.* up to Rs. 10,000), 2%; for the next Rs. 40,000 (*i.e.* up to Rs. 50,000) 3%; for the next Rs. 50,000 (*i.e.* up to Rs. 1,00,000) 4%; for the next Rs. 1,00,000 (*i.e.* up to Rs. 2,00,000) 4½%; for the next Rs. 50,000 (*i.e.* upto Rs. 2,50,000) 5%; for the next Rs. 50,000 (*i.e.* upto Rs. 3,00,000) 5½%; for the next Rs. 1,00,000 (*i.e.* up to Rs. 4,00,000) 6%; for the next Rs. 1,00,000 (*i.e.* up to Rs. 5,00,000) 6½%; for amounts exceeding Rs. 5,00,000 (or the portion over Rs. 5,00,000) 7%.

In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties, have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed probate is ordered to be granted.

Earthquakes.

Physical divisions of India and their relation to Earthquakes.—The Indian continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute India's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophies, as we know from our recent experience of the Bihar earthquake (January 1934).

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in India, being comparatively free from severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this. These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by Mr. W. D. West of the Geological Survey of India.

Causes.—It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes. In the case of thrust planes certain sets of rocks override others, instead of being merely dislocated. The epicentre, that is the place of maximum intensity, frequently coincides with these faults or thrust planes, which proves that a close relationship exists between earthquakes and the dislocations. A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyaukkyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes. It may, however, be pointed out that it is only such 'faults' as are still active that give rise to earthquakes. Thus the faults in the Peninsular area appear to be inert and therefore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. There is, however, no consensus of opinion on this point for in Norway, where the steep mountain ranges are subject to rapid denudation, there are no earthquakes. The cause may be more deep-seated as, for example differential cooling and contraction of the earth's interior. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec. 1927). The regions where mountain ranges, take sharp bends, being highly folded, are naturally areas of pent up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Suleiman, Bugti or Kirthar ranges.

Frequently more than one cause contributes to these earthquakes and the results are then even more disastrous.

Factors Controlling Damage and Loss of Life.—The intensity of the earthquake is not the only factor upon which the extent of damage and loss of life depends. Much depends upon the time of shock, the nature of the buildings, the habits of the people, etc. Thus the amount of damage done is often greater in India, where *pucca* houses are more common, than in Burma, where houses are mostly wooden, though the latter may suffer more from fire, as happened in the case of the Pegu earthquake (5th May, 1930).

The time at which the earthquake occurs makes a considerable difference to loss of life, for an earthquake occurring at night takes people unawares. (Kangra, 20,000 lives lost; Quetta, toll of life 25,000). Had the Bihar earthquake, in which 10,000 lives were lost, occurred at night the toll of life would have been unthinkable. Dr. A. M. Heron, Director, Geological Survey, makes certain observations in the case of the Baluchistan earthquake of 1909. He remarks that certain communities suffered more heavily than others because more of their number slept indoors and, being better off, lived in two storied houses, which naturally suffered more damage. The fact to be emphasised is that the loss of life, etc., does not entirely depend upon the severity of the shock, but upon the time of occurrence and various other factors.

Sources of Information.—Very little is known of the Indian earthquakes previous to the year 892 A.D. and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A.D. occur are the *Tárikhul Khulafá* (History of the Caliphs), the *Alkámil-fi-l Tárikh* by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ibnulathír—a historical work of the Arabians, the *Mir-át-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Badáoní* (Bibliotheca Indica), Bábar's memoirs, Khátí Khán's *Muntakhab ullabáb*, etc. Much information is gleaned from the Journals of the *Royal Asiatic Society of Bengal*, the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn.

Historical Review.—The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 893 A.D. or early in 894 A.D., when Daibul or Daipul, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Tárikhul Khulafá* (History of the Caliphs) and in *Alkámil-fi-l Tárikh*. According to him both these works mention the month of Shawwál (Hijra 280) as the date of occurrence. Since the month of Shawwal commenced 90 days before the 13th of March 894 A.D. that is the 14th December 893, the date of this earthquake is fixed by Oldham about the close of A.D. 893 or early 894 A.D.

6th July 1505.—This earthquake affected Afghanistan and Northern India. It is recorded that great fissures appeared in many parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month. Oldham mentions that this earthquake is recorded in the *Mir-át-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, in *Badáoní* (Bibliotheca Indica Vol. I, p. 319) in the Memoirs of Bábar (Erskines edition, p. 170) in *Firishtah* (Lucknow edition, p. 183) and its date is therefore authentically recorded.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhugar in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1668.

The next earthquake of great intensity which affected India occurred in 1668, between the dates 2nd—11th May. Its effect was so serious that Samáji or Samáwáni—a town of 30,000 inhabitants sank into the ground. A record of this appears in the *Ma'asir-i' A'lamgiri* (Edit. Bibl. Indica, p. 74).

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the '14 Muharam of Aurangzib's 12th year' (Mir-át-ul-'Alam, an unpublished work of Bakhtiwar Khan) that is, the 4th of June 1669. This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow!

Kashmir and Attock were affected by shocks on 22nd June 1669 and 23rd June 1669 respectively, but not much damage appears to have been done.

A severe earthquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river!

Bengal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of India—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

16th June 1819.—This was one of the worst earthquakes experienced in India. Its effect was the severest in Cutch, the chief town of which—Bhuj—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on 29th October 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

1827 *Sept.* (*before* 26*th Sept.* 1827).—The fort of Kolitaran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

6th June 1828.—There is record of at least eighty earthquakes affecting the Indian region between the aforementioned date and the year 1839, but of these only two are worth mention, namely, the one that shook the vale of Kashmir on 6th June 1828 and the other that affected Nepal and the eastern and central region, Northern India. In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day!

26th August 1833.—Felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

An earthquake of great intensity affected Burma, more particularly Amarapura and Ava, on 23rd March 1839. It is reported that shocks continued for four or five days, every fifteen to thirty minutes. 200—400 lives were lost and pagodas and other buildings in Ava, Amarapura and Sagaing suffered heavily.

19th February 1842.—Lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Numerous later earthquakes which occurred in different parts of the Indian region do not call for much attention as they were of minor importance. Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity, Sholapur, Maktal, Singrurgarh, Bellary, Kurnool. Belgaum were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Severe shocks, local in their effect, occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

24th August 1858.—Burma was affected, but the shocks were not of great intensity. False Island situated south-east of Cheduba Island (18° 38′ N: 93 55½′ E) disappeared entirely under the Ocean. The same earthquake affected the Punjab and Bengal, but very little damage was done.

10th January 1869.—Experienced in Assam (Cachar), total area where shocks were felt was 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of 31st December 1881. The radius of the area affected was about 800 miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Akra, Ootacamund and Calicut in India, and in Burma at Akyab where it was followed by the eruption of a mud volcano in Ramri. The northernmost point affected was near Monghyr.

30th May 1885.—This earthquake, although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300—450 miles, the total area affected being about 110,000 square miles.

14th July 1885.—The epicentre of this earthquake was north-west of Dacca. It was felt violently throughout Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

20th December 1892.—This was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet! The earthquake was, however, local in its effects.

The worst earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,625,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

21st October 1909.—This earthquake affected the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15—45 miles. The elongated epicentre was N.W.—S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A violent earthquake occurred over the greater part of the Northern and Southern Shan States on 21st May 1912, and was felt practically over the whole of Burma, Siam and Yunnan. An area of 125,000 square miles was affected. Shocks continued the following day and were followed on the 23rd May by a severe shock which was felt over an area of 375,000 square miles. Numerous after shocks continued in May, June, July and August, when they finally ceased. The epicentre was close to the great Kyaukkyan fault in the Northern Shan States.

No severe earthquake is recorded during the six years following the last earthquake in Burma, but a violent shock was felt on 8th July 1918 and affected Eastern Bengal, Assam, Burma, North-west India as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault. It was accompanied by pouring out of sand, mud and water from fissures created in the ground.

17*th December* 1927.—Was experienced in Rangoon, but very little damage was done. Affecting as it did a big commercial city like Rangoon its importance cannot be denied. Investigation appears to show that the shock was due to " forces of uplift causing movement along lines of weakness below the deltaic alluvium." Although the area is covered with alluvium and direct observations are not possible, the probability of such a zone of weakness existing in the neighbourhood of the town must be accepted.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1929 in the North-West Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 *klms.* Which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

8*th August* 1929.—This earthquake, which affected the small town of Swa in Burma, was connected with several of the later earthquakes that occurred in different parts of Burma—the Pegu earthquake of 5th May 1930, the Podo earthquakes of July to December 1930 and the Pyu disaster of 4th December 1930. The epicentral area was quite small and lay about 6 miles to the north-west of Swa. Damage was done to railway lines and bridges. Loaded trucks were lifted off the track and thrown to one side. The shocks were due to movement along a fault in the Tertiary rocks, more or less parallel to the great fault which is known as the Boundary Fault.

A violent shock occurred at about 8-15 P.M. on 5th May 1930, and practically levelled the whole town of Pegu. About 550 lives were lost and considerable damage was done to property in Rangoon as well. The actual area affected was about 220,000 square miles. This earthquake came without any preliminary warning and lasted only 30 seconds. The earlier Burmese earthquake previously mentioned was presumably a forerunner of the present one and did not indicate the dying out of still earlier movements. It is thought that the movement was connected with the boundary faults of the Shan Plateau, which was accentuated by the forward movement of *terra firma* into the gulf of Martaban.

Assam was shaken by a severe earthquake on 3rd July 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

3*rd/4th December* 1930.—Several severe shocks were felt between 10-15 P.M. and 1-22 A.M. in Pyu, Burma. Most of the brick buildings were destroyed and about 30 persons lost their lives. The shocks were felt over an area of approximately 220,000 square miles.

27*th August* 1931.—This was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Suleiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

15*th January* 1934.—This, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected India. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitarmarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Motihari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 P.M.), for had it occurred at night it would have been one of the worst of such disasters experienced upon the earth.

31*st May* 1935.—The Quetta earthquake is one of the latest of the more violent catastrophies that have overtaken the Indian region. This can be estimated from the fact that 25,000 lives perished and damage to private property, Railway lines, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causes leading to these earthquakes are unknown, but the focus was probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

Digitized by Arya Samaj Foundation Chennai and eGangotri

The frequency of aftershocks of the Quetta earthquake of May 1935, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18.45 hours and of 21st March at 21.45 hours, Indian standard time.

The last severe earthquake to be experienced in India occurred in the Hindu Kush on 14th November 1937, and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over the Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peshawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of India later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below.

5th January 1938.—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on the 7th January, but there was no damage or loss of life.

14th April 1938.—An earthquake shock was felt at Monywa in the Lower Chindwin district, Burma, at 7–47 a.m. Cracks appeared in the walls of several buildings, but there was no loss of life.

3rd May 1938.—Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

16th August 1938.—Shocks were experienced in the Upper Chindwin district, Burma, and were felt over a fairly wide area. The shocks, which lasted about 30 seconds, seem to have been severe at Kalemyo. *Pucca* buildings and Pagodas tumbled down, but there was no loss of life. Smaller shocks were also felt at Mawlaik, Paungbyin, Mingin, Indaw, Kalewa, Homalin, Tabyin, etc.

7th February 1939.—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

Reports received by the Geological Survey of India from various parts of India and Burma show that 82 earthquake shocks were felt in 1937 in India. With the exception of the rather severe shock of 14th November, which originated in the Hindu Kush region and affected a considerable tract of north-west India, the rest were of slight intensity, unattended by any damage to buildings or persons.

Regionally the shocks were distributed as follows:—

Burma, 28; north-eastern India, including Sikkim, Nepal and Tibet, 31; north-western India, including Kashmir, Chitral and Baluchistan, 21; and Peninsular India, 2.

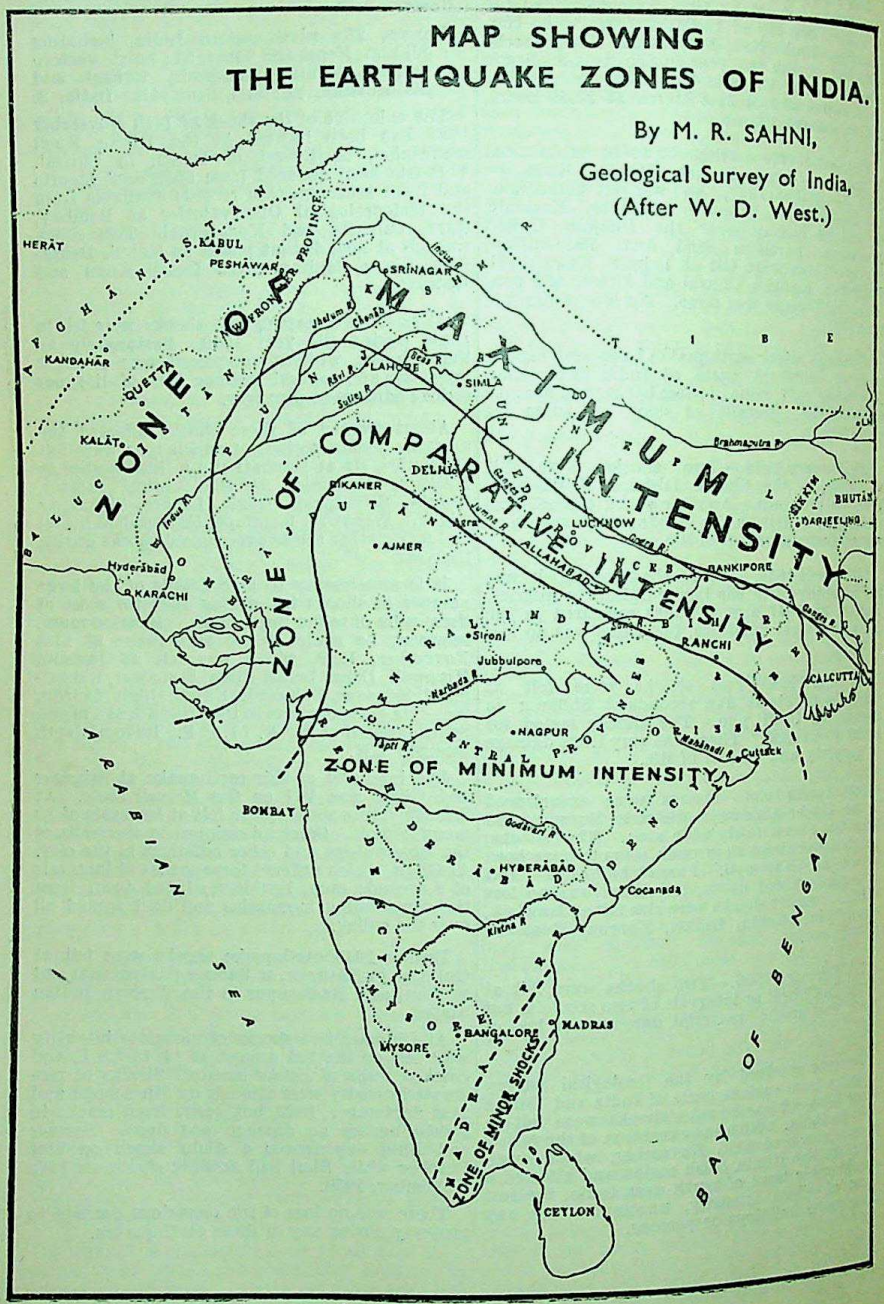
The epicentre of the shock of 14th November 1937 has been located in the Hindu Kush mountains, north-west of Drosh, in Chitral. This has been deduced from observers' reports and from seismographic records available from the Meteorological Observatories at Bombay, Agra, Calcutta and Kodaikanal. This shock was felt at such distant places as Kabul, Dehra-Dun, Simla, Multan, Dera Ismail Khan and Roorkee.

At least sixty earthquake shocks were felt in India during the year 1939. Fortunately all these shocks, without exception, were of slight intensity and caused neither loss of life nor serious damage to property.

About twenty of these shocks affected the unstable Assam region, of which four were felt at Dhubri, six at Gauhati and a like number at Shillong. Kashmir, Drosh (Chitral State), Quetta, Rawalpindi, Gilgit, Lahore, Shikarpur (Cutch), Peshawar, Begumpet (Hyderabad State) and many other towns experienced shocks during the year.

It is unnecessary to give details of the large number of shocks felt during 1939 for most of these were of minor importance. Mention must, however, be made of the earthquake of 21st November, 1939, which was felt at Jammu, Mianwali, Dehra Ismail Khan, Peshawar, Ralwalpindi, Srinagar, Dalhousie, Kabul, Gilgit, Skardu, etc. Its epicentre was in the Hindu Kush range, being situated at 36° N. 75.5° E. Its focal depth was 200 KM.

The intensity of this earthquake at Srinagar and Gilgit was VII on the Mercali scale. At Srinagar three shocks were felt at intervals of 10 seconds each. Cracks developed in the walls of the Observatory and other buildings in the city. At Gilgit, which suffered three shocks at intervals of 2 seconds each, boulders slipped down from the surrounding mountains and dust spread all over the valley.



During 1940 earthquake shocks were felt at Gulmarg in Kashmir, at Barmer (Rajputana) and at Bhuj and Radhanpur in the Western Indian States.

At Gulmarg two shocks of moderate intensity were felt on the 3rd August at 14.45 I.S.T. and cracked walls of *kutcha* houses. Shocks of moderate intensity were also felt on 8th August and 21st September, 1940, but apart from cracks in *kutcha* houses no damage was done. Barmer and Bhuj experienced a slight shock on 31st October while Bhuj had another shock on 13th November, 1930.

There was no loss of life or serious damage to property during any of these earthquakes.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Communications of the Government of India. For the efficient working of the Department there is a Financial Adviser, Communications. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services) and eight Assist. Deputy Directors-General.

For postal purposes, the Indian Empire is divided into eight circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first seven is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies. With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration, and it started its career under a separate administration under the new Government of Burma.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Sind and Baluchistan Circle, the Director is assisted by two Assistant Directors. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Aden, Nepal, Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
Letters.	Anna. Pies.		
Not exceeding one tola	1 3	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
And every additional tola	0 6		
Book and pattern packets.			
For the first five or fraction thereof	0 0		
For every additional two and a half tolas, or fraction thereof, in excess of five tolas	0 3

Postcards.

Single	9 pies.
Reply	1 anna 6 pies

(The postage on cards of private manufacture must be prepaid in full. Reply postcards cannot be sent to Nepal.)

Parcels (prepayment compulsory).

Parcels not exceeding 12½ seers (1,000 tolas) in weight:—

	Rs. a.
Not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden should be registered. There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India.

Registration fee.	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	3

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 upto Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable. There is no money order service to Nepal.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India. In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2-2-0 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1-1-0 for the first 12 words and 2 annas for each additional word.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.	Rs. a.
Where the value insured does not exceed Rs. 100	0 3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0 4
Where the value insured exceeds Rs. 150 but does not exceed Rs. 200	0 5
For every additional Rs. 100 or fraction thereof over Rs. 200 and upto Rs. 1,000	0 2
For every additional Rs. 100 or fraction thereof over Rs. 1,000	0 1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below), is as follows:—

Letters.—To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates. To Burma—2 annas for the first tola and 1 anna for every additional tola or part thereof.

To all other countries.—3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single .. .. .. 2 annas.

,, Reply .. .. .. 4 annas.

Postcards to Burma: Single 1 anna and reply .. .. 2 annas.

Printed Papers.—¾ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight .. .. 3½ annas.

For every additional 2 ounces or part of that weight .. .. ¾ anna.

Samples.—1½ annas for first 4 ounces and ¾ anna per 2 ounces thereafter.

Printed Papers, Business Papers and Samples.—To Burma, 9 pies for the first five tolas and 6 pies for every additional 5 tolas or part of that weight.

Parcels.

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below:—

(i) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

For parcel	*Via* Gibraltar. Rs. a. p.	Overland. Rs. a. p.
Not over 3 lbs.	1 8 0	1 13 6
Over 3 lbs. but not over 7 lbs.	2 12 0	3 1 6
,, 7 ,, ,, 11 ,,	3 15 0	4 2 6
,, 11 ,, ,, 22	6 3 0	7 3 0

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

These parcels are delivered by the post office and the postage paid carries them to destination.

(*ii*) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from India through the medium of the P. & O. S. N. Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge *within a radius of one mile from the Company's Head Office in London;* if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit *beyond* India, but must, if they contain coin, etc., be insured *during transit in India.* No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Hong-kong, Malaya [the Straits Settlements, (including Labuan-British) and the Federated Malay States of Perak, Selangor, Negri-Sembilan and Pahang], Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—No limit.

To all other destination—4 lbs. 6 oz.

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Hong-kong, Malaya, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Aden or Ceylon—200 tolas.

To all other destinations—1 lb. 2 oz.

Parcels.—11 lbs. or 20 lbs.

Limits of Size.

Letters—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note.—Printed papers sent open, *i.e.*, without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples.—To Great Britain and Northern Ireland, and Ireland, Burma, Ceylon, Hong-kong, Malaya, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length *plus* twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

	Rs.	a.
On any sum not exceeding Rs. 10 ..	0	3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0	6
On any sum exceeding Rs. 25	0	6

for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.

To countries on which money orders have to be drawn sterling, the rates are as follows:—

	Rs.	a.
On any sum not exceeding £1	0	4
,, ,, exceeding £1 but not exceeding £2	0	7
,, ,, ,, £2 ,, ,, £3	0	10
,, ,, ,, £3 ,, ,, £4	0	13
,, ,, ,, £4 ,, ,, £5	1	0
,, ,, ,, £5	1	0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Registration fee.

For each letter, post-card & packet of printed or business papers and samples .. 3 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff."

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

	Annas
Where the value insured is not exceed Rs. 180	4½
For every additional Rs. 180 or fraction thereof	4½

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

	Annas
Where the value insured does not exceed £12	4½
For every additional £12 or fraction thereof	4½

Acknowledgment fee.—3 annas for each registered article. 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India.

Air Mails.—Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Burma and Ceylon. The Inland Air fees are as follows :—

(*i*) For a postcard .. 6 pies *plus* ordinary postage.

(*ii*) For a letter and packet.. 1 anna for each tola or part thereof *plus* ordinary postage.

For Air fees to foreign countries, *see* the *Post and Telegraph Guide.*

Magnitude of Business in the Post Office :— At the close of 1939-40, there were 118,020 Post & Telegraph officials, 24,741 post offices and 158,240 miles of mail lines. During the year, 1,255 million articles, including 39.3 million registered articles were posted ; stamps worth Rs. 66.4 millions were sold for postal purposes ; about 42 million money orders of the total value of Rs. 758 millions were issued ; 846 thousands of Indian Postal orders to the value of Rs. 30 lakhs were sold ; a sum of Rs. 140 millions were collected for tradesman and others on V. P. articles, about 2.6 million insured articles valued at 773 millions of rupees were handled. Customs duty aggregating over 5.7 million was realised on parcels and letters from abroad ; pensions amounting to about Rs. 17.2 millions were paid to Indian Military pensioners and nearly 17,000 lbs. of quinine were sold to the public. On the 31st March 1940, there were 4,583,000 Savings Bank Accounts with a total balance of Rs. 783.2 millions and 100,700 Postal Life Insurance Policies with an aggregate assurance of Rs. 200 millions.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering (including wireless) side of a Chief Engineer, Telegraphs, with one Deputy Chief Engineer, and two Asstt. Chief Engineers. For traffic work there is a Deputy Director-General, with two Assistant Deputy Directors-General. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. These five Circles are divided into eighteen Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification proved an unqualified success and was gradually extended to other Circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the Circles are now controlled by the Postmasters-General.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration. It now forms part of the Government of Burma which started its independent career on and from that date.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Burma or Ceylon are classed as Inland telegrams. The tariff for Inland telegrams is as follows :—

	For delivery in India. *Private and State.* Express. Rs. a.	Ordinary. Rs. a.
Minimum charge	1 4	0 10
Each additional word over 8..	0 2	0 1

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

	For delivery in Burma. *Private and State.* Express.	Ordinary.
	Rs. a.	Rs. a.
Minimum charge	2 6	1 3
Each additional word over 8	0 4	0 2

	For delivery in Lhasa (Tibet). *Private and State.*		For delivery in Ceylon. *Private and State.*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge.	1 10	0 13	2 2	1 1
Each additional word over 12..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram .. .. — Minimum charge for an ordinary telegram.

Notification of delivery — Minimum charge for an ordinary telegram.

Multiple Address telegrams, each 100 words or less in each copy beyond the first .. .. 4 annas.

Colation .. .. .. One half of the charge for an ordinary telegram of same length.

	Rs.
For acceptance of an Express telegram during the hours when an office is closed. If both the offices of origin and destination are closed ..	2
If only one of the offices is closed.	1
If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office.	1

Signalling by flag or semaphore to or from ships—per telegram .. .. .. — The usual inland charge *plus* a fixed fee of 8 ans.

Boat hire .. .. .. Amount actually necessary.

Press telegrams.	For delivery in India. Express.	Ordinary.	For delivery in Ceylon. Express.
	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 2	0 9	1 2
Each additional 5 words over 40 in respect of India, each additional four words over 32 in respect of Ceylon ..	0 2	0 1	0 2

The address is free.

Greetings Telegrams.—Greetings and messages of congratulations may be sent by telegram at reduced rates on occasions of (1) Christmas and New Year (2) Diwali (3) Birthday (4) Id (5) Conferment of Title (6) Marriage (7) Examination (8) Bijoya (9) Journeys (10) Elections and (11) Acknowledgment for greetings.

The charges payable will be 7 annas or 14 annas for each such telegram according to class, Ordinary or Express, consisting of not more than 6 words as follows:—

(*a*) 4 words in the addressee's name and address;

(*b*) 1 word as sender's name.

(*c*) The message consisting of Stock Phrases will be counted as one word.

Each additional word over 4 words in items (*a*) or 1 word in (*b*) will be charged at 1 anna for Ordinary and 2 annas for Express. In the message itself no additional word will be allowed.

Inland De Luxe Telegrams.—Senders of Greetings telegrams to or from offices in India may also use their own phraseology in such telegrams instead of using the Stock Phrases, on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary).

This DE LUXE service is not applicable to telegrams for Burma.

The sender of a DE LUXE telegram should write before the address the special instruction =LX= which will not be charged for.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows:—

Cables are not now accepted to the following enemy or enemy-occupied countries.—Germany, Italy, Belgium, Denmark, Norway, Luxemburg and France.

Urgent Telegrams—
Rate double of ordinary rate.

Daily Letter Telegrams—
One third ordinary rate with a minimum charge for 25 words.

Code telegrams are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire are accepted at 2/3rds of the ordinary rate (*Vide clause* 425, *P. & T. Guide*).

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration, Reply Paid, etc.

Full lists published in Post and Telegraph Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India and transmitted *via* the coast stations at Bombay, Calcutta, Karachi, Madras or Port Blair the charge is thirteen annas per word ordinary) or eight annas per word (code) in early all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted *to ships at sea* through the coast stations mentioned in the preceding paragraph:—

	Total charge per word. Ordinary. Rs. a.	Code. Rs. a.
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below ..	0 13	0 8
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy ..	0 8	0 5
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12	0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, *e.g.*, R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee.

NIGHT LETTER TELEGRAMS.

Night Letter Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter Telegram Service (DLT) will remain in force, at the same rates and under the same conditions as prescribed for Daily Letter Telegrams, except as follows:—

(i) They will be delivered on the morning of the day following the day of booking.

(ii) The special instruction and the class prefix for Night Letter Telegrams will be NLT.

EMPIRE SOCIAL TELEGRAMS.

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of transmission and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following the day of acceptance; where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter. Minimum charge for an Empire Social Telegram is Rs. 3-6-0 for the first 12 words (excluding the Special Instruction-GLT-which will not be charged) and 4½ annas for every additional word.

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe."

Foreign De Luxe Telegrams.—Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

annas per telegram in addition to the charge at the appropriate rate according to the class (*i.e.*, Urgent, Ordinary, Code, Deferred, DLT., etc.) is charged for such telegrams.

Greeting Telegrams.—Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th January inclusive at special reduced rates, subject to a minimum charge for 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Socials Telegrams.

Growth of Telegraphs:—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 102,400 miles of line including cable and 637,100 miles of wire including conductors respectively, on the 31st March 1940. The numbers of departmental telegraph offices were 257 and 84, respectively, while the number of telegraph offices worked by the Post Office rose from 1634 to 4,086.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1939-40.
Inland ..	Private ..	4,107,270	14,204,867
	State ..	860,382	1,026,561
	Press ..	35,910	441,201
Foreign ..	Private ..	735,679	2,828,535
	State ..	9,896	48,743
	Press ..	5,278	61,374
		5,754,415	18,611,281

The outturn of the workshops during 1939-40 represented a total value of Rs. 19,68,000.

Wireless.—The total number of departmental Wireless Stations open at the end of 1939-40 was 22 of which only 3 booked telegrams direct from the public.

Six of these stations were for communication with ships at sea and thirteen worked as aeronautical stations in connection with regular air services.

Telephones.—On the 31st March 1940 the number of Departmental telephone exchanges was 282 with 26,729 straight line connections and 4,089 extension telephones. The number of telephone exchanges established by Telephone Companies was 24 with 54,935 telephones.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1939-40 was Rs. 26,56,150 and Rs. 17,70,80,853 respectively. The receipts for the year ended 31st March 1940 amounted to Rs. 12,48,52,000 and charge (including interest on capital outlay) of Rs. 11,58,93,000, the result being a net gain Rs. 89,59,000.

Public Health.

The history of the Public Health departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, and funds were available. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. This condition continues under the Government of India Act of 1935. The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed."

Vital Statistics.

India's birth rate in 1938 was more than twice that of England and Wales; her death rate was also more than twice that of England and Wales and nearly one and a half times that of Japan; and her infantile mortality rate was more than three times that of England and Wales and one and a half times that of Japan. "The information furnished for the great group of infectious diseases of world import, *i.e.*, plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says an earlier Public Health Report) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylos-tomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation." These observations are as true to-day as when they were made.

In June 1937 His Excellency the Viceroy, Lord Linlithgow, inaugurated the Central Advisory Board of Health. This body had existed prior to 1923, when it was abolished on the recommendation of the Inchcape Retrenchment Committee. It has now been reconstituted on up-to-date lines, after consultation with the provinces, in a manner which brings it into conformity with the constitutional changes in the country. Its Chairman is the Member for Education, Health and Lands with the Government of India. Most of the provinces have nominated their Ministers in charge of Public Health as their representatives on the Board. The Public Health Commissioner with the Central Government is Secretary-Member and several expert officials and members of the Central Assembly are also nominated to the Board. The inaugural meeting was addressed by Lord Linlithgow, who declared that everywhere in India he discerned unmistakable signs of a growing consciousness of the value and significance of public health. His Excellency particularly drew attention to the conditions of urban housing and sanitation and the comments thereon of the Whitley Commission on Labour which reported in 1931.

Anti-Tuberculosis Campaign.

In December 1937 H. E. the Marchioness of Linlithgow inaugurated a nation-wide campaign against tuberculosis. A sum of Rs. 76 lakhs was subscribed and the Tuberculosis Association of India was formed, incorporating the King Emperor's Anti-Tuberculosis Fund and King George's Thanksgiving Anti-Tuberculosis Fund. Provincial and State Associations were subsequently affiliated with the Central Association from which in each case they received a quota of 95 per cent. of the monies subscribed in their areas.

By the end of 1940, much progress had been made in the organised campaign against Tuberculosis, a Central clinic had been opened at New Delhi and a sanatorium was nearing completion at Kasauli. The functions of the central body are to offer expert advice, assist co-ordination and standardised methods, educate the public by propaganda and promote research. The affiliated bodies undertake the establishment of hospitals and clinics and the carrying out of preventive work. Thus there is demarcation of spheres of activity and positive results may be expected to follow in the near future.

U. P.	33	34	19.8	23·6
Bihar	32	32	21.0	21·8
Orissa	34	33	27.6	28·8
Bengal	33	29	23.6	25·0
C. P.	38	40	30.1	37·6
Bombay	38	39	25.4	27·9
Sind	18	18	11.1	11·3
Madras	36	36	22.3	21·6
Coorg	24	23	27.2	24·3
Assam	29	28	20.9	20·9
Ajmer-Merwara	37	35	29.8	25·1

Mortality during 1938.

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers, diseases affecting the abdominal organs, and lung diseases, Intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1938 :—

Province.		Cholera.	Small-pox.	Plague.	Fevers.	Dysentery and Diarrhœa.	Respiratory Diseases.	Other causes.	Total.
British India.	D.	236,143	39,844	17,371	3,883,627	292,482	536,649	1,679,004	6,685,120

The Public Health Commissioner with the Government of India in his preliminary report for the year 1939 states that the year was comparatively free from violent outbreaks of epidemic disease. Cholera which caused many deaths in 1938 in the provinces of Northern India, as the result of a wide dissemination of the infection following the Hardwar kumbhmela in April, prevailed to a much less extent in 1939. The N.-W-F. Province and Coorg were free from the disease while the Punjab and Sind recorded only 19 and three cholera deaths as against 5,760 and 343 in 1938. The Central Provinces and Assam also showed a considerable fall in cholera mortality, while the disease was prevalent in Bombay Presidency only in mild form. In Bengal, Bihar and the United Provinces, while the disease prevailed in epidemic form in certain areas, the available information suggests that the incidence of cholera was less in 1939 than in 1938.

Plague prevailed in epidemic form in the United Provinces, Bihar, the Central Provinces, Bombay and Madras Presidencies. The Central Provinces and Bombay reported increased incidence in 1939 while Madras experienced only a mild epidemic. In the other two provinces no abnormal rise in incidence was reported during 1939. Epidemic prevalence of small-pox was reported from the majority of the provinces. Bengal and Sind were exceptions, the incidence of the disease in 1939 having been less than during the previous year.

Under the existing system of registration in India, the majority of deaths are shown under certain large groups of causes such as "fevers," "respiratory diseases" and "other causes." The separation of the figures relating to the individual diseases contained in each group is impossible. No clear picture can therefore be obtained of the relative incidence from year to year of such diseases as cerebrospinal fever, tuberculosis or enteric fever.

CENTRAL ADVISORY BOARD.

In the field of public health administration the most important event was the second meeting of the Central Advisory Board of Health in January 1939. This Board, which consists of the representatives of the Central Government, of provincial Governments and of certain Indian States, was inaugurated in June 1937 for the purpose of providing a forum for the discussion and formulation of public health policy. Within the short period of its existence it has already given proof of its usefulness. Mention may be made here of some of the valuable results of the joint consultations between the different governments which the existence of the Board has rendered possible during the past three years. The problems associated with the health of the mother and child are of supreme importance to every country and, in India, the high rates of child and maternal mortality place this branch of health work in the forefront of the national health programme. A special committee appointed by the Board reviewed the whole question and submitted a report, which has been approved by the Board and which should provide for many years a sound basis for the orderly development of maternity and child welfare work in this country.

The important part that festivals and large gatherings of pilgrims play in the spread of cholera is a subject of great concern to health authorities in India. While an improvement of the sanitation of the villages and towns through which the pilgrims pass is the most effective means of prevention, its realisation must be slow in view of the cost involved. Under the circumstances the most practical method of minimising the chance of the spread of cholera appears to be the provision of mass protection through anticholera inoculation. The possibilities of introducing a system of compulsory inoculation among pilgrims was investigated in 1939 by a special committee.

SOCIAL LEGISLATION

Repeated stress has been laid in the Health Commissioner's reports on the fact that public health cannot be regarded as an entity distinct from the general social and economic life of the community. It is, therefore, satisfactory that the advent of provincial autonomy and the conferment of extensive powers on Provincial Governments have been followed in many provinces by social legislation which will undoubtedly have far-reaching effects on the economic life and general well-being of the people. Agricultural indebtedness, land tenure and industrial problems, to cite a few examples, are all receiving serious attention and, in so far as legislative and administrative action goes to raise the standard of life, these measures will inevitably help in improving the standard of public health.

In order that there may be no undue feeling of pessimism, it should always be remembered that, less than a century ago, conditions in Great Britain were not much different from those found in India to-day and that, with respect to other countries, reduction of the general death rate below that at present recorded in India dates back to only a few years. There seems no reason why India should not accomplish what has been achieved in other parts of the world, if only organised effort is continued and if public support is given to that effort.

POPULATION PROBLEM

In successive reports Health Commissioners have drawn attention to the urgency and importance of the population problem and, as this question has such an important bearing on all others relating to national reconstruction and to public health in particular, no apology is needed for returning to the subject. No useful purpose is ever served by shutting one's eyes to indisputable facts. The subject is no academic one; it is, for instance, not merely a matter of the verification or otherwise in this country of the Malthusian doctrine of population outstripping the food supply in the presence of unrestricted multiplication of numbers. Available data may be insufficient for drawing definite conclusions, but it seems too optimistic to assume that the population problem is neither pressing nor deserving of serious study because of possible extensions of improved agricultural practice and the possible application of new scientific discoveries.

In India the low standard of living and the steadily growing population constitute a disquieting combination, but the resources of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

country are immense and there is no need for despair so long as the different governments are determined so to organise the material and human resources at their disposal as to produce the maximum benefit to the community. Most of the questions relating to the health and economic welfare of the people are statutorily the functions of provincial Governments and it is their responsibility to set up the machinery necessary for the study of demographic problems within their areas of jurisdiction. In addition to official agencies, universities and research institutions should be induced to help and the work could perhaps be suitably co-ordinated by the formation of a committee in each province to plan the necessary investigations and to place its expert knowledge at the disposal of the Government so that a sound economic and social policy might be reached. Such a committee could also perform the extremely useful function of educating public opinion on correct lines.

Natural increases accruing from excess of births over deaths for decennial periods from 1871 to 1930 and for individual years from 1931—38 are given in the following table:—

—	Annual number of Births.	Birth rate p.m.	Annual number of deaths.	Death rate p.m.	Annual excess of births over deaths.
1871–1880 ..	Not available.	Not available.	3,540,202	19	Not available.
1881–1890 ..	4,565,687	23	5,058,578	26	492,891
1891–1900 ..	7,174,694	33	6,662,417	31	512,277
1901–1910 ..	8,591,136	37	7,657,513	33	933,623
1911–1920 ..	8,810,018	37	8,142,364	34	667,654
1921–1930 ..	8,345,364	33	6,347,063	25	1,995,301

Digitized by Arya Samaj Foundation Chennai and eGangotri

The health of the British Army in India in 1939 was on the whole thoroughly satisfactory, although the admission rates for both officers and men increased compared with the previous year, both for general admissions and for particular diseases.

This increase was more apparent than real in that there were considerable reductions in the strengths of both officers and men of the British Army in India during the year. These reductions took place principally in the latter half of the year, and many of the sick and unfit from the units which proceeded out of the country remained to affect relatively the proportion of "sick" to strength.

Actually there was a reduction of nearly 100 admissions for officers and over 2,000 for men during the year, and ratios of sickness based on the original strengths would give a yet happier picture of the health of the Army.

It can safely be claimed that the year 1939 was satisfactory, particularly so in view of the increased chances of disease which war activities brought, and that from the medical point of view the fighting fitness of the army was good.

Similarly, the health of the Indian Army was on the whole satisfactory. There were no epidemics of any note and such increase as there was, *viz.*, 32.2 per 1,000 in admission rates, can be fully accounted for by conditions of war service. Large numbers of reservists returned to their units, there was a considerable influx of recruits and many defensive posts had to be manned in relatively unhealthy areas. Death rates decreased to 2.12 per 1,000 and invaliding increased to 6.43 per 1,000. The average constantly sick figure increased to 16.25 per 1,000.

Among officers of the British Army in India, 435.1 per 1,000 were admitted to hospitals during the year, compared with 428.9 in 1938. The death rate, in spite of the increase in admission rates, fell sharply, at 2.14 being less than half that of the previously recorded year. The average constantly sick in hospital increased slightly—14.88 compared to 13.86 in 1938, and the invaliding rate jumped up by 10 per 1,000 to 25.09 for the year. 506.7 per thousand were treated as out-patients compared to 527.9 in 1938.

Among British soldiers there was a further sharp rise, 63 per 1,000, in admission rates from 603.7 in 1938 to 666.1 in 1939, a figure well in excess of any since the post-war quinquennium 1920-24. The actual number of admissions showed the sharp reduction of 2,000 (approx.) on the previous year, the relative increase being due to the departure of considerable numbers of British troops overseas and the retention in India for a time of their unfits. Invaliding, at 9.14 per 1,000, showed a further reduction.

The death rate was 2.75 per 1,000, which was almost the same as 2.78 of the previous year and little above the quinquennial average of 2.54.

The chief causes of death were:—

Local injuries (including gunshot wounds)	0.78 per 1,000
Infectious diseases	0.58 „ „
General injuries	0.39 „ „
Digestive diseases	0.36 „ „
Circulatory diseases	0.19 „ „
Pneumonia	0.14 „ „

The principal cause of admission to hospital of British troops was malaria of which there were 58.1 cases per 1,000, diseases next in order being cellulitis with 51.1, tonsilitis 34.4, gonorrhoea 32.7, sandfly-fever 30.7, dysentery 29.0, bronchitis 18.2, diarrhoea 18.2 and sprain 17.0.

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1939.

Ratios per 1,000 of Strength.

LEPROSY IN INDIA.

A conservative estimate of the incidence of leprosy in India places the figure in the neighbourhood of a million persons affected and, though the number of infectious cases may be only a quarter of this figure, the amount of sickness, suffering and incapacitation caused by the disease is immense. Leprosy in India is mainly a rural problem although the growth of towns and cities, together with the development of industrialism, has, in recent years tended to produce a steady flow of lepers into urban areas. The prevalence of the disease is highest along the eastern coast of the peninsula and in the western parts of Bengal. From this area the disease gradually diminishes in incidence to the north and west, until a fairly wide area of comparative freedom from leprosy is reached, comprising the northern half of Bombay Presidency, Gujarat, Rajputana, the western portion of the United Provinces, the Punjab, the N.-W.F. Province, Sind and Baluchistan.

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committee are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest:—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers, for

(*a*) financially it would be impossible;

(*b*) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects:—

(*a*) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(*b*) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer.

The Council's main work during the first several years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product of its activities is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

The survey figures published by the Council have aroused much interest throughout India and many Provincial Governments give grants-in-aid for asylums, homes and clinics. Through the generosity of the Council and of the Calcutta School of Tropical Medicine training in modern methods of treatment is given to doctors sent up by all Provinces and several Indian States and they, in turn, pass on their training to others in their own parts of the country. The Calcutta School commenced leprosy research in 1920, is still continuing it and has obtained most valuable results. Treatment has consequently improved and early cases are more readily coming forward than formerly.

His Excellency the Viceroy is the President of the Indian Council, the Director General of the I.M.S., the Chairman of the Governing Board, and Sardar Bahadur Balwant Singh Puri, the Honorary Secretary.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is most prevalent and only recently have people come to realise the gravity of this huge problem.

India is regarded as a land of blindness by many in foreign countries; whether this statement is justified or not, at present it is difficult to prove.

It is probably correct that there are about one and a half million blind persons in India, and for every one person blind there are three partially blind, out of a total population of about 360 millions, whereas the census figures of 1931 show about half a million blind persons.

The system of ophthalmic relief now prevailing in Egypt was started in 1903 by a gift of a sum of £43,000 by Sir Ernest Cassells. Thus arose the ophthalmic section of the Public Health Department under a Director of ophthalmic hospitals and a start was given by establishing eye hospitals. These hospitals became a definite branch of the Egyptian Government in 1906. The scheme subsequently developed, the cost being borne partly by Government grants and local taxation and partly by donations and subscriptions.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Between 1904 and 1914, sixteen eye hospitals were opened in various parts of the country, the permanent hospitals being reinforced by travelling eye dispensaries which are an important part of the system.

In India there has been practically no effort to count the number of blind, although the method is very simple to carry out, *i.e.*, a person is considered blind when he cannot count the fingers of a hand held up in front of his eyes at a distance of one foot.

This is the method followed in Egypt and this was adopted by the Government of Bengal in the census of 1931 at the suggestion of Lt.-Col. E. O'G. Kirwan, C.I.E., I.M.S.

The first blind relief Association in India was started in Western India in the Ratnagiri District by the late Mr. C. G. Henderson, I.C.S., in 1919. In subsequent years, several branches were inaugurated. This Blind Relief Association carried out a special survey of the blind in some districts with the following results and wherever this has been done, the census figures have been found far too low. Nasik Dist. 4·4 per 1000; Bijapur 2·6; Ratnagiri 1·5; the corresponding census figures are 1·74; 0·7 and 0·7. In the United Provinces a Deputy Commissioner had a count made and found no less than 9 persons blind per 1000.

Unfortunately this Blind Relief Association, with its branches, practically collapsed after Mr. Henderson left due to lack of funds.

Mr. Henderson resigned from the service in 1928 and an All-India Blind Relief Association was started in the year 1929 due to his devotion and energy.

Upto the end of 1929, there was no blind relief Association in Bengal where there are about 35,000 blind persons out of a total population of 4,66,95,536 (census 1931).

In March 1930, the Association for the Prevention of Blindness, Bengal, was started in Calcutta with a strong Committee with Sir George Rankin, the then Chief Justice of Bengal, as President.

The first notable donation of $500 dollars was received from Mrs. Winifred Holt Mather, Founder-Secretary, New York Association for the Blind, New York, U.S.A., who with her husband came to India in connection with the work of prevention of blindness. Six years later in March 1936, the first travelling eye dispensary was started in Bengal by this Association out of a gift of Rs. 35,000 from Their Majesties' Silver Jubilee Fund, the amount being the budgeted recurring cost of the dispensary for five years.

By 1940, the Association possessed four such travelling eye dispensaries and it was in 1939-40 that the Government of Bengal sanctioned a recurring grant of Rs.15,000 for three years. In March 1941, this Association added one more travelling eye dispensary, making a total of five now operating in Bengal.

These travelling eye dispensaries have been started as a temporary measure until such time as there are more eye surgeons and sufficient eye hospitals scattered throughout Bengal. Upto March 1941, 2,85,606 cases have been treated and 8,071 operations have been performed by these dispensaries.

These travelling eye dispensaries work in the district headquarters and sub-divisions and also penetrate into the interior to bring preventive education and curative relief to the villages in the rural areas. The activities of these dispensaries are mainly preventive but curative work is also undertaken simultaneously which appeals much more to the public.

Preventive measures are carried out by lectures, demonstrations with the help of magic lantern slides, movie shows, posters, pamphlets, leaflets, models and first aid outfits.

Curative work, *viz.*, treatment of eye diseases and operations, is carried out in dispensaries and hospitals but operations are only done where in-door accommodation can be arranged.

All operative works are suspended one week before a dispensary is due to move on so as to enable the doctors to complete the after-care of the operations they have done.

In addition to preventive and curative works, medical officers as a routine method carry out an enumeration of the blind by methods which are simple and accurate. They also carry out school inspection, *viz.*, systematic survey of eye defects amongst school students.

The Bengal Association has already done counts in 500 villages and have found about 148 blind persons per 100,000, which is double the number recorded in the census of 1931.

In 1939, the Association has started a sixth unit called the Eye Examination and Lecture Unit for Calcutta and its suburbs.

The activities of this Unit are mainly preventive and comprise lectures and demonstrations in schools, exhibitions, jute mills and other public places.

The eye examination of students in schools, workers of jute mills and inmates of orphanages forms an important part.

Considerable progress was made in 1934 with a scheme which the Indian Red Cross Society is carrying out in co-operation with the National Institute for the Blind, London, for training teachers in the prevention of eye disease and care of the eyes. The National Institute gave a grant of £170 for the purpose, out of which a sum of Rs. 1,650 was given to the Association for the Prevention of Blindness, Bengal, (through the Bengal Provincial Branch of the Indian Red Cross Society) for organising lectures in schools in Bengal and with this amount this Association delivered a course of two lectures each in 82 schools in Bengal.

St. Dunstan's Section of the War Purposes Fund.—In November, 1939, His Excellency the Viceroy initiated the St. Dunstan's Section of the War Purposes Fund, to afford relief to the war-blinded, an appeal for which was carried on throughout India by Sir Clutha MacKenzie, working on behalf of His Excellency and St. Dunstan's. A small All-India St. Dunstan's Committee was formally constituted at a meeting presided over by the Hon'ble Sir A. Ramaswami Mudaliar, Commerce Member to the Government of India, with Sir Ramaswami as Chairman of the Committee, Mrs. T. S. Pillay as Hony. Secretary, and Sir Ernest Burdon and Mr. A. C. Badenoch as Hony. Treasurers. The Chairman emphasised at the meeting that the first claim on the funds subscribed would be for the Indian War-blinded.

MALARIA.

Malaria is without doubt India's major public health problem both from the point of view of morbidity and that of mortality. Whilst no province can claim to be free from its ravages, in some the incidence of malaria is extremely high. In Bengal, it is stated that more than two-thirds of the villages are subject to malaria and that "over 60 per cent. of the total population actually suffer from it every year. Roughly about 1,000 people die from malaria every day throughout the year." It is unofficially estimated that over India as a whole, upwards of a million people die from malaria every year.

Moreover, its incidence is probably three times higher in the rural areas than in the towns, so that it forms a terrible handicap to improved health and a higher standard of living among the rural populations. The three main lines of attack may be classified as (1) anti-mosquito measures, (2) general quininisation and (3) improvement of the economic standard of the people. Anti-mosquito measures on a scale sufficient to influence the incidence of malaria are probably not within the bounds of practical politics, although considerable relief would probably be attained by reduction of what is known as man-made malaria. The problem of quinine is complicated; serious difficulties deter rapid advance to any scheme of adequate quininisation of the malaria-striken populations. Whether cheaper quinine can be made available is a matter which demands further serious study.

The Malaria Institute of India, which has for many years past been engaged in malaria researches, has made clear the directions in which practical anti-malaria works should be tackled. The time seems ripe for a wider use of the knowledge available, but it is much to be feared that financial stringency will continue to handicap progress. Recognising the importance of the malaria problem, the Government of India some years ago placed a special grant of ten lakhs of rupees at the disposal of the Governing Body of the Indian Research Fund Association for malaria research. On the advice of the Public Health Commissioner, the Governing Body decided that this grant should be devoted to intensive control schemes carried on for a period of years in restricted areas in order to demonstrate the practical method required for reduction of the incidence of malaria. Following that decision, grants were made to four provincial Governments on the conditions that those Governments contributed amounts equal to the I.R.F.A. grants and that approved schemes should be placed in charge of experienced anti-malarial officers. In addition, a grant was made to Delhi Province for anti-malarial work in the Najafgarh Health Unit area and for additional schemes in the villages lying round the cities of Delhi and New Delhi.

In Madras, Bengal and the United Provinces, suitable areas were selected on the recommendation of officers of the Malaria Institute of India in consultation with the provincial Directors of Public Health. The grant to Assam provided additional funds to the Assam Medical Research Society which had been engaged for some years past in intensive anti-malarial work. It is believed that these five-year schemes will not only be of great benefit to the local populations concerned, but will form a valuable guide to all Governments and malariologists in India in planning future anti-malarial work.

Whilst all these facts indicate that the problems associated with malaria have by no means been lost sight of, they are so important that much more requires to be done before any marked general reduction of malaria incidence will be obtained. Both governments and local authorities will require to allot much larger sums than in the past for anti-malarial works if permanent betterment is to be achieved. Moreover, no expenditure should in future be sanctioned by either authority until proposed preventive schemes have been thoroughly investigated and finally approved by skilled malariologists.

PLAGUE.

Plague in India started in Bombay in 1896 and, within a short time, the disease spread widely through the country. It reached its maximum in 1904 with a total mortality of 1,143,993. In contrast to this the average annual mortality from plague during 1936-38 was 18,759. That a considerable reduction in its geographical distribution has also taken place is clearly indicated. The N.-W.F. Province, the Punjab, Delhi, Orissa, Bengal, Sind, Assam and Ajmer-Merwara were free from the disease during the year, while in Madras Presidency plague was prevalent only in a mild form. After a marked decline in the number of plague deaths from 24,560 in 1933 to 406 in Bombay Presidency in 1938, this province registered an increase to nearly 1,500 deaths in 1939. In the other provinces the position in 1939 was substantially the same as in 1938. However, the history of plague through the centuries is a warning against taking a complacent view of the reduced prevalence of the disease in India. It is known that the disease can smoulder in its endemic homes for long periods and that, on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides. While therefore it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slacking of effort for its complete eradication should be permitted. In fact the fight against the disease both by administrative measures and by research into its epidemiology, treatment and prevention has continued uninterrupted during the whole period.

In March 1941 it was announced that experiments carried on at the Haffkine Institute, Bombay, with sulphathiazole in the treatment of plague had yielded results which appeared to offer an effective cure for this scourge. Lt.-Col. S. Sokhey, Director of the Institute, said that by the use of this drug at Bettiah in Bihar and later at the Plague Hospital at Latur in Hyderabad, Deccan, the percentage of recoveries in nonsepticaemic cases was cent per cent, while in septicaemic cases the cure was 80 per cent. The drug was prepared at the Institute and was available in quantity at a cheap cost.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. Every year more than 2½ million Indian children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres throughout India. The amalgamation of these two Bodies which took place in 1931 forming the Maternity and Child Welfare Bureau, has undoubtedly increased and developed the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field that a consistent, widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families, hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres, many of them assisted by the M. & C. W. Bureau, Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, undernourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

The Maternity and Child Welfare Bureau, which works in conjunction with the Indian Red Cross Society, spends a large proportion of its funds on education. It maintains schools for training health visitors and nursery schools. The Bureau provides a central adviser on the subject and thus helps co-ordinate work in different provinces. The Victoria Memorial Scholarship Fund is earmarked for the training of indigenous and other midwives. There is a large and growing demand for these attendants and systematic registration of them is desirable.

INDIAN RED CROSS SOCIETY.

When the Great War first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralised, and are being carried on through 27 Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of Society may be spent are :—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.
2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.
3. Child welfare.
4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.
5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.
6. Home Service Ambulance Work.
7. Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised.

The Society has five grades of subscribing members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Re. 1 and Rs. 12 annually or consolidated payment of Rs. 50. At the end of 1940 there were 22,299 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations, a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces have followed suit and at the end of 1940 the number of members was over 6 lacs.

Constitution:—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society, of whom 12 are the Vice-Presidents nominated by Provincial or State Branches, 8 selected by the Society at the Annual General Meeting from among the members of the Society, and 5 nominated by the President.

The present Chairman of the Managing Body is Lt.-General G. G. Jolly, C.I.E., K.H.P., I.M.S., and the Secretary, Sardar Bahadur Balwant Singh Puri, O.B.E.

The Indian Red Cross Society professes itself as an essentially Indian Society. Most of its members (about 96 per cent.) are Indians. It is controlled in India. Its headquarters are at New Delhi. The Society received a gift of a lakh and a half of rupees from H. H. the Nawab of Junagadh to build headquarter offices in New Delhi. It has branches in every Province of British India and in several Indian States. These branches are again sub-divided into districts, so that there is a network of Red Cross centres all over India. The provincial branches appoint representatives to the Central Committee, called the Managing Body. This Central body, after deduction of management expenses, distributes all its income from invested funds among the branches for their activities.

Like other Red Cross Societies, the Indian Society has never lost sight of its primary obligation to act as an auxiliary to the Army Medical Service in case of war. It maintains a Central Supply Depot administered by headquarters. A large number of military hospitals are supplied with additional equipment and comforts, and these are much appreciated. The Bengal Branch has a Literature Committee, which supplies regular parcels of literature to troops, especially to those stationed in lonely outposts, and many grateful letters of thanks are received. Discharged soldiers suffering from chronic diseases, particularly tuberculosis are referred by the Army Medical Service to the Red Cross, which follows up the men on their return to their villages, and arranges, where possible, for their treatment. Under this scheme many hundreds of cases have been dealt with.

The greater part of the Society's income is spent upon its peacetime programme. It seemed to those who directed the Society in its early years that the first and most crying need was to teach mothers how to bring up healthy children and child welfare has been placed in the forefront of its programme.

The health visitors employed in the child welfare centre are trained at Health Schools which are at Delhi, Lahore, Calcutta, Poona and Bombay. Several students from India have been granted scholarships by the League of Red Cross Societies to follow the international courses for Public Health Nurses in London. The training is now arranged by the Indian National Committee of the Florence Nightingale International Foundation with the help of a scholarship given by the Indian Red Cross Society from the income of a special endowment received by the Society from the Silver Jubilee Fund.

Special mention must be made of the Army child welfare centres, most of which receive generous support from Red Cross funds. These centres are run for the wives and children of British and Indian troops, and are doing excellent work. The Central Provinces and Berar Branch of the Society opened a Nursery School in Nagpur, and this pioneer school, under Red Cross auspices, has proved a great success.

Popular health education is carried on steadily by the Society by varied methods. Health lectures in many different vernaculars are regularly organised under Red Cross auspices illustrated by films and slides.

A large number of civil hospitals in India receive regular assistance from Red Cross funds.

FINANCES.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December, 1940, stood at a capital investment of the face value of approximately Rs. 76¾ lakhs. The income derived from the capital of the Society (which is 3 lakhs at present), after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

The Indian Red Cross Society maintains a Roll of Trained Nurses for civil emergencies. Steps were being taken at the close of 1940 for strengthening its roll which had been depleted on account of the war demand for nurses.

The declaration of war did not find the Indian Red Cross Society unprepared. All the steps to be taken had previously been carefully thought out and embodied in the "Mobilisation Plan", which after criticism by Provincial Branches and final approval by the Red Cross and St. John Ambulance organisations was distributed to all Branches in March, 1939. On the declaration of war, the Mobilisation Plan at once brought into operation the Central Joint War Committee, consisting of the Chairman of the Indian Red Cross Society and of the Executive Committee, St. John Ambulance Association, and non-official members of these two bodies, the Director of Medical Services in India, and the Red Cross Commissioner. In addition, a Central Finance Sub-Committee of 6 members was set up. Similar Joint War Committees and Finance Sub-Committees were appointed by Provincial and State Branches. The object of these joint committees, as of the similar organisation in England, is to ensure that the Red Cross and St. John Association in their war work operate as one harmonious unit. Lt. General Sir Bertrand Moberley, K.C.I.E., C.B., D.S.O., is the present Red Cross Commissioner and his main duties are to act as Chairman of the Central Joint War Committee and Finance Sub-Committee, to keep in close touch with Army Headquarters and ascertain from the Adjutant General and the Army Medical authorities the comforts desired from time to time by the Indian Expeditionary hospitals. According to the information which he receives, he issues circulars to Provincial Joint War Committees explaining in what ways they can most usefully direct their energies and the energies of the numerous ladies' "work parties", which have been set up in all the big and many of the small towns throughout India.

It was arranged in the Mobilisation Plan that until an appeal brought in sufficient funds, war work should be financed by sale of the Red Cross Society's invested funds up to a maximum total of 10 lakhs of rupees. Sale of invested funds means less income available for the important Red Cross peace work, which the Society are anxious to continue as far as possible during the war. Therefore, after the sale of 1½ lakhs of invested funds, it was decided, with the approval of His Excellency the Viceroy, to issue the appeal, which appeared in the Press on the 21st November 1939, and a sum of Rs. 13,52,359 was received at headquarters up to 31st December, 1940, and total payments from this Fund during 1940 amounted to Rs. 2,51,183 leaving a balance of Rs. 11,01,176 which has been carried to 1941.

The Joint War Committee is looking after the needs of the Indian Expeditionary Forces serving in the Middle East, Malaya, other oversea areas and in Waziristan. Major General Bradfield, Hon. Red Cross Commissioner in London, arranged to send food parcels to Indian Prisoners of war in Germany. Arrangements are also made for despatch of letters to prisoners in Germany and Italy. Indian Red Cross Postal Message Scheme was introduced for sending messages to relatives in enemy and enemy occupied territory.

St. JOHN AMBULANCE ASSOCIATION (INDIAN COUNCIL) AND St. JOHN AMBULANCE BRIGADE OVERSEAS (EMPIRE OF INDIA).

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(*a*) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

(*b*) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(*c*) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic;

(*d*) The Organisation of Ambulance Corps, invalid Transport Corps, and Nursing Corps;

(*e*) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 398,000 certificates of proficiency in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft and over 18,000 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. In addition, over 80,000 certificates have been issued in the elementary course for school students known as Mackenzie School Course in First Aid, Hygiene and Sanitation.

The object of the Association is not to rival but to aid the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1940, 58,011 persons attended courses of instruction in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft. Of these 38,596 qualified for the Association's certificates: *i.e.* 35,166 in First Aid, 2,894 in Home Nursing, 342 in Hygiene and Sanitation and 194 in Domestic Hygiene and Mothercraft.

A new course of instruction in Air Raid Precautions has recently been introduced with the assistance of the military authorities. During 1940, 140 classes in this subject were held at various stations and 1,246 Certificates, including 310 Instructors, were issued to those who qualified for them. This instruction is at present confined to the personnel of the St. John Ambulance Brigade Overseas, but it may be extended to the general public with the approval of the provincial government concerned.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5 and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions.

Their Excellencies the Viceroy and the Marchioness of Linlithgow and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 18 members from the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which Sir Cameron Badenoch, C.S.I., C.I.E., I.C.S. Knight of Grace of the Order of St. John of Jerusalem, is the Chairman and Sardar Bahadur Balwant Singh Puri, O.B.E., the General Secretary.

The St. John Ambulance Brigade Overseas is a uniformed, disciplined body of men and women, all of whom are holders of First Aid, and, in the case of women also Home Nursing certificates. They meet together regularly for practice, are inspected and re-examined annually and undertake to turn out for public duty whenever required.

The Brigade in India is commanded by Sir Cameron Badenoch as Chief Commissioner for the Empire of India. Under him are 15 Districts covering almost all the provinces in British India and some of the Indian States, with headquarters at Lahore, Calcutta, Bombay, Madras, Bangalore, Lucknow, Nagpur, Patna, Delhi, Karachi, Peshawar and Shillong, and there are two also on the North Western and East Indian Railways. In charge of each District there is an Assistant Commissioner or a Commissioner according to the membership strength of the District, and as the work of the Brigade lies so much in the medical and surgical sphere, the Officers-in-Charge of the Districts are generally the administrative heads of the Civil Medical Departments of the respective provinces. It is their business to organise and maintain the training and efficiency of Ambulance and Nursing Divisions and to see that they are available for public service on occasions when they are required.

At the end of 1940 the Brigade in India consisted of 247 Ambulance Divisions, 76 Nursing Divisions and 47 Cadet Divisions (boys and girls) with a total membership of over 11,000. These Divisions render first aid on public occasions, for example festivals, processions and public assemblages of all kinds. At times of special emergencies they turn out promptly and remain on duty so long as they are required. Some of the recent occasions when Brigade members have rendered valuable service are the Bihar Earthquake (1934), when Calcutta members established a camp hospital at Monghyr, the Quetta Earthquake (1935) when Lahore members living in railway trucks at Quetta station gave valuable help to the stricken people, the Bombay riots in successive years, where the local Divisions earned the warm appreciation of the Government of Bombay, the Bihta railway disaster (1937) when the Dinapur Nursing Division gave prompt assistance, the Kumbh Fair at Hardwar (1938) when members from the United Provinces were on First Aid duty for over a fortnight and the Dacca Mail disaster (1940) when members of the Calcutta Police Sub-District rendered first aid and organized an emergency hospital at the Sealdah railway station.

The members of the Nursing Divisions enrol themselves as members of the Voluntary Aid Service to supplement the nursing branch of Medical Service of the Army in India in time of war. While the services of the Brigade personnel both men and women, trained in Air Raid Precautions are at the disposal of Provincial Governments for the training of the general public and are also utilized in connection with other measures which are adopted for the protection of the civil population against aerial attacks. They have also formed Transport Units at the ports and at present are engaged in evacuating casualties received from overseas.

Both the St. John Ambulance Association and Brigade work under the aegis of the Order of St. John of Jerusalem and as their work is complementary to that of the Indian Red Cross Society, close co-operation exists between the Order and the Society.

The war has greatly stimulated training in First Aid and Home Nursing, and consequently a very large number of men and women have in 1940 received training in these subjects in order to fit themselves for skilled service to the sick and wounded. A large number of new Ambulance and Nursing Divisions of the Brigade, consisting of the trained personnel, have also been registered this year. For its other war work the Association is working in concert with the Indian Red Cross Society, both at headquarters and in the provinces, under the title of the Joint War Committee of the Indian Red Cross Society and St. John Ambulance Association, an account of whose activities is given under the Indian Red Cross Society.

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore which has an up-to-date and well equipped Mental Hospital at Bangalore, built at a cost of five lakhs of rupees for three hundred early cases, and which is probably about the best of its kind in India, there are no mental hospitals in existence, so that persons suffering from all forms of mental disease are confined in the jails or lunatic asylums where hardly any provision exists for modern methods of treatment, where, of course, no provision exists for any kind of treatment. According to the last Census (1931) out of a total population of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded", an item that is not included in the figures of British India.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the Women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring them out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial branches; it gives scholarships to a number of women students at the medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women. It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 12 Provincial branches and a number of Local Committees.

The Government of India subsidise the Countess of Dufferin's Fund to the extent of Rs. 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 14 doctors and a junior service of 2 assistant surgeons. Medical women either British or Indian, holding registrable British qualifications, are eligible for the senior service.

The President is H. E. The Marchioness of Linlithgow. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary, Dr. G. Stapleton, O.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund, and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £27,750 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 14 women graduates in medicine of Indian Universities. Recruitment to the service is made (*a*) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Joint Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (*b*) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportion of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Indian Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty-two at entry. (*c*) She must be a first-class medical woman, *i.e.*, she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (*d*) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After three years of probation have been satisfactorily passed, their appointments are confirmed.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of 14, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 175 to Rs. 225 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the 14 members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each, paid quarterly, and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. An additional Rs. 1,39,000 was allotted to the Fund from Their Majesties' Silver Jubilee Fund in 1935. Thousands of midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. Registration is urgently needed. The Fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February, 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Chief Medical Officer, Delhi Province, and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 150 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is, for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Irwin Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for all students. There are good playing fields and a large swimming pool was opened early in 1938. The hospital is a fine modern building with accommodation for 200 in-patients for teaching purposes and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,20,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendent, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staff are maintained, available to the general public on payment of a prescribed scale of fees. These Hospitals also act as training institutions and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation went a step farther, through the establishment of the Bombay Presidency Nursing Association. This was composed of the various Nursing Associations in charge of individual hospitals, and worked under the Government. The principle on which the relations of this Association with the Local Associations was governed was that there was central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. The subject has been under discussion for years. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has established a Provincial Register preparatory to an All-India Register.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first step was taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hos-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pitals and afterwards spread to other hospitals in the Presidency. Ultimately, Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the associations are still largely dependent upon annual subscriptions towards the maintenance of their works.

The Bombay Presidency Nursing Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association and it appeared to the Committee improbable that it could be carried out. The auxiliary function of examining and granting certificates to nurses and midwives and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations were, however, carried out. The Memorandum, Rules and Bye-laws of the Association were not revised and brought into line with the actual working of the Association. This was done towards the end of 1927, when the Committee decided that some steps must be taken to do so. Accordingly a Sub-Committee was appointed to consider the revision and amendment of the Memorandum, Rules and Bye-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the rules piecemeal and that the only way to put the things in order was to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report, the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act, the New Memorandum of Association was brought into operation from 1st April 1929.

Establishment of the Bombay Nurses, Midwives and Health Visitors' Council.—The need of legislation for the Registration of Nurses, Midwives and Health Visitors had existed in the Province since a long time and with a view to protect the public from the activities of persons who misrepresent themselves to be fully qualified Nurses, Midwives or Health Visitors, Government, in April 1935, passed the Bombay Nurses, Midwives and Health Visitors' Registration Act. In the absence of State Registration the nurses trained in this Province were subject to certain disabilities and were refused Registration in other Provinces and in other countries, where state registration prevailed. The Act obtains for them the necessary status and secures their registration in other provinces in India or in other parts of His Majesty's Dominions which are willing to reciprocate with the Bombay Nurses, Midwives and Health Visitors' Council which was established in August 1935.

From the date of the establishment of the Council, the Bombay Presidency Nursing Association became defunct. The training and registration of nurses, midwives and Health visitors in this Province is now controlled by the Council. Nurses who are trained and registered in this Province can now get registration with the General Nursing Council of England and Wales and the General Nursing Council of Scotland and can practice as qualified nurses in these Countries.

Lady Minto's Indian Nursing Association.—The Lady Minto's Indian Nursing Association was founded in 1892 under the title of the "Up-Country Nursing Association" primarily, though not exclusively, to provide Europeans with the skilled services of the Nursing Profession.

The Punjab and the United Provinces were the first provinces to consider the possibility of providing nurses for private work, but it was not until 1906 that provision was made on a really adequate basis.

Lady Minto issued an appeal to the public both in India and England which met with a generous response, with the result that now Minto Sisters work in six centres and it is rare for a subscriber to the Association in any part of India to be refused the services of a nurse in case of need.

The financial liabilities of the Association are met from five sources:—

Interest on the Endowment Fund; Government Grant; Donations; Subscriptions; Fees.

It is the practice of the Association to invite people to become annual subscribers. This carries with it two advantages; priority of claim to the services of a Sister, and a reduction in the fees paid for those services. Thus Europeans who are members of the Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient.

The control of the Association is in the hands of two Committees; one in England and one in India.

The English Committee is responsible for the recruitment of the majority of the staff but if it happens that suitably and fully trained women are obtainable in India, the Central Committee in India has the power to enlist them on the spot.

In addition to this duty the Indian Committee deal with all matters of administration delegating to the Provincial Branches questions of local significance.

Her Majesty Queen Mary is a Patron of the Association.

Her Excellency the Marchioness of Linlithgow is President of the Central Committee in India.

Hon. Secretary:—Lieut.-Col. H. H. Elliot, M.B.E., M.O., M.B., F.R.C.S., I.M.S.

Chief Lady Superintendent:—Miss C. Wilson, Central Committee.

Lady Minto's Indian Nursing Association, Viceregal Estates, Simla, and Red Cross Buildings, New Delhi.

Secretary, Home Committee.—Miss. R. E. Darbyshire, R.R.C., 92, Ember Lane, Esher, Surrey.

Nurses' Organisations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organisations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting an *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Trained Nurses' Association of India has a membership of 1,192. The Association of superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and the Nursing Journal of India began to be published in February, 1910.

The Trained Nurses' Association of India was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (*a*) to uphold in every way the dignity and honour of the Nursing profession; (*b*) to promote a sense of *esprit de corps* among all nurses; (*c*) to enable members to take counsel together on matters affecting their profession; (*d*) to elevate nursing education; (*e*) to raise the standard of training; (*f*) to strive to bring about a more uniform system of education, examination and certification for trained nurses; and (*g*) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League, the Midwives' Union, the Nurses' Auxiliary of the Christian Medical Association, the Student Nurses' Association, and the National Council of Women in India. The combined membership of the Trained Nurses' Association of India, Health Visitors' League and Midwives' Union is 1,316 and the Student Nurses' Association comprises 29 units with over 999 members. The official organ of the Association is called "The Nursing Journal of India."

Patrons: H. E. The Marchioness of Linlithgow, Simla; H. E. The Hon'ble Lady Hope, Madras; H. E. Lady Lumley, Bombay and Her Highness the Maharani of Travancore.

President: Miss D. Chadwick, S.R.N., S.C.M., Government Hospital for Women and Children, Egmore, Madras.

Vice-Presidents: Miss A. Wilkinson, S.R.N., S.C.M., Matron, St. Stephen's Hospital, Delhi; Miss M. D. Winter, D.N. (Lond.), S.R.N., S.C.M., C.S.M.M.G. (on furlough); Lady Hardinge Hospital, New Delhi.

Secretary: Miss Diana Hartley, S.R.N., S.C.M., R.N. (Madras), R.M. (Madras), 15, Hall Road, Richards Town, Bangalore.

Hon. Treasurer: Mrs. E. A. Watts, Keswick Coonoor, Nilgiris, S. India.

THE WOMEN'S MOVEMENT.

The women's movement has had a remarkably smooth run in India. Imperceptibly but steadily, during the past ten or twenty years, the women of India have acquired numerous rights, social and legal no less than political. Their political enfranchisement has been achieved with considerable ease.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a scheme of reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** was granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness, and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election; similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 scores of women have become Municipal Councillors and members of Local Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seats in the Bombay

Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one women's deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above mentioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which, since its inception, women have voted and been delegates and speakers, and which, this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published, no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Reviewing the position about ten years later the Simon Commission showed the extremely limited extent to which women, enfranchised in the manner set out above, had become qualified as electors. Except in Burma, where it was comparatively high, the percentage of women electors to adult female population was less than one. In Madras it was one, in Bombay 8, in Bengal 3, in the United Provinces 4, in Bihar and Orissa 5 and in Assam 2—in Burma it was 4.6 per cent.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act, women became enfranchised. Other provinces followed suit, and at the time of the inquiry by the Simon Commission seven out of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers, first by nomination and then by election. And they justified the confidence placed in them by sponsoring and successfully carrying through many measures of uplift and reform in regard to the status and influence of women. They had so much proved their worth that the Simon Commission remark in their report: "The women's movement in India holds the key of progress, and the results it may achieve are incalculably great. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated citizens."

Basing their conclusion on these observations, the Simon Commission wished to bring about a substantial increase in the existing ratio of women to men voters. In exercising the option allowed to them of enfranchising women "on the same terms as men", the provincial legislatures did indeed make a significant gesture:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but so long as the qualification to vote was almost entirely based on property, it remained a gesture, because India's women do not own property in their own right.

The Simon Commission affirmed that a further step in developing women's suffrage in India should be taken immediately and added: "It may perhaps be found possible to add to the present qualifications two others, namely, (*i*) being the wife, over 25 years of age, of a man who has a property qualification to vote and (*ii*) being a widow over that age, whose husband at the time of his death was so qualified. In addition, the educational qualifications should apply to women over 21 as well as to men." The Simon Commission maintained that women's suffrage should be a cardinal point of the "franchise system" and suggested "qualifications for the vote which will not confine it to the few women who have property qualifications."

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights *vis-a-vis* men embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They have marched from reform to reform, and their outlook is for ever widening. The Gandhi movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political struggle from which they emerged fully conscious of their political rights and responsibilities. The part played by the two representatives of Indian womanhood at the India Round Table Conferences held in London brought them and their kind in the lime-light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 6 seats out of a total of 150 reserved for British India in the Federal Council of State and 9 out of a total of 250 so reserved in the Federal Assembly. In the Provincial Assemblies, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjab, 4 in Bihar, 3 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in some provinces. By means of such enfranchisement, it is estimated more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the Upper House in provinces where bicameral legislatives have been set up.

Indian women have hailed this as a welcome improvement in their political status and the elections that were held early in 1937 to the various Provincial Legislatures showed that they were alive to their responsibility under the new franchise. Women were very much in evidence at the polls, even in purdah-ridden provinces.

Such is the advance made in recent years and such is the widespread recognition of women's claims that women candidates have successfully contested general seats in ten cases, one in Madras, one in Bombay and eight in the United Provinces. The significance of these successes lies in the fact that the women defeated men in constituencies in which men voters predominate.

Both evidence and result of the awakening among Indian women are to be found in more than one legislative measure sponsored in the past year or two by women legislators calculated to confer greater rights and freedom on women.

The following table shows the percentage of women voters who exercised their franchise in the first general elections held under the 1935 constitution:

Provinces.	No. Enrolled.	Number who voted.	Per cent.
LOWER HOUSE.			
Madras	1,523,248	479,278	31.5
Bombay	305,750	129,535	42.4
Bengal	896,588	46,758	5.2
United Provinces	494,752	95,553	19.3
Punjab	173,459	58,216	33.56
Bihar	215,490	17,037	7.9
Central Provinces and Berar .	259,750	63,744	24.5
Assam	29,680	8,678	29.23
North-West Frontier Province	4,895	3,498	71.4
Orissa	70,526	4,670	6.62
Sind	27,940	9,705	34.7
UPPER HOUSE.			
Madras	2,578	1,420	55.1
Bombay	1,636	923	56.4
Bengal	2,136	437	20.5
United Provinces	1,684	598	35.5
Bihar	882	594	67.34
Assam	559	512	91.57

In many cases the percentages given above do not compare unfavourably with those of men voters. The voting for the Lower House in the Frontier and that for the Upper House in Assam are flattering to the women and shows what organisation can achieve.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights.

All-India Women's Conference.

In the past 15 years Indian women's rights grievances and demands have been voiced principally by the All-India Women's Conference.

This organisation, it may be noted, has latterly shown a tendency to transgress the requirements of sectional plea and strayed into wider political activity. It is not, however, difficult to explain this development. It has already been observed earlier in this chapter that the women's movement gained considerable impetus by the part played, and the status accorded to, women in the intensive political movement conducted by Mr. Gandhi and the Congress since 1920. This association, while it has undoubtedly brought women to the forefront of public activity, has also served to bring their outlook in line with that of the Congress. There are doubtless members of the fair sex who hold pronounced views on women's rights and yet do not share the extreme doctrines of Mr. Gandhi or the Congress, but it can safely be said that they are in a minority in the All-India Women's Conference. This will explain the somewhat pro-Congress political views expressed at the annual session of this body.

The last session of the Conference was particularly noteworthy in this behalf. For instance, it passed a resolution aligning itself with the doctrine of pacificism advocated by Mr. Gandhi. The year's president was Mrs. Rameshwari Nehru who is known to be a follower of Mr. Gandhi. In her presidential address she extended the sympathy of the women of India to their sisters in the West and the East now facing misfortune and to those small nations of the world losing their independence. Today, she said, they saw a new life pulsating through women, all thinking, planning and agitating for the removal of their wrongs. Comparatively backward classes of women had been similarly affected. The special contribution of the Conference to the women's movement was the definite shape and colour it had imparted to it. It had focussed public attention on women's problems.

In the social sphere, she said, the Conference had made a contribution towards the removal of evil customs and the obliteration of unjust laws. It had advocated radical changes in the personal laws, particularly of Hindus, and had demanded that the law with regard to inheritance, marriage, guardianship of children deal equitably with the rights of women.

Mrs. Nehru pleaded that untouchability must go, while the achievement of communal unity for India's national advance was as fundamental as the removal of untouchability.

The Conference adopted a comprehensive resolution on the war fashioned very much on Congress lines. The resolution expressed utmost distress at the continuance of war in various parts of the world, reaffirmed faith in non-violence as the best solution of the world's ill and appealed to the Government's of all nations to put aside weapons of destruction and seek peace in ways other than war. The resolution also exhorted women to throw in full weight their moral force on the side of permanent world peace. Such peace was impossible without a new order based on social justice and equality of all nations. The Conference therefore recognised that there could be no world peace until India and all other such nations attained their liberty the first logical step towards the attainment of the ideal for which Britain had declared she was at war. Removal of illiteracy by the introduction of free compulsory primary education for all boys and girls and promotion of communal unity were stressed by the Conference by another resolution.

Other resolutions related to the economic independence of women, cottage industries and the housing problem.

That Indian women do not favour headlong reform was evident by the attitude taken up by the Conference to two measures on the legislative anvil dealing with separation and divorce. These were held to be defective and the Conference considered it advisable that the question of legal separation and divorce be dealt with in two separate Bills and urged that the custody of children be left to the discretion of the courts, the mother being given preference ordinarily.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing-craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1930-31, the fisher-population on the West coast totalled 138,294. The esteemed table fish of the coast consist of the Seer (*Cybium* or *Scomberomorous*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Sciaenidae*), Whiting (*Sillago*), Thread-fins (*Polynemus*), Sardines (*Clupea*), and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*), Mackerel (*Scomber*), Catfish (*Arius*), Ribbon fish (*Trichiurus*), Goggles (*Caranx crumenopthalmus*) and Silver-bellies (*Leiognathus* and *Cazza*) take precedence of the former. Sardine and Mackerel overshadow all others. A master fisherman of experience was recruited from Scotland in 1936. He found it impossible to stand the climate of India and had to be repatriated in 1937. Since then efforts to revive deep sea fishing research begun by the trawler 'Lady Goschen' have been made. Proposals to charter a motor boat smaller than a trawler but capable of employing all known methods of sea fishing for bottom, mid-water and surface fish in order to test the suitability of those methods for Indian conditions, have reached an advanced stage. The type of vessel selected could not be chartered on account of the outbreak of war. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

The Madras Fisheries Service.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918, had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn developed into a separate Department of Government. It now forms part of the Department of Industries and Commerce.

They are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. The most noteworthy result of technological research conducted by the department is the production of sardine oil with vitamin A potency equal to one-fourth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that of Cod-liver oil and the discovery of several other Indian Sea fish which yield oils with a high vitamin A content. Oil from a South Indian shark-liver is ascertained to be about thirty-five times richer in Vitamin A than an average sample of medicinal Cod-liver oil. It has been established beyond doubt that Shark-liver oil in general is a most patent source of Vitamin A. As Cod-liver oil can no longer be imported in any quantity owing to the war, an opportunity is provided for developing an indigenous industry for the production of fish liver oil rich inVitamin A, and also for manufacturing malt extracts and emulsions and various preparations of this kind.

The educational work of the Department is becoming one of its most important branches in training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Laboratory Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bounded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present there are 105 fish curing yards scattered along the coast. During the year 1939-40, 1,372,816 maunds and 18 seers of fresh fish were brought to these yards for curing and 216,732 maunds and 23 seers of salt were issued for the purpose. The transactions in these yards resulted in a surplus revenue over expenditure of Rs. 46,266.

Pearl and Chank Fisheries.—While there is no prospect of a pearl fishery for some years to come, owing to the absence of spat fall in the banks, a distinct revival in the chank trade was evidenced in the keen competition for the purchase of the last two seasons' chanks. A total of 5,39,484 chanks were fished during the year 1939-40, which will fetch a gross revenue of Rs. 1,37,568. The rearing of Pearl oysters in captivity with the implied possibility of the production of cultural pearls near Krushadai Island, Pamban, started in 1933 has been successful. Another experiment in marking of chanks started in 1931 to study the rate of growth, mortality and migration of the chank in its natural haunt, is continuing and so far 3,700 chanks have been marked and liberated.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Mirror carp fingerlings have been introduced in a pond in the Nilgiris, from Nuwara Eliya, Ceylon. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 3 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and Etroplus which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. The Department has been endeavouring to establish Catla, the quick growing carp of great economic importance, into the Cauvery system since 1922, and direct proof of the success of the efforts of the department has been obtained by the capture of hundreds of young catla at almost all the anicuts and sluices in the Tanjore District. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvæ of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public. A total of 1,06,289 persons visited the Aquarium during 1939-40 and the receipts amounted to Rs. 9,666-2-0 against an expenditure of Rs. 6,840-0-3.

Deep Sea Fishing and Reearch.—The annual report of the Public Health Commissioner with the Government of India for 1933 states that the total land area of British India amounts to only 2.44 acre per head of the population but allowing for forests and uncultivated and fallow lands only 0.72 acre per head is under food-crop, quite insufficient for even the present population, and that the population is increasing at an alarming rate and by 1941 will probably reach 400 millions. The finding of the census of 1931 is that agriculture has reached its maximum production under present conditions. Fisheries therefore are the only prime source of food-supply to supplement agriculture, and the Department has been endeavouring to play its true and proper part in improving the catches and methods of sea-going fishermen to augment the fish supply of the Presidency.

The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

(1) what kinds and quantities of fish are available beyond 7 fathoms; and,

(2) how to exploit these deep-sea fisheries economically.

The survey of deep-sea fisheries by the trawler 'Lady Goschen' was abruptly terminated in 1931-32, as a measure of retrenchment. Brief though the survey was it disclosed the existence of important off-shore fisheries unsuspected before. The wealth of fish off Negapatam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realised that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off-shore fishing grounds by suitable craft and tackle must be shouldered by the Department. The Yorkshire Motor Coble was decided on as the most suitable modern fishing boat to supplant the local catamaran and canoe on a surf beaten harbourless coast, and one was acquired in 1930-31. In the years of depression however the financial stringency of Government precluded experiments and demonstration with the Coble. Further experiments are being planned.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds, which number over 106,050 in the Presidency. The work though begun in July 1930 lasted only for 13 months and had to be abruptly stopped as a measure of retrenchment. It was, however, possible to complete during this short period a survey of ponds in 98 villages; 2,172 wells and 264 ponds in these villages were examined. Though it has not been possible to give satisfactory help to the numerous enquirers for want of staff and funds, advice on matters regarding rearing of fish in ponds and wells is being given as far as possible. For a comprehensive and intensive research on the various problems relating to the occurrence, life history, breeding seasons suitability for stocking waters, their food, conditions of growth, and the physical and chemical characters of the water suited for each, their enemies and diseases, etc., a scheme for a fresh water biological station was drawn up and sanctioned by the Imperial Council of Agricultural Research in 1934, and is still awaiting allotment of funds.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1939-40 on the west coast was 54.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 2 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery station at Tanur. They are given practical instructions in fishing, a boat having been purchased for the purpose. But as a measure of economy the training Institute was closed in July 1937. In some places the villagers themselves started the schools and then handed them over to the Department. In other places schools were opened by the Department at the request of the fishermen. A comprehensive scheme for the establishment of a Fisheries Technological Institution has been drawn up and submitted to Government.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, odd swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstay of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Rajshahi, and Dacca Divisions. 490,865 persons in Bengal subsist by fishing with 272,579 maintained by the sale of fish. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla catla*), mrigal (*Cirrhina mrigala*); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti or betki (*Lates calcarifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the Mangoe-fish or Thread-fin or Indian Salmon (*Polynemus*) pomirets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organise and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organisation the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1923 after which fisheries in Bengal were adminstered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without much difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilisation of fish by-products. Fresh water Fisheries, however, are vast and very important and these require to be developed scientifically. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

During a lapse of 14 years after the closure of the Fisheries Department, the price of fish in Calcutta has been soaring high consequent on the rapidly increasing demand and the unhealthy monopoly exercised by the small group of vested interests. The economic condition of the actual fishermen was gradually becoming worse due to exploitation by the capitalists and the fisheries in general were getting depleted due to various causes at work. With the increase of distress the public naturally have been clamouring for the re-establishment of the Fisheries Department to protect the fisheries interests and to organise and develop the fishing industry on modern lines and to improve the general economic condition of the fisherfolk. The Bengal Government therefore decided to appoint a Fisheries Expert to survey the existing condition of the Fishing Industry in the Province and to suggest schemes of development with a view to augment the fish food supply, to examine the ways and means of bringing about a reduction in the ruling prices of fish, and to stimulate commercial enterprise in speedier transport, better marketing arrangements, the establishment of Cold Stores and Factories for fish by-products.

The services of Dr. M. Ramaswami Naidu from the Madras Fisheries Department who has had vast experience in fishery industry both in India

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and Europe, were requisitioned by the Bengal Government for appointment here as the Fisheries Expert. He surveyed the industry and submitted a report to Government, which has been considered. Government intend to organise a Department of Fisheries to develop all classes of fisheries, deep sea, estuarine, river and tank and as a first step towards the organisation of this department have provided Rs. 80,000 in the budget for 1941-42.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries, particularly those connected with the utilization of by-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a chance is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr. Sorley's more important recommendations are:—

1. The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.

2. The establishment of a bureau of fisheries information.

3. The advisability of the transfer of the fish curing yards to the control of the Local Government; and

4. The encouragement by the Bombay University of marine biological research.

Mr. Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started.—A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay, at Danda, and was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R. I. M.) and suitable alterations to it were to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been dossible aroused the interest of the fishermen,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen at Danda. That the progress of this experiment has been encouraging is evident from the fact that every year since then has seen an addition to the number of vessels. The following four vessels were built by Government:—

(1) The "Lady Sykes", (2) the "Sir Frederick Sykes", (3) the "Lady Brabourne" and (4) the "Lord Brabourne".

The last mentioned vessel was built at the Royal Indian Naval Dockyard and is a great improvement on her predecessors, both in point of design and engine equipment. The special feature of this vessel is its insulated fish hold and its comparatively large carrying capacity.

The launches have been operating between Bombay and the Kanara coast. The success which attended their working encouraged private individuals to invest in similar vessels to transport fish. The number of privately owned launches at present is nine. They transported during the fishing season of 1939-40 a total of 2,504,479 lbs. of fish.

Growth of Refrigerating Facilities.— Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malwan on the Ratnagiri coast, and Chendia on the Karwar coast. In Bombay, quick freezing plant employing the Z-process has been installed by a Russian technician at the Kermani market at DeLisle Road and an ice factory and a cold storage plant have been constructed on the east side of the Crawford market (Bombay). A feature of the last plant is that it has a number of small chambers which are hired out at small fees either to one individual or to several collectively. This plant also provides for the quick freezing of fish.

During the current year an ice factory and a quick freezing and storage plant were set up at Sassoon Dock (Bombay), where all the launches, both Government and private, land their catches. This factory and cold storage plant have met a longfelt want and proved an undoubted boon both to fishermen and owners of launches and sailing craft. It has obviated the heed of obtaining ice from remote centres in the city, thus saving a good deal of time and expenditure. The existence of the cold storage plant at the Dock is a welcome facility to the fishermen, who are now able to store catches at any hour of the day or night when retail vendors are not on the spot.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object of enabling them to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly, a fisheries information bureau has also been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not available to them before.

The war has led to an investigation of the possibilities of the manufacture of oil from shark livers to replace the dearth of supplies occasioned by the stoppage of imports of Cod-Liver Oil from Norway. The work is still in its preliminary stage but the results so far achieved give every indication for the establishment of a flourishing shark liver oil industry in this province. Tests of the oil, obtained from certain varieties of sharks, show that its "A" vitamin potency is about 70 times greater than that of Cod Liver Oil.

The control of the fish curing yards was transferred to the Department of Industries from July 1, 1936, prior to which these were administered by the Salt Department of the Government of India. There are 32 such yards, 18 in the Ratnagiri District and 14 in the Kanara District. At these yards duty-free salt is stored in salt *kothars* from where it is issued to fish curers for curing fish.

Since the transfer of the yards the Department of Industries is devoting special attention to effecting improvements in the methods of curing. Cement concrete platforms were constructed at the Karwar yard for curing fish. The fishermen have realised the advantages resulting from such platforms with the result that fishermen at other yards have approached this Department for similar platforms at their yards.

With a view to demonstrate improved methods of curing fish, the department also constructed model fish curing sheds at Malwan and Majali. Experienced master curers have specially been recruited to demonstrate improved methods to the fishermen.

The more important sea-fish are pomfrets, sole and sea-perches, among which are included the valuable Jew-fishes (*Sciæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are Bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

Inland Fisheries.—Government at the beginning of 1936 approved of a scheme for the development of inland fisheries in the Presidency. A start in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Bandra Municipality for the purposes of the experiment.

The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs. 10,000 for inland fisheries work.

In Sind considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormai, shark, rays and jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay City itself, will come as a surprise to many. The fisheries dot Bombay City seaface on its south-western and north-eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away, and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south-western site in Bombay City where pearl fisheries have been recently discovered is situated in blocks Nos. 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but the pearls, apart from being limited in numbers, are of indifferent quality.

The revenue derived from the various pearl fisheries is meagre. They are not leased out regularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster. They are confined to certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

There are two pearl fisheries in the Gulf of Cutch, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Nawanagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which, in 1905, obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territories in Kathiawar.

The Punjab.

District work activities consist mainly in patrolling rivers and streams, catching and prosecuting poachers and issuing fishing licenses. The number of fishing licenses issued during the year 1939-40 was 6,585, against 7,283 in the previous year.

The year 1939-40 was unfavourable from a fishing point of view. There was a general complaint of shortage of fish in the rivers and streams. Consequently the catches of fishermen were reported to be poor almost everywhere. The decrease in fish is said to be due to the following causes :—

1. Lack of rains during the last two or three years owing to which
   (*a*) Natural spawning was affected adversely, and
   (*b*) The rivers and streams being very low were cleared out of the whole stock in a short time.
2. Silting of some of the streams and conversion of others into seepage drains by the Canal Department.
3. Lack of facilities for the protection of the spawning grounds during the breeding season.
4. Construction of weirs at Canal Head Works which has obstructed the upstream run of fish to their spawning grounds.

There was no extraordinary mortality among fish in any river or stream in the Punjab.

165 Angling Licenses for trout fishing in Kulu were issued against 171 in the last year. The decrease is due to the curtailment of leave of military officers owing to the war. The catches of the anglers were on the whole satisfactory. The biggest trout fish caught with rod and line in the Beas Angling Reserve was 3 lbs. 4 oz. and the biggest brown trout netted in the Beas was 10 lbs.

The Brown trout ova planted in the past in the Baspa river has proved a success. The trout fish are increasing in number and are quite healthy. No angler fished this water during the year 1939-40. The number of fish in the Pabar

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

River is small. No anglers fished this water during the year.

Research.—As a result of the addition of research assistants, research on fresh water fishes has been commenced in a number of directions and the results achieved during the year 1939-40 are summarised below :—

A. *Trout Culture.*—The hatcheries at Mahili (Kulu) produced 123,948 fertile ova of brown trout as against 81,109 produced last year. Out of these 75,000 were planted in various streams in the Kulu and Kangra Valley and the remainder were hatched out at the hatcheries and the fry thereof planted in the river Beas and its tributaries in the Kulu Valley.

To improve the fisheries and stock the streams to their fullest capacity (with due regard to available food supplies), investigations of fundamental importance are under way at the hatcheries. For instance :

1. Qualitative and quantitative study of fish food available in the river Beas and its tributaries in the Kulu Valley ;
2. Study of food consumed by fish by examination of its stomach contents ;
3. Comparison of fertility of wild and domesticated trout ;
4. Study of diseases ; and
5. Study of insect *fauna* of locality which constitute the principal food of trout.

B. *Carp Farming : Spawning.*—Scarcity of rains and foods were mainly responsible for failure of spawning of carp at most of the natural spawning grounds. Consequently there was a general complaint of scarcity of fish in most of the districts.

In the laboratory, ripe females of Morakha (*Cirrhina Mrigala*) yielded eggs easily on injections with sex hormones such as Antiturin S. Prolan, but when mixed with male milt the eggs did not fertilise for reasons which still remain to be investigated.

Stocking.—The tanks at Batala and Madhopur were stocked with carp fry to study economics of carp farming.

C. *Gold Fish as Cottage Industry.*—By cross breeding a variety of gold fish has been produced which does not grow more than 3 inches in length and successfully breeds in the aquaria. The fish become ripe in their second year and spawn from February to May. The fish find a ready market and can easily be disposed of.

D. *Larvicidal fish.*—Field studies to determine the capacity of these fish to destroy mosquito larvæ showed that *Colisa* (*Trichogaster*) *Fasciata* mostly consumed mosquito larvæ. *Ambassis* had eaten *Chirnomous* larvæ in addition to mosquito larvæ, while *Barbus Stigma*, though a voracious feeder of mosquito larvæ in the laboratory, had fed mostly on decayed vegetation and mud.

These fish spawned successfully at the Chhenawan Fish Farm and were supplied to anti-malaria officers of various districts in the Province.

Travancore.

The Department of Fisheries of the State which was originally part of the Department of Agriculture, was separated and affiliated to the University of Travancore, and is now under the control of the Professor of Marine Biology and Fisheries who co-ordinate research and administration. The Professor is assisted by two senior officers, one of them trained in Japan and America and the other at Liverpool.

The coast line of Travancore is 172 miles long and is margined by a shallow water area, within the 100 fathom line, of nearly 3900 square miles. Though out of this vast-expanse of fishable waters, only the fringe within a distance of 5-7 miles is exploited at present the Marine fisheries of Travancore is worth about Rs. 1,20,00,000 per annum. The surf swept coast is singularly deficient in harbours and during the monsoon months the fury of the breakers is a source of great hindrance to fishing. From Cape Comorin to Trivandrum the unsinkable catamarans composed of logs tied side by side is the only possible easy going fishing craft. From Quilon to the northern most boundary of the State small country made canoes are used and from October to June, when weather conditions are favourable seine nets are extensively employed.

The esteemed table fish of the coast consists of pomfrets, seer fish, several species of horse-mackerel, tunny, Jen fish, whiting mackerel and thread fins. In economic importance however, shoal fish and fish of inferior quality such as butter-fish, sardines, white bait and ribbon fish take precedence. Butter-fish, sardines and prawns are abundant in the northern half of the coast, white cat-fish, white bait and ribbon-fish are predominant in the southern half. This conspicuous difference in the distribution of shoal fish has been found to be mainly due to the differences in the nature of the sea bottom. During favourable seasons, butter fish, white bait, ribbon-fish and cat-fish are so greatly in excess of the local food requirements that large quantities are salted and dried both for inland consumption and for export. Travancore exports annually about Rs. 23,00,000 worth of salted fish, the greater part of which is sold in the adjoining tamil districts, and Ceylon.

As the important shoal fish are seasonal in their appearance certain months are more favourable for fishing than others. During these favourable seasons large catches are landed daily along the coast and the only method of conservation of the large unsaleable surplus is salting and drying. But realizing that salted fish is devoid of some of the essential properties of fresh fish, the Government opened a refrigerating plant in the metropolis for the preservations and storage of fresh fish. In the meantime the department also perfected a cheap and efficient method of packing frozen fish, which enables the fish to remain unspoiled for over 72 hours

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

With the help of this method large quantities of frozen fish are now exported to Bangalore and other important inland towns in South India.

Among Marine products Shark Liver Oil, Turtle Oil and the Liver Oil of Leather Jackets are extracted in considerable quantities and recently the department undertook the manufacture of Shark Liver Oil under a patented name 'Shaliverol'; which is finding an excellent market as a substitute for Cod Liver Oil. The possibilities of finding a market for turtle oil, which is rich in skin vitamins, is now under investigation. Terpang, out of which the Chinese prepare a kind of soup is also found abundantly along the coast. Sargasso weed, which is one of the sources of iodine is also being investigated for the commercial extraction of iodine.

The lake fisheries constitute an important section of the industry. A chain of interconnected lakes extends from the borders of Cochin to Trivandrum. The largest of them is about 30 miles long and ten miles across, at its broadest part. Their greatest advantage is due to their proximity to the sea and their temporary or permanent communication with the sea, which bring them under tidal influence. Certain varieties of fish and prawns migrate into these lakes periodically either in search of some special type of food or suitable spawning grounds. The most important of these migratory forms is prawn, the annual catch of which is estimated at Rs. 25,00,000 out of which about Rs. 15,00,000 worth of dried prawn pulp is exported to Burma and Singapore. Next in importance is mullet fishing, but owing to its highly perishable nature the entire catch is sold in local markets. Besides these two types, large catches of inferior and miscellaneous varieties supply local markets with cheap fish all the year round.

The shell fish industry of the lakes is now confined mainly to the collection of lime shells from certain regions of two of the major lakes. These supply all the lime required for building purposes in the State and recently a scheme has been drawn up exploiting these extensive resources for the manufacture of cement.

Large beds of edible oysters are also found in three of the lakes. At present these are not very popular as an article of food. However, investigations are under progress for culturing them on the same principles as those followed in Europe and for finding out markets for liver oysters outside the State.

While in the rest of India inland fisheries are very unfavourable since many of the rivers and tanks dry up in summer, in Travancore fresh water fisheries are a source of perennial fish supply, and some of the fresh water fish find preference to sea fish. There are about 120 varieties of fresh water fish some of which grow to very large size.

Research Activities.—A combined aquarium and marine Biological laboratory was recently completed under the auspices of the University of Travancore. The Aquarium which is one of the largest in Asia is open to the public and the Laboratory, in addition to training students for post-graduate research degrees will also function as a bureau of fisheries with the following objects;

1. Propagation of useful food fishes and their distribution to suitable waters.
2. Investigations relating to fish culture fish diseases, conservation of fishery resources and development of commercial fisheries.
3. Study of methods of fishing, fishery industries, and utilization of Marine products.
4. Dissemination of knowledge regarding fishery science among those engaged in the industry.

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adapations of them to Indian law and procedure, and some material modifications of them in their applications, translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but, whether or not our early administrators realised the importance of the forests to the economic and physical welfare of the whole country, the fact remains that little or nothing was done to check uncontrolled destruction with its inevitable results in erosion and sterilisation of the fertility of the land. The years between 1850 and 1857 witnessed the first beginnings of forest conservancy in Southern India. During the preceding twenty years far-sighted individuals had repeatedly urged, both in Madras and Bombay, that scientific advice in the management of the forests had become an urgent necessity. In 1847 the Bombay Government appointed Dr. Gibson as Conservator of Forests for the Presidency. Madras did not follow this example until nine years later, when Dr. Cleghorn was appointed Conservator of Forests in 1856. It was a Memorandum of the Government of India issued in 1855, arising as it chanced out of the annexation of the Province of Pegu in Burma which first laid down the outline of a permanent policy for forest conservancy in India. Progress was delayed for a time by the disturbed state of the country, but from 1860 onwards forest organisation was rapidly extended, though the earlier years of forest administration were full of difficulties. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of organised management, were long and laborious tasks, which are even yet not completed. Nevertheless, large tracts of forest were saved from ruin and were gradually brought under increasingly efficient management. It was in 1862 that the Governor-General in Council submitted to the Secretary of State detailed proposals for the administration of forests as a public estate for the welfare of the country as a whole. "The idea that forest is a thing valuable in itself, and, in truth, just as essential to the community as fields of wheat, sugar, or cotton, took a long time to spring up, and, in fact, is not even now generally realised in that complete manner that is essential before forest management can be said to stand on a proper basis." With the appointment of Brandis (later Sir Dietrich Brandis) as the first Inspector-General of Forests in 1863 commenced the scientific management of India's forest estate. Whatever may have been the opinions held in the past in some quarters regarding restrictions imposed by forest policy, there can now no longer be any doubt regarding the very substantial benefits which have accrued to the country through the formation of an extensive forest estate and that in her forests India now possesses a property of great value, the future importance of which it is hardly possible to over-estimate.

Types of Forest.—More than one tenth of the total area of British India is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India under the control of the Forest Department on 31st March, 1940, was 98,721 square miles or 11·5 of the total area. This was classed as follows: Reserved 72,793; Protected 6,699; Unclassed State 19,229.

Throughout this vast forest area, scattered over the length and breadth of India, from the Himalayan snows to Cape Comorin, and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of India, including the Indo-Gangetic plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and, in the north, alpine zones must be distinguished, each supporting its own forest types. Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical, temperate and alpine, there can be distinguished wet, moist and dry forest types. In addition, various edaphic and seral types occur, dependent on local conditions, such as littoral (beach), tidal, fresh-water swamp, and riverain forests.

The following is a brief description of the main forest types:—

I.—TROPICAL FORESTS.

1. Tropical Wet Evergreen Forests.—These are dense forests, with a large number of tree species all mixed together, but according to their heights forming several canopies or layers. The upper canopy trees, among which *Dipterocarps* are usually characteristic, are often 150 to 200 feet high, and they very often have clear stems of 100 feet before the first branch is reached. These forests are found in the areas with the heaviest rainfall. In the southern or Peninsular region, they occur along the Western Ghats from a little south of Bombay to Tinnevelly, *i.e.*, in the western parts of Bombay, Madras, Coorg, Mysore, Cochin and Travancore. In the northern or Indo-Gangetic region, the type is to be found in the wetter parts of Bengal (the submontane and Chittagong areas), extending into the damper parts of the coastal strip of Orissa, and intermingled with the next two types over almost the whole of Assam. The type also occurs extensively in North Burma and the Andamans.

2. Tropical Semi-Evergreen Forests.—These form an intermediate type between the wet and the moist types. They are very extensive in Burma, and are fairly widely distri-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

buted in the Northern region of India, occurring all over Upper Assam and in North and South Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the South, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species, such as the *Terminalias*, and the general height is somewhat less than in the wet evergreen forests.

3. Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Terminalias* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through Bengal and Assam, Bihar and Orissa, and the United Provinces up to the eastern border of the Punjab.

4. Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula, in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic plain, from Orissa, through Bihar and the United Provinces to the Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is typically mixed, with *Sal* occurring only locally.

5. Tropical Thorn Forest.—The dry tract throughout the Peninsula, to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas of actual desert), from the North-West Frontier Province, through the Punjab and Rajputana, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6. Tropical Dry Evergreen Forest.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, but is largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops hexandra* and *Memecylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS.

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 5,500 feet, has a dense evergreen forest of medium height (60 feet) in which *Eugenia* is a characteristic genus, with *Lauraceæ* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Ternstrœmia*, *Eugenia* and *Meliosma* are typical genera.

III.—NORTHERN SUBTROPICAL FORESTS.

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Pines* are typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2. Subtropical Moist Hill Forests.—These extend the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Bhutan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chil* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees mix with or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur and Upper Burma hills, but instead of the *Chir* the dominant tree is the *Khasi pine* (*Pinus khasya*). This again is replaced by *Pinus merkusii* on the hills in the South Shan States and parts of Lower Burma.

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olive* (*Olea cuspidata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kala Chitta hills in Punjab, Kashmir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS.

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through Bengal into the higher hills of Assam and Burma, from about 6,000 feet

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to 9,500 feet. They are typically fairly dense evergreen forests, in which several species of *Oaks* and *Chestnuts* predominate, but many other species are also present, including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2. Moist Temperate Forests.—Along the whole length of the Himalayas from the North West Frontier Province, through Kashmir, Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees are *Spruce*, *Silver Fir*, *Cedar* (*Deodar*), *Blue Pine* (*Pinus excelsa*), and *Tsuga*. *Cypress* and *Yew* also occur to a less extent. Often these trees are mixed together, but pure crops of one or the other are almost more frequent, depending on the altitude, aspect and other conditions. Evergreen *Oaks* are also often present, particularly on southern aspects, while in the damper situations are often many broad leaved trees, also typical of European forests, such as *Maples*, *Hornbeam*, *Horse Chestnut*, *Birch*, *Elm*, etc.

3. Dry Temperate Forests.—In the inner ranges of the Himalayas, where the South-West monsoon is feeble, and the rainfall is usually less than 40 inches a year, and that is mostly in the form of winter snow, is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers *Cedar* (*Deodar*), *Pinus gerardiana* and *Juniper* (*J. macropoda*), with some *Silver Fir* and *Blue Pine* at higher elevations. Broad leaved trees, such as *Maple*, *Ash* and the *Holm Oak*, occur scattered or in pure patches, while the *Olive* spreads up from the dry subtropical zone. The type occurs in Hazara, Kashmir, Chamba, Inner Garhwal and Sikkim. Among the herbs and shrubs present are many medicinal plants, such as *Artemisia* and *Ephedra*.

V.—ALPINE FORESTS.

The uppermost forests of the Himalayas, from about 9,500 to 12,000 feet, consist of a dense growth of small trees and large shrubs, chiefly *Birch*, *Rhododendron* and dwarf *Juniper* with patches of coniferous overwood of high level *Silver Fir*, and *Blue Pine*.

This gives place to an alpine scrub above, consisting of dwarf *Rhododendrons*, *Junipers* and other shrubs, interspersed with patches of grassland, which form excellent grazing areas in summer, when they are covered with a great variety of beautiful alpine flowers.

VI.—SPECIAL FOREST TYPES.

Among various special edaphic and seral forest types, the following may be mentioned :—

1. Beach Forests.—All round the coast, wherever a fair width of sandy beach occurs, there is a fringe of forest in which *Casuarina*, originally introduced from Australia, is now often the most characteristic species. Elsewhere, small evergreen and deciduous trees form a low but fairly dense fringe along the shore.

2. Tidal Forests.—In the Sunderbans of the Ganges-Brahmaputra delta, and along the mouths of other large rivers, such as the Mahadi, Godaveri and Indus, are to be found *Mangrove* (*Rhizophera*, *Brouguiera*, etc.) and *Sundri* (*Heritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. Fresh-water Swamp Forests.—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river beds, in parts of Assam, Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4. Riverain Forests.—Along all the larger rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstræmia flos-regina*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in North and South India, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Acacia catechu*), *Sissoo* (*Dalbergia sissu*) and *Tamarix* forests found throughout Northern India from Assam to Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS.

No account of the forests of India would be complete without a reference to the *Bamboos*, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi-evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forests and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos, which are not at present economically exploitable and which often greatly hinder other forest operation.

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely :—

(*a*) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(*b*) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Central and Southern India, the sal forests of Northern, Central and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*c*) Minor Forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(*d*) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Burma was separated from India and Forests were included in the schedule of Provincial subjects throughout India.

Territorial Charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; usually provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Sub-divisions. The Ranges are further sub-divided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards.

Non-Territorial Charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans.

The Forest Service.—The Forest Service comprises four branches:—

(1) The Indian Forest Service. This still contains 180 officers. Of these 161 were recruited direct to the service. Recruitment to this service ceased in 1932.

(2) The Indian Forest Engineering Service.—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The present number of officers in the Indian Forest Engineering Service is only 2, one in the Punjab and the other in Bombay.

(3) The Provincial Forest Service.—Till 1928, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forests Service was started at Dehra Dun, in 1926, the training of the Provincial Forest Service officers was stopped in 1928.

With the advent of Provincial autonomy in 1935 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course.

(4) The Subordinate Forest Service.—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards.

With the closing down of the Coimbatore College in 1939, the training of Forest Rangers is now concentrated at the Indian Forest Rangers College at Dehra Dun for the whole of India, except Bombay, the latter province making its own arrangements.

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes.

Forest Education.—Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. The school owed its origin to a memorandum submitted in September, 1877, by Sir Dietrich Brandis, the first Inspector-General of Forests to the Government of India, in which he urged the desirability of creating a national Forest School in India, with the object of preparing students for the executive charge of a range, and of enabling Forest Rangers to qualify for promotion to the superior staff. Forestry, he said, must cease to be a subject of foreign introduction: it must become naturalised before it could be regarded as established on a safe and permanent basis.

The hopes of Sir Dietrich have today been more than realised, for not only is the executive charge of ranges and even divisions now being held by ranger students of Dehra Dun or of the daughter college at Coimbatore, but with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forest Services of the various Provinces and States of India.

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College has now been closed, however, with effect from the 1st July 1939, and Ranger

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

students from all parts of India are again being trained at Dehra Dun. This College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

In 1912 a separate course was started for the Provincial Forest Services as then constituted. This course was closed in 1928 with the cessation of direct recruitment to the old Provincial Forest Services. From 1st November, 1926, the training of Indian probationers for the Indian Forest Service was commenced, a separate Indian Forest Service College being established in the old Forest Research Institute at Chandbagh, Dehra Dun. This College, however, had to be closed in November, 1932, owing to the cessation of recruitment to the Indian Forest Service.

Following the transfer of "Forests" to popular control, under the reformed constitution, the old Indian Forest Service is slowly disappearing, and in its place each province is building up its own Superior Forest Service. For the training of officers for these new Provincial Forest Services, and for the corresponding Forest Services of the Indian States, the *Indian Forest College* was established at New Forest in conjunction with the Forest Research Institute and was opened in May, 1938.

The Indian Forest College.—The Indian Forest College is housed in the Forest Research Institute building at New Forest and is well equipped with lecture and common rooms, and biological and chemical laboratories. The museums, herbarium laboratories and workshops and the Central Library of the Forest Research Institute form an important part of the College, in so far as they are largely used for educational purposes by the Research Officers and College Staff. Hostel accommodation is provided in Class II Officers' bungalows and there is a common mess. A large playing field with a pavillion provides football and hockey grounds, a cricket pitch and tennis courts.

The staff of the College consists nominally of two—the Principal and Professor of Forestry, and the Lecturer in Engineering and Surveying, under the general administrative control of the President, Forest Research Institute and Colleges. But in addition the Research Officers of all the branches of the Forest Research Institute act as lecturers in their respective subjects.

The course covers two years, and among other conditions: "An honours degree, not lower than second class, in science or mathematics or agriculture, or its equivalent, is required as a qualification for entry, and the combination of botany and mathematics is preferred." The fees are Rs. 3,500 per year, and the total cost, including stipend for living expenses, cost of camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 10,500 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

The Indian Forest Ranger College.—The Indian Forest Ranger College (formerly known as the Forest School, and then as the Imperial Forest College) is housed in the original College buildings at Dehra Dun. These comprise a college building, with lecture and common rooms, drawing and engineering halls, biological laboratory and museum, and hostels for the students. The surrounding grounds, covering about 4 acres, constitute a small arboretum and include tennis courts, while there is a good playing field adjacent.

The staff of the College consists at present of the Director and the Assistant Instructor. Certain of the Research Officers of the Forest Research Institute also lecture in their special subjects.

The course covers two years. Among other conditions, the minimum qualification for admission to the College is: A certificate of having passed the Intermediate Examination of any recognised Indian university with one or more of the following subjects:—Mathematics, Physics, Chemistry, Botany, Zoology. A certificate of having passed any other examinations of an equivalent or higher standard will be admissible. The fees are Rs. 1,500 per year, and the total cost, including stipend for living expenses, camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 4,850 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

Research.—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of Forest Research in 1906, when at the instance of Sir Sainthill Eardley-Wilmont, then Inspector-General of Forests, a staff was appointed to investigate problems connected both with the growing of forests and with the utilisation of forest produce.

In 1914 the first Forest Research Institute was opened on the Chandbagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kaulagarh (New Forest) estate a few miles out of Dehra Dun, and it was opened on the 7th November, 1929. The old Institute was converted into the Indian Forest Service College, but with the closing of that college in 1932, the whole of the Chandbagh estate was given up, and with many additions and modifications now forms the Doon School.

The Forest Research Institute is under the administrative control of the Inspector-General of Forests, who is also the President. There are five main branches of forest research, namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry. Silviculture, which deals with all the production side of forestry is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work, does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India and Burma. The Botanical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

branch is chiefly concerned with the identification of species, but has a mycological section dealing with fungus diseases of trees and wood rotting fungi. The Utilisation branch has sections dealing respectively with timber testing, wood working, wood preservation, timber seasoning, paper making, wood technology and minor forest products. The sections are under the charge of specially trained Indian assistants and are equipped with up-to-date workshops, testing machines, seasoning kilns, antiseptic treatment plant, sawmill and a paper-making plant sufficiently large to enable paper-making tests to be carried out on a commercial scale. The Forest Entomologist is primarily concerned with research into the control of insect attacks in tree crops, and insect damage to timber. There is also a section dealing with the taxonomy of Indian insects under the Systematic Entomologist. The Chemist does research work into drugs, oils, and other minor forest products, and there is also a Soil Chemist who is engaged on silvicultural problems.

The Forest Research Institute is thus organised and equipped to deal with every aspect of Forest Research and the work it has done in the past and is doing has gone a long way towards improving the productivity of the forests of India, and had led to the fuller and better utilisation of their products, with correspondingly increased financial returns. Limited facilities also exist at the Forest Research Institute for training in research methods and for the conduct of research by private individuals.

Forests Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 294 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilising modern American methods, to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light tramways, the trains of trucks being drawn by elephants which have been superannuated from ordinary work, and it has been found possible in this way to work large, hitherto inaccessible areas of forest very cheaply. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the late world-wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs. 299 lakhs a year, surplus revenue amounting to upwards of 26 per cent. of gross revenue. Most of the provinces ordinarily show a steady increase of surplus. Figures of Revenue, Expenditure and Surplus for the years 1939-40 are as following:—

Revenue.	Expenditure.	Surplus.
30,202,818.	22,744,245.	74,58,573.

Agencies.—The general practice of the Forest Department in the Government of India and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U.P.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the new company now known as Cables and Wireless Ltd. The Indian Radio Telegraph Company has taken over the working of the cables at Bombay and Madras, and is now known as the Indian Radio and Cable Communications Company Ltd. The same Company also works a direct wireless service between Bombay and Tokio, which was opened in 1933.

The inland wireless stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. The wireless installations at Karachi and Calcutta have been modified so as to meet all the wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes have been erected at many places for the purpose of providing constant communication with aircraft in flight, the most up-to-date system having been installed.

The Indian coast stations have been maintained in a state of high efficiency and many improvements effected. The high-speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) have proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

In December 1936 a radio-telephone service was opened between Madras and Rangoon, by means of which telephonic communication can be obtained between all places in India connected to the trunk telephone system and many places in Burma. This service involved the construction of a large amount of new and up-to-date apparatus both at Madras and at Rangoon.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and total many thousands per annum. Telegrams are also passed by wireless between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea.—A noticeable feature of wireless development during recent years has been the provision of direction-finding apparatus at Bombay, Calcutta and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain knowledge of their whereabouts at a considerable distance from the coast. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with civil aviation has been developed especially for the assistance of aeroplanes along the airmail routes between Karachi and Singapore and between Karachi and Madras.

Radio-Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Radio and Cable Communications Company between India and the United Kingdom and India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, until it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there was a gradual extension of the area covered in India, and every important city in India can be placed in telephonic communication with England and the rest of the world.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner can use the service for an overseas call. Before doing so, however, he has to place a deposit with the Telegraph Authorities.

Liberal allowance is made at the discretion of the observing operator for periods during which speech is unsatisfactory owing to any defect in service, so that the time charged for is the period of effective speech only. (Allowance is made in charging for calls when atmospheric conditions prevent continuous effective conversation.)

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, and Madras, and although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a Government contribution based upon the revenue from licence fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each, an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

All India Radio.—The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India. Government for this purpose formed an Indian State Broadcasting Service, now called All India Radio, and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee had as its chairman the Member of the Viceroy's Executive Council in charge of the subject.

Government, availing themselves of an improvement in their financial condition, in 1934-35 decided upon a large development of their broadcasting service and allocated substantial funds for the purpose. A special inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a 20 k.w. medium-wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wavelength is 338·6 metres (886 kc/s). The wavelength was somewhat inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of medium-wave for transmissions in India. It was therefore appropriated for the first 20 k.w. station to be built. The Bombay wavelength has since been changed.

The Government of India decided to appoint a Controller of Broadcasting in India and secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in August 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government, in announcing their determination to open a large broadcasting station in Delhi, intimated that they proposed to follow this by the installation of modern transmission equipments in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which followed the arrival of Mr. Fielden led to a revision of these plans, and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of Mr. H. L. Kirke.

A valuable report was presented by this official, and a plan for wide extension of broadcasting activities was elaborated. Government engaged Mr. C. W. Goyder, one of the foremost wireless, and particularly short-wave, engineering experts in the world, to be their principal engineer for construction and research work. Orders for extensive new equipment for implementing plans for expansion prepared by these experts were placed in January 1937. It included new 10 k.w. short-wave transmitters for Bombay and Calcutta and one 10 k.w. and one 5 k.w. short-wave transmitters for broadcasting and experimental work in Delhi. It also included a 10 k.w. short-wave transmitter for Madras, for service throughout the Madras Presidency, and a 250 watt medium-wave transmitter for Madras City. All this apparatus is of the most modern type. This makes for economy in working and gives purity of rendering unexcelled in any other country. The short-wave plant is considered of great importance, as it provides a measure of service for the whole of India. The medium-wave transmitters are intended to give a first-grade service on inexpensive receivers in the large towns, but owing to atmospheric conditions in India during the greater part of the year cannot be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

expected to provide a first-grade service at distances more than 30 to 50 miles from the special areas for which they are intended.

His Excellency the Marquess of Linlithgow, immediately after taking the oath of office as Viceroy in New Delhi on 18th April 1936, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable innovation in procedure was regarded as indicating His Excellency's enthusiasm for broadcasting and to portend the interest he has shown in its development.

Licences.—Broadcast receiver licences are issued at all head and sub post offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, a considerable number have been issued. The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during the past year.

BROADCASTING IN INDIA.

Headquarters of All India Radio: No. 5, Sikandra Road, New Delhi.

Telegraphic address: "CONBROCAST."

Broadcasting in India is controlled by All India Radio, which is a department of the Government of India. The head of this department is the Controller of Broadcasting, who is assisted at headquarters by the Deputy Controller, the Chief Engineer, the Administrative Officer, the Assistant Chief Engineer, the Public Relations Officer and the Director of Programme Planning.

There are 9 stations and 15 transmitters at present in operation in India. 7 receiving centres are also in operation at the present moment at Bombay, Delhi, Calcutta, Madras, Trichy, Dacca, and Peshawar. Two more are under construction.

Each station is under the control of a Station Director, who exercises supervision in respect of the programme, technical (through the Station Engineer) and clerical staff under him. Other heads of offices are: (*i*) News Editor, All-India Radio, (*ii*) Editor, "The Indian Listener," "Awaz" and "Sarang," (*iii*) Research Engineer and (*iv*) Installation Engineer. The total strength of All-India Radio as on the 1st April, 1941, was as follows:—

	Headquarters	Other Offices.
Officers ..	9	274
Staff ..	59	273
Total ..	68	547

Programmes.—Programmes, both European and Indian, are planned by Station Directors with the assistance of their Directors of Programmes and Programme Assistants. These are drawn up well in advance of their scheduled dates, and are published in the fortnightly journals of All India Radio.

Twenty-eight News Bulletins a day in English and Indian languages are broadcast for the benefit of listeners at fixed times of the day from the Central News Organisation at Delhi. All India Radio has also undertaken schemes of rural broadcasting for the uplift of villagers at all its stations except Bombay, where the scheme has been suspended, and School Broadcasting at the Delhi, Bombay, Calcutta and Madras stations. Public utility items include broadcast of S.O.S. messages for the tracing of lost persons.

Each station of All India Radio generally has the following types of studios for the broadcasting of different kinds of programmes:—English music, Indian music, Talks, News, Drama, Gramophone records and Feature programmes.

Public Relations.—Contact between All India Radio and its listeners is established through the medium of

(*i*) Periodical questionnaires issued from its stations to elicit reactions and tastes of listeners.

(*ii*) Advisory Committees established at Delhi, Bombay, Calcutta, Madras, Lahore, Lucknow and Trichinopoly in consultation with the Provincial Governments to keep the Controller in touch with local public opinion in the matter of programme construction and advise him on such matters.

(*iii*) The five Radio Journals of All India Radio, *viz.* The Indian Listener (English), Awaz (Urdu), Sarang (Hindi), Betar Jagat (Bengali) and Vanoli (Tamil).

(*iv*) Correspondence with listeners from whom both appreciations and criticisms are received.

Growth of Broadcasting.—The working of the Department resulted in a net profit of Rs. 27,65,966 with effect from the year 1930-31 to 1939-40.

Upto the 31st March 1940 Rs.31,03,200 have been spent out of the total allotment of Rs. 40 lakhs on capital programme.

The growth of Broadcast receiver licences at the end of March of each year beginning with 1933 is given below which will indicate the interest evinced in radio:

Year	Licences.
1933	9,275
1934	12,037
1935	17,881
1936	28,066
1937	42,152
1938	52,883
1939	72,282
1940	97,537

Licences in force at the end of Jan. 1941, 1,21,584.

Licences are issued on behalf of the Director General, Posts and Telegraphs, New Delhi, by all head and sub post offices, numbering 4,654 all over India.

Indian States are taking up actively the installation of radio stations. Hyderabad State has one in operation, while Travancore, Mysore and Baroda are expected to have stations in operation in the near future.

Number of Receivers.—While the number of wireless receivers in India has increased, the total for All India of 1,21,534 at the end of January 1941 is negligible, when one considers the vast population, about 380,000,000, and when one compares it with the progress in Europe, America or Japan where it has become an indispensable dynamic social institution.

Taking the figures of wireless licences, there was an increase of 11,000 between January 1933, and July 1935. The number in April 1937 was 43,351, in April 1938, 53,810, in April 1939, 73,698 and in April 1940, 100,388. At the end of 1940 there were 30,058 licence holders in Bombay Presidency, which has the largest number in India.

Radio Imports.—The imports of wireless apparatus into India has increased rapidly in recent years. Imports have increased in value from Rs. 10 lakhs in 1932-33 to Rs. 35 lakhs in 1936-37. The value for 1937-38 was Rs. 47·7 lakhs, in 1938-39, 41 lakhs while in 1939-40 it rose to 59·8 lakhs. For the ten months, 1st April 1940 to 31st January 1941, the value of imports was Rs. 38·6 lakhs, as compared with Rs. 40·5 and Rs. 30·02 for the corresponding ten months of 1939-40 and 1938-39. Most of the imports are through Bombay.

A feature of the import statistics is the growth of importations from the United Kingdom, which now heads the list of countries supplying wireless apparatus to India. The United States come second and the Netherlands third.

During the year 1934-35, imports from the United Kingdom fell by over a lakh from Rs. 5,71,971 to 4,66,316 while those from the United States of America increased by 6½ lakhs from Rs. 1,78,944 to 8,30,348. In 1937-38 imports from the United Kingdom increased to Rs. 15,54,884 and in 1938-39 to Rs. 16,87,726. Imports from the U. S. A. in 1937-38 amounted to Rs. 15,36,217 and in 1938-39 to Rs. 12,63,017. In 1939-40 imports from the U. K. were valued at Rs. 17,35,318 whereas from the U. S. A. at Rs. 15,95,349. For the ten months, 1st April 1940 to 31st January 1941, total imports from the United Kingdom were of the value of Rs. 18,70,668 and from the U.S.A. Rs. 15,03,336.

Below are given tables showing the value of the radio import trade, the value of imports into Bombay and the share of principal countries.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Anglo-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe, who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette* founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :—

1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (*a*) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (*b*) any person registering under the Press and Registration of Books Act should be a major to defined by the Indian Majority Act ; (*c*) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts ; (*e*) any person challenging the orders of Government should do so in the local High Court ; (*f*) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months ; (*g*) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

The Indian and Eastern Newspaper Society.—An important development in connection with newspapers in India took place in 1939, when the Indian and Eastern Newspaper Society was formed. The Society's principal objects are as follows :—(*a*) To act as a central organisation of the Press of India, Burma and Ceylon ; (*b*) To promote and safeguard the business interests of members as affected by the action of Legislatures, Governments, the Law Courts, municipal and local bodies and associations or organisations commercial or formed for any other purpose ; (*c*) To collect information upon all topics having a practical interest for members and to communicate the same to them; (*d*) To promote co-operation in all matters affecting the common interests of members ; (*e*) To hold periodical conferences of its members to discuss and determine action on matters of common interest ; (*f*) To make rules to govern the conduct of its members in specified matters, to provide penalties for the infringement thereof, and to provide means of determining whether there has been such infringement; (*g*) To maintain a permanent secretariat in India which should watch over the interests of members and should permit of a constant interchange of information and views ; (*h*) To do all such other things as may be conducive or incidental to the attainment of the aforesaid objects.

Editors' Conference.—During 1940 a Conference of Editors was called by Mr. K. Srinivasan of *The Hindu* to consider the Government of India's restrictions on the Press under the Defence of India Act in connection with the Congress satyagraha movement. The Conference was held at Delhi and formed itself into a body representing the Editors of Indian newspapers. As a result of its representations the Government of India decided to withdraw the restrictions on the Press under the Defence of India Act and to set up in each province a Press Advisory Committee which Provincial Press Advisers should consult in connection with articles about which there was doubt. A Committee was also set up at Delhi to act in conjunction with the Chief Press Adviser. These Committees are intended to act as a sort of liaison between the Press and Government, and are appointed with the sanction of both Government and the President of the Editors' Conference.

The All-India Newspaper Editors' Conference subsequently adopted a constitution with the following aims and objects :—(*a*) To preserve the high traditions and standards of journalism. (*b*) To serve and safeguard the interests of the press in regard to the publication of news and fair comment. (*c*) To secure all facilities and privileges to the press for the due discharge of its responsibilities. (*d*) To represent the press in India in its relations with the public and public institutions and particularly in its relations to Government to set up Committees who would act as basin between the Government and the press as a whole. (*e*) To establish and develop contacts with Association with similar objects in other countries.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks.—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India.—Under the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934 which came into force from 1st April 1935 the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of :—

(*a*) the presidents, vice-presidents and the secretaries of the Local Boards;
(*b*) one person elected from amongst the members by each Local Board;
(*c*) a Managing Director and a Deputy Managing Director appointed by the Central Board;
(*d*) not more than two non-officials, nominated by the Central Government.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Central Government shall nominate an officer of the Crown to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3¾ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11¼ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs.5,62,50,000 and the Balance Sheet of 31st December 1940 showed the deposits at Rs. 96,03,17,483, and Cash Rs.24,82,80,725 with a percentage of cash to liabilities of 25.85.

Agreement with Reserve Bank of India.—The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are :—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

India Act, 1934, and there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent. on the first 250 crores and 1/32 per cent. on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. As for the remaining five years the remuneration to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation.

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments :—

(*a*) during the first five years of this agreement Rs. 9 lacs per annum ;
(*b*) during the next five years of the agreement Rs. 6 lacs per annum ; and
(*c*) during the next five years of the agreement Rs. 4 lacs per annum.

The Directorate.

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of:—

(*a*) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India.

(*b*) Securities issued by State aided Railways, notified by the Central Government.

(*c*) Debentures, or other securities issued under Act, by, or on behalf of a district or municipal board or under the authority of any State in India.

(*d*) Debentures of companies with limited liability registered in India or elsewhere.

(*e*) Goods, or documents of title thereto, deposited with, or assigned to the Bank.

(*f*) Goods hypothecated to the Bank against advances.

(*g*) Accepted Bills of Exchange or Pro-Notes.

(*h*) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g.'

(2) Selling of promissory notes, debentures, stock-receipts, bonds, annuities, stock, shares, securities or goods or documents of title to goods deposited with or assigned to the Bank as security for advances.

(3) With the sanction of the Provincial Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases.

(4) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(5) Investing the Bank's funds in the securities referred to in (1) *a*, *b*, *c* and *d*.

(6) Making, issuing and circulating of bank post-bills and letters of credit to order or otherwise than to the bearer on demand.

(7) Buying and selling gold and silver.

(8) Receiving deposits.

(9) Receiving securities for safe custody.

(10) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims.

(11) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee.

(12) Acting as Administrator, for winding up estates.

(13) Drawing bills of exchange and granting letters of credit payable out of India.

(14) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases.

(15) Borrowing money upon security of assets of the Bank.

(16) Subsidizing the pension funds of the Presidency Banks; and

(17) Generally, the doing of the various kinds of business including foreign exchange business.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

(*a*) For a longer period than six months except as provided in clauses 3 and 14 above;

(*b*) upon the security of stock or shares of the Bank;

(*c*) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms unconnected with each other in general partnership.

(4) Discounts cannot be made or advances given against any security not being a security in which a trustee may invest trust money under the Indian Trusts Act, 1882.

* Govt. Deposits were taken over by Reserve Bank as from 1st April 1935.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Reserve Bank.—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1934 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs. 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of :—

(*a*) A Governor and two Deputy Governors appointed by the Central Government after consideration of the recommendations made by the Board.

(*b*) Four Directors nominated by the Central Government.

(*c*) Eight Directors elected on behalf of the shareholders on the various registers.

(*d*) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact.—The Bank is authorised to carry on and transact the following commercial business, *viz* :—The accepting of money on deposit without interest; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions; the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase; the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1sh. 5 49-64d. and not higher than 1sh. 6 3-16d. respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

The Balance Sheet of the Bank as at 30th June 1940 was as follows :—

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far *each* Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets latest available of the undernoted Banks will give some idea of this:—

LIABILITY OF BILLS OF EXCHANGE REDISCOUNTED AND STILL CURRENT.

	£
Chartered Bank of India, Australia and China	6,011,000
Eastern Bank, Ltd.	878,000
Hongkong and Shanghai Banking Corporation	3,873,000
Mercantile Bank of India, Ltd.	2,194,000
National Bank of India, Ltd.	2,688,000
	15,644,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

(1) Proceeds of import bills as they mature.
(2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
(3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
(4) Imports of bar gold and silver bullion.
(5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets:—

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events confidence has been largely restored. But in April 1923 the Alliance Bank of Simla failed. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The end of June 1938 witnessed a banking crises in South India in the failure of the Travancore National & Quilon Bank Ltd. The bank held a very important position among the South Indian joint stock banks with a paid up capital of Rs. 25 lakhs. The total resources were said to be large and the bank had 78 branches. As soon as the news of the failure was received, the Reserve Bank sanctioned special credit limits to banks in South India and these limits were later doubled. Although the acuteness of the crisis soon subsided, an underlying feeling of nervousness continued until the close of the year.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

Name.	Capital.	Reserve.	Deposits.	Cash and Investments.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½% is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates during the last 13 years :—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1928	6·945	5·456	6·2
1929	6·878	5·788	6·333
1930	6·508	5·277	5·892

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras, Karachi and Rangoon and by the Imperial Bank at Colombo and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below :—

Total amount of Cheques Cleared Annually.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (32 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853; wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North-Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d.* to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 16½ lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87) the Southern Mahratta (1882); and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates terms being found unattractive in view of the competition of 4 per cent. trustee stocks

they were revised in 1896 to provide for an absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, urma and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £ 2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £ 10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £ 3,767,000 in 1920-21 and there was an actual loss of £ 6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £ 813,000 in 1922-23.

The results in succeeding years will be seen from the following statements:—

——	Contribution to General Revenues.	Railway Reserve Fund.	Total Gain
	£	£	£
1926–27 ..	4,486,045	1,108,433	5,594,478
1927–28 ..	4,707,239	3,460,000	8,167,239
1928–29 ..	3,933,834	1,937,895	5,871,729
1929–30 ..	4,588,950	1,561,650	3,027,300
1930–31 ..	4,301,775	8,192,625	3,890,850
1931–32 ..	4,020,150	—	6,900,000
1932–33 ..	*		
1933–34 ..	—	—	—
1934–35 ..	—	—	—
1935–36 ..	—	—	—
1936–37 ..	—	—	—
..	Rs.		
1937–38 ..	2,76,00,000	—	—
1938–39 ..	1,37,00,000	—	—
1939–40 ..	4,33,00,000	—	—

* The contribution to General Revenues due for the year 1932-33 amounts to Rs. 523 lakhs or Rs.13 lakhs less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year.

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs. 84 crores in 1932-33 to Rs. 86 crores in 1933-34 and to Rs. 95·48 crores in 1936-37; but the net result of the year's working showed a gain of Rs. 121 lakhs.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian; the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1936-37 the principal open line improvements were the protection works for the Hardinge bridge E. B. Ry., the renewal of girders on the Gorai bridge E. B. Ry., improvements to Hardwar Station E. I. Ry., also to Howrah Station, the remodelling of certain yards and permanent way renewals.

The principal improvements to open line during 1937-38 were the continuance of the regirdering of the Gorai bridge and the completion of the improvements at Hardwar Station.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(*a*) the directly controlling authority of the State-worked systems aggregating 18,499 miles is on the 31st March 1929.

(*b*) the representative of the predominant owning partner in systems aggregating 29,451 miles,

(c) the guarantor of many of the smaller companies and

(*d*) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on railways and to undertake work on the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore, consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, the Central Publicity Officer and his assistant and the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company-managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State-managed lines have generally adopted the divisional organisation.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Account Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.— The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4¾ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1⅞ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsular Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929, the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its management taken over by His Exalted Highness the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council:—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(*a*) forming reserves for,

(*i*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital,

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i.e.*, will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only ⅓rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining ⅔rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr. Pope, General Executive Assistant to the President of the L. M. S. Railway, was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr. Pope's second report were :—

1. Intensive use of locomotives.
2. Intensive use of coaching stock.
3. Intensive use of machinery and plant.
4. Uneconomical wagons.
5. Combining resources between railways.
6. Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations.
7. Ticketless travel.
8. Methods of increasing earnings.

Job analysis was continued on most of the railways during the year which resulted in substantial economies. Apart from this, Railways continued to explore the possibilities of increasing earnings and reducing working expenses.

Indian Railway Enquiry Committee.

As a result of the recommendation of the public Accounts Committee the Indian Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgewood, C.B., C.M.B., Chief General Manager of the London North Eastern Railway. Its terms of reference were :

To examine the position of Indian State-owned railways and to suggest such measures as may, otherwise than at the expense of the general budget,

(*i*) to secure an improvement in net earnings' due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport; and

(*ii*) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for.

Rates Advisory Committee.

The Railway Rates Advisory Committee continued under the Presidentship of Sir Zahid Suhrawardy. Three cases were pending with the Committee at the beginning of the year and six fresh cases were referred to it for investigation.

Closer Contact with the Public.

The closest possible contact between the Railways and the business community was maintained by means of the Local Advisory Committees, which were first introduced in 1923, meetings with Chambers of Commerce, Trade Associations and personal contact by railway officers with business firms.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhore Ghat Reversing Station.

Note on Publicity (1938-39.)

Special propaganda was undertaken by the Central Publicity Bureau with a view to the stimulation and development of internal traffic, particularly lower class, on an all-India basis. 2,14,000 handbills and over 67,000 folders were printed by the Bureau for these purposes and a special advertising campaign was organised over the East Indian and Eastern Bengal Railways to promote Inter and Third Class traffic.

Publicity was also undertaken by individual railways and 238 important melas and fairs were the subject of special propaganda during the year. In this connection a large number of handbills, folders, pamphlets and posters were printed and distributed, which amounted to more than (*i*) 6,000,000 handbills, (*ii*) 1,076,000 folders and pamphlets and (*iii*) 173,000 posters. In addition to the above propaganda a considerable amount of advertising was done in the local presses by the railways and wide publicity given to the various forms of concessions, such as, Zone tickets, Go-as-you-please tickets, Cheap Suburban Market and Shopping tickets.

Cinema cars and Cinema lorries continued their propaganda activities. Over 241 shows were given at stations to audiences estimated at 690,000 and 383 important rural centres were visited by lorry, where 400 open shows were given to audiences estimated at 500,000.

Output of Railway-owned Collieries.—The output of railway owned collieries during 1930-31 was—

2,926,812 tons for a total of 6,629,014 tons.

Consumed for 1931-32 the figures are

2,484,891 tons for a total of 5,759,398 tons.

For 1933-34 the figures are

2,470,020 tons for a total of 5,935,826 tons.

Total output of coal from Railway owned collieries during 1935-36 was 2,725,400 tons and 1936-37, 2,840,271 tons and 1937-38, 3,850,987 tons. During 1938-39 3,582,604 tons. During 1939-40, 3,589,563 tons.

Number of Staff.—The total number of employees on Indian Railways at the end of the year 1939-40 was 708,541 as compared with 692,071 at the end of 1937-38. The following table shows the number of employees by communities on 31st March 1936, 1937, 1938, 1939 and 1940 :—

Date.	Europeans.	Statutory Indians.					
		Hindus.	Muhammadans.	Anglo-Indians.	Sikhs.	Indian Christians.	Other Communities.
31st March 1936	3,219	504,977	155,439	13,423	8,740	16,824	9,742

Indianisation.—Superior services, following the recommendations of the Lee Commission that recruitment in India be advanced as soon as practicable up to 75 per cent. of the total number of vacancies in the Superior Services of the Railways the various Railway Companies Managing State and other railway lines followed the government lead. As far as concerns State managed Railways the direct recruitments during the year amounted to 12.5 per cent. Europeans and 87·5 per cent. Indians.

Accidents.—The following table shows the number of passengers, railway servants and other persons killed and injured in accidents on Indian Railways, excluding casualties in railway workshops, during the year 1939-40 as compared with the previous year :—

Cause.	Killed		Injured.	
	1938-39.	1939-40.	1938-39.	1939-40.
A.—Passengers				
In accidents to trains, rolling-stock, permanent-way, etc.	66	44	272	134
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	214	183	973	1,132
In accidents on railway premises in which the movement of trains, vehicles, etc., was not concerned	..	2	19	32
Total ..	280	229	1,264	1,298
B.—Railway servants.				
In accidents to trains, rolling-stock, permanent-way, etc.	17	13	152	93
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	155	152	3,487	3,871

Of 3,537 persons killed, 3,130 or 88 per cent. were other than passengers and railway servants and of this number 2,327 were 'trespassers' and 623 'suicides.' Of the 3,537, 37 persons were killed on railway premises due to causes other than the movement of trains, vehicles, etc.

The number of persons other than passengers and railway servants killed rose by 135 as compared with the previous year. This was due principally to increases under 'trespassers' (141), 'those passing over level crossings' (18), which were somewhat counterbalanced by decreases under 'suicides' (18) and 'miscellaneous causes' (6). There is, however, a marked decline in the number of fatal accidents to passengers and railway servants, the decreases being 51 and 21 respectively.

Damage by floods, fires and other causes.—Brief particulars of the more serious floods or other calamities which affected railways during the year under review are given below :—

Five cyclones of comparatively mild intensity were experienced over certain parts of the Assam Bengal Railway between 13th April and 13th May. The damage done to railway property, on the whole, was small and was mainly confined to some station buildings and staff quarters whose roofs were blown away. Some floods also occurred on the railway, mainly on branch lines but the damage done was in no case very serious and at some places there was no interruption to through traffic.

Owing to heavy rain on the 24th and 25th August, several serious slips occurred on the embankment between Anklesvar and Broach on the Bombay, Baroda and Central India Railway which rendered the down main line unsafe. Repairs were effected and double line working was resumed at a restricted speed on the 27th August.

On the same railway twelve wagons loaded with kirby and grass and forming part of a goods train caught fire on the 20th April and the contents were completely destroyed before the fire could be brought under control.

On the Bengal and North Western Railway the monsoons were normal and no serious flooding was experienced, though there were some minor floods.

On the Bengal Nagpur Railway, however, as a result of heavy rain on and from the 6th September in the region of the ghat section of the Katni Branch, the line between Khongsara and Bhonwar Tonk was breached, with the result that a passenger train running between these two stations in the early hours of the 7th September met with an accident. Through running on the line was restored 23 days later.

On the Eastern Bengal Railway floods in the area served by the broad gauge were not severe and the damage actually caused to railway property was less than that of the previous year. On the metre gauge, however, floods were of considerable severity especially on the Lalmanirhat district where water overtopped the rails between Kokrajhar and Basugaon and seriously damaged many bridges between Bijni and Amingaon and Tangla and Rangapara. The total flood damage repairs on this district are estimated to cost about Rs.2,34,000. Some damage was also caused by floods on the Katihar and Dacca districts.

On the same railway a serious fire broke out in shed No. 5 at Cossipore Road causing damage amounting to about Rs.70,000 and eleven days later a more serious fire broke out in goods sheds Nos. 22 and 23 at the same place causing damage in the neighbourhood of Rs.1,92,000. Storms also were experienced by the railway which necessitated an expenditure of about Rs.40,000 on repairs on the broad-gauge.

On the Secunderabad-Kazipet section of His Exalted Highness the Nizam's State Railway a heavy downpour on 4th July led to the line between Jangaon, Raghunathpalli and Ghanapur being washed away at several places. The line was finally restored on the 8th July. Over the intervening period passenger train services were maintained by transhipment at the site.

On the South Indian Railway also heavy rain on the night of 6th August resulted in the line between Salem and Omalur on the Salem-Metur Dam branch being breached at several places. Through running was interrupted on the line till the 8th August. Heavy rain and cyclonic storms also occurred between 14th and 16th November in the Tanjore, Trichinopoly and Madura districts and several breaches were caused.

Amenities for Passengers.—During the year under review steps were taken to provide improved types of carriages and clean and comfortable accommodation in trains. In all cases where measures of the comfort, convenience and safety of the passengers were concerned, special care was taken in the case of the lower classes. Arrangements ensuring the safety of women passengers, the running of restaurant and buffet car services, improvements of amenities at stations such as refreshment rooms, vendors' stalls, waiting halls, additional booking offices and outagencies, were among the subjects taken up. Special attention was also given to the supply of pure drinking water in trains and at stations particularly during the hot weather. Over 4,000 watermen were permanently employed by Class I Railways and these were supplemented by additional 2,500 during the hot weather months.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	.. ..	1,306·39

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	.. ..	2,085·65

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Bombay Baroda.

The Bombay Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee, The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhund railway was amalgamated with it.

(*Mileages are route mileages.*)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15¼ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Mileage open	.. ..	3,683·69

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	..	2,966·85
Capital at charge	..	Rs. 53,40,20,000
Net earnings	..	Rs. 2,91,08,000
Earnings per cent.	..	5.45%

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	..	6,031·42
Capital at charge	..	Rs. 1,48,44,96,000
Net earnings	..	Rs. 4,68,07,000

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	..	2,532·61

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscription, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20·05 miles of which 7·19 will be upon the dry land of the various lands, and 12·86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

COAL.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

Provincial production of Coal during the years 1937 *and* 1938 *(which are the latest statistics available).*

Average ..	..	..	3 1 11	..	..	3 12 1

In 1938 the total production of Indian Coal rose to 28,342,906 tons or 3,306,622 tons (13·2 per cent.) increase on the output of the previous year and is thus the highest figure yet recorded. In the years 1931, 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,803,048 tons in 1930. In 1934 the direction of change was reversed and production increased by 2,268,284 tons (or 11·4 per cent.) from 19,789,163 tons in 1933 to 22,057,447 tons in 1934. In 1935 the increase continued but at a less rate by 959,248 tons (or 4·3 per cent.) to 23,016,695 tons. In 1936 there was again a decrease by 405,874 tons (1·8 per cent.) to 22,610,821 tons, followed in 1937 by an increase of 2,425,565 tons (10·7 per cent.) to 25,036,386 the highest output till then, but which has now been greatly exceeded. This increase was shared by all provinces except Orissa, which showed a slight decrease.

The increased output of 13·2 per cent. in 1938 was accompanied by an increase of 36·2 per cent. in the total value of the coal produced in India to Rs. 10,64,23,835 (£7,942,077) in 1938, from Rs. 7,81,02,439 (£5,872,364) in 1937.

There was also an increase of 10 annas 2 pies in the pit's month value per ton of coal for India as a whole, namely from Rs. 3-1-11 to Rs.3-12-1. This increase in value was recorded from all provinces without any exceptions. In opposition to the trend of 1934, 1935 and 1936, the exports of coal from India in 1937 have more than doubled as compared with 1936, deducting Burma's share. Since the separation of Burma on the 1st April, 1937, it appears in these statistics as a foreign country, and in 9 months has taken a little more than Ceylon did in the year.

The average number of persons employed in the coalfields during the year showed an increase of 16·5 per cent. The average output per person employed showed a decrease from the high figure of 130·2 tons in 1934, which is practically the same as the figure for 1929, namely 130·4 tons, the highest figure recorded, to 124·92 tons in 1938 which is less than the figure 128·59 for 1937. The figures for the last nine years average higher than those previously recorded; these higher figures are partly due to an increased use of mechanical coal-cutters, and partly to concentration of work. During recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. The fall in output per person employed in 1938 is of course due to increased employment.

There was a decrease in the number of deaths by accident from 274 in 1935, 435 in 1936, to 213 in 1937 But the number increased to 338

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

due to accidents in Bengal, Bihar and Hyderabad in 1938. In 1935 there were three major accidents, at Loyabad and Bagdigi collieries in the Jharia coalfield and at Kurhurbaree colliery in the Giridih coalfield, in which 11, 19 and 62 lives, respectively, were lost; in 1936 there were two, at Poidih in the Raniganj field, and Loyabad in the Jharia field, which accounted for 209 and 35 deaths respectively. These figures may be compared with the annual average for the quinquennium 1919-1923, which was 274, the annual average for the quinquennium 1924-1928, which was 218, and the annual average for 1929-1933, which was 186. The death rate was 1.09 per thousand persons employed in 1937 and 1.49 per thousand in 1938: the average figure for the period 1919-1923 was 1.36 for the period 1924-1928 was 1.16, and for the period 1929-1933 was 1.08.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the Iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of Iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hæmatite-jaspers. The ore itself is high-grade micaceous hæmatite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hæmatite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

For some years up to and including 1929 the production of iron-ore in India had been steadily increasing; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (30½ million tons in 1935 and 48¾ million tons in 1936) and France (32·3 million tons in both 1935 and 1936); but her reserves of ore are not much less than three-quarters of the estimated total in the United States and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. From 2,430,136 tons in 1929 the output of iron-ore in India fell to 1,228,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons and in 1935 rose still further to 2,364,297 tons, in 1936 to 2,553,247 tons, in 1937, to 2,870,832 tons valued at Rs.45,86,378 (£344,840), but in 1938 the production fell slightly to 2,743,675 tons valued at Rs.45,56,974 (£340,073). These figures exclude the output of about 25,000 tons, by the Burma Corporation, which is used as a flux in lead-smelting.

The **Steel Industry (Production) Act 1924 (Act No. XIV of 1924)**.—authorised, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from materials wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927; the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British manufacture.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

The catastrophic fall in the production of manganese ore in India from the peak figures of 1927, namely 1,129,353 tons valued at £2,703,068 *f.o.b.* Indian ports to 212,604 tons with a value of £140,022 in 1932 has been recorded previously. In 1933 the output rose slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901, when the output was 120,891 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £929,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. In 1934 there was, however, a partial recovery to 406,306 tons valued at £388,240, further increased in 1935 to 641,483 tons valued at £768,630, in 1936 to 813,442 tons valued at £1,124,422 and in 1937 to 1,051,594 tons valued at £3,229,554 but in 1938 there was a fall in output and prices to 967,929 tons valued at £2,932,445. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one-twenty-second part of the value of the 1927 production. In fact in none of the major Indian mineral industries had the effects of the slump been so seriously felt as in the manganese industry; it is gratifying, therefore, that some measure of recovery can now be recorded, though the value of the output is still less than half the peak figure of 1927, with a much higher value.

The substantial recovery in 1936 is due mainly to increases in the Balaghat, Nagpur and Bhandara districts of the Central Provinces, and to the resumption of work in Panch Mahals. The output from Sandur State fell by a third. The most pleasing feature of this improvement is the recovery of the Central Provinces production from the trivial figure to which it had fallen in 1933 (28,789 tons) to 568,806 tons in 1936.

The recovery in 1936 has been set back by decreases in the Bala Ghat and Bhandara Districts of the Central Provinces, Keonjhar in the Eastern States Agency and in North Kanara (Bombay), the Sandur State (Madras) and in the Chitaldrug districts of Mysore State. There has been an improvement in the production from the Panch Mahals, Chindwara, Bellary, Tumkur and Vizagapatam.

During 1932 and 1933 the majority of mines in the Central Provinces had been closed, including several mines that had never been closed since the commencement of work in 1900 and 1901; there had been a total cessation of production in the Nagpur district and almost total cessation in Bhandara. The amount of ground recovered can be judged from the fact that the production of the Central Provinces averaged 660,559 tons annually during the quinquennium 1924 to 1928. All producing districts are now actively engaged in the output of Manganese-ore.

The partial recovery of the Indian manganese industry during 1934 and 1935 was reflected in an increase of exports, including the quantities exported from Mormugao in Portuguese India, from the nadir of 275,904 tons in 1933 to 864,698 tons in 1935. In 1936 this fell to 742,547 tons, and after rising to 1,151,834 tons in 1937 fell to 648,740 tons in 1938. The United Kingdom even with a decrease of over 127,000 tons retained her position as the chief importer of Indian manganese-ore. The second place as importer was taken by Japan with 113,212 tons, with the U. S. A. third with 89,037 tons and France a close fourth with 80,950 tons. The Belgium German figures show a marked decrease.

The fall in the Indian output of manganese-ore of recent years can be correlated with the fall in the price of first-grade ore, *c.i.f.* United Kingdom ports, from an average of 22.9d. per unit in 1924 to 14.9d. per unit in 1929, and then to 9.5d. per unit in 1932 and 1933. A partial recovery in output in 1934 accompanied a rise in the average price to 10.5*d.* per unit, and to 12.26*d.* in 1936, rising as high as 22.5*d.* in 1937, but in 1938 the price fell to 19.7*d.* per unit.

This continued fall in the price of manganese-ore from 1924 to 1932 is to be correlated with the fact that from 1924 to 1927 the rate of increase of the world's production of manganese-ore was much greater than the rate of increase in the world's production of pig-iron and steel. And although there was a fall in the world's output of manganese-ore in 1928, there was a very large increase in 1929, greater than was justified by the increased production of iron and steel in that year, and it is evident that the world's available supplies of manganese-ore are now much in excess of normal requirements. The present chief sources of production of Manganese-ore are Russia, India, the Gold Coast, South Africa, Brazil, Cuba, Egypt, Czechoslovakia and Japan. Russia is able to place a large quantities of ore on the market at a price with which many Indian producers cannot compete without a return to pre-war railway freights. The Gold Coast has also become a serious competitor of recent years. The large deposits of high-grade manganese-ore discovered near Postmasburg in South Africa are also being developed. With this increasing competition and falling prices it is not surprising, therefore, that in spite of the apparent prosperity of the Indian manganese industry in 1929 and 1930, as judged from figures of production and export, yet by 1930 the industry as a whole had arrived at a stage of relative depression, causing many operators to cease work. Added to increased available supplies there was in 1931 and 1932 a disastrous decline in the activities of the iron and steel industry of the world.

GOLD.

The Statistics given below are the latest available.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way.

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488.8 ozs. valued at Rs. 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 329,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123). In 1933 there was an increase to 336,108.3 ozs. valued at Rs. 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142.9 ozs., but the value increased to Rs. 2,92,71,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722.6 ozs. In 1935 the output rose again to 327,652.5 ozs. valued at Rs. 3,04,01,775 (£2,285,848), and in 1936 to 333,385. 6 ozs. valued at Rs. 3,06,02,413 (£2,300,933). In 1937 the output fell slightly to 331,748.2 ozs., valued at Rs. 3,04,80,105 (£2,291,737). In 1938 the output decreased slightly to 321,137.8 ozs. valued at Rs.3,04,75,397 (£2,274,283) from 330,743.9 ozs. valued at Rs. 3,03,95,871 (£2,285,404). All fields shared in this decrease, except the United Provinces.

SALT. *

There was a moderate increase in the production of salt in India in 1938, made up of increase in the production in Northern India and Madras, with decreases in the production in Sind and Bombay.

The production in Aden was less in 1938 than in 1937; the production in Burma showed a large decrease.

There was a decrease in the imports of salt into India in 1938.

Stock Exchanges.

There are about 475 Share and Stock Brokers in **Bombay**. They carry on business in the Brokers' Hall, bought in 1887 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Province of Bombay. Their powers are defined by rules and regulations framed by the Governing Board and approved by the Government of Bombay. The Board has power to stop business in times of emergencies for 24 hours only and for any further period with the previous sanction of Government. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 20,000.

In November, 1917, a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions. It was revived in 1922 but has again ceased to function. A new Stock Exchange was opened in Bombay with its headquarters in Sir Phirozeshah Mehta Road in February, 1938, known as the Indian Stock Exchange, Ltd.

For many years the **Calcutta** Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 714. The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures. The Association issues a *Year Book* which contains official information relating to all stocks and shares dealt in on the Stock Exchange.

A general meeting of the shareholders annually elects a Committee of 16, which elects several Sub-Committees and Hony. Office Bearers—the President and two Joint Hony. Treasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1941.—J. M. Dutt, President, W. R. Elliot, E. H. Staples, W. A. Black, G. F. Berthoud, Sagarmull Nathany, H. C. Chatterjee, Dr. M. M. Roy, Shambhu Nath Dutt, Gobind Lall Bangur, Kedarnath Poddar, Basant Lall, Chaturvedi, Jagannath Jhunjhunwala, Bishambhar Nath Chaturvedi, Laxmidas Royal, and Kedarnath Khandelwal.

Joint Honorary Treasurers:—Kedarnath Khandelwal, Kedarnath Poddar, and Shambhunath Dutt.

Secretary:—D. Chakravirty, M.A., B.L.

Editor, Year Book:—A. K. Sur, M.A.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July, 1928, by Sir Stanley Jackson, then Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well equipped Library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The Madras Stock Exchange Association, Limited.—The only Registered Institution in Southern India of brokers dealing in Shares, Stocks and Government Securities. Promoted and Registered on 12th August 1937. It has two kinds of members—*viz.*, Founder and Ordinary. The Founder members have to pay an admission fee of Rs. 500 whilst Ordinary members pay Rs. 1,000. Deposit from each member is Rs. 5,000 or such higher amount as the Executive Committee may decide. Each member further has to pay a monthly subscription of Rs. 25. Working hours of the Exchange are between 11-30 a.m. and 12-30 p.m. Dealings in about 18 shares of Companies are allowed on Forward monthly basis. Other shares are quoted on cash basis. Government Securities are also quoted on cash basis, *i.e.*, delivery within seven days.

President.—T. N. Krishnaswami; *Vice-President.*—R. C. Paterson; *Hon. Secretaries.*—S. Narayanaswami and B. N. Viswanathan; *Hon. Treasurer.*—W. L. Knopp. Registered Office Madras. Telephone No. 4075.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years' taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very keen in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another but constantly work in association.

In 1921, the London Chamber of Commerce, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organisation. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it, have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organisation. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir Dinshaw Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organisation languished for lack of support for some years until a number of merchants specially interested in currency and exchange questions revived it in 1926 at Delhi and in 1927 at Calcutta, the initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December, 1926, and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located."

Among the objects for which the Federation is established are the following:—

(*a*) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

(*b*) To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.

(*c*) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(*d*) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.

(*e*) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of the Federation.

(*f*) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.

(*g*) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

Federation of Indian Chambers of Commerce and Industry.

The Federation has 69 Chambers of Commerce and Commercial Associations affiliated to it as Ordinary Members and 5 Associate Members, and is recognised by the Central Government as the premier organisation representing commercial and industrial interests in the country. The headquarters of the Federation are situated in New Delhi. There are two classes of Members, Ordinary and Associate.

Office-Bearers for 1940-41 :

President :—Amritlal Ojha.

Vice-President :—Chunilal B. Mehta.

Honorary Treasurer :—N. R. Sarker, Calcutta.

Secretary :—D. G. Mulherkar.

Office :—28, Ferozshah Road, New Delhi.

Representatives of the Federation on various Committees.

Central Advisory Committee for Lighthouses.—M. A. Master, B.A., LL.B., Bombay; Gaganvihari L. Mehta, Calcutta; Rao Bahadur C. Gopal Menon, Madras.

Imperial Council of Agricultural Research.—D. P. Khaitan, Calcutta.

Standing Rice Committee :—Ashutosh Bhattacharyya, Calcutta.

Wheat Committee :—Ratilal Mulji Gandhi, Bombay.

Indian Tea Market Expansion Board :—D. C. Ghose, Jalpaiguri.

Forest Utilisation Central Advisory Board :—Sir Shri Ram, New Delhi; Lala Padampat Singhania, Cawnpore.

Indian Accountancy Board :—Sirdar P. S. Sodhbans, Lahore.

Indian Institute of Science, Bangalore :—Kapilram H. Vakil, M.Sc. Tech. (Manc.), F.I.C., M.I. Chem. E., F.I.A.S., Bombay.

Export Advisory Council :—Chunilal B. Mehta Bombay; N. R. Sarker, Calcutta.

Governing Body of the International Labour Organisation :—D. S. Erulkar, London.

Permanent Agricultural Committee :—(International Labour Organisation) Walchand Hirachand, Bombay.

International Organisation of Industrial Employers :—(General Council) D. S. Erulkar, London.

ALL-INDIA ORGANISATION OF INDUSTRIAL EMPLOYERS.

The Employer's Delegations to the various sessions of the International Labour Conference felt the necessity of a central organisation in India representing employers of industrial labour in the country with a view to studying various questions coming before these International Conferences from the Indian employers' point of view. Walchand Hirachand, who was the President of the Federation of Indian Chambers of Commerce and Industry, with the consent of the Committee, took the initiative of launching a central organisation in December, 1932, to represent Indian employers. Any organisation representing an industry, the constituents of which are employers of industrial labour, is entitled to become a member of the All-India Organisation of Industrial Employers (briefly called A.O.I.E.). Besides this membership, any industrial concern coming under the Factory Laws, is also entitled to become a member of the Organisation.

The annual subscription for the industrial associations is Rs. 25 and for individual industrial concerns Rs. 10.

The Organisation has on its roll 13 industrial associations representing Ahmedabad and Bengal millowners, Northern India employers, salt industry, national shipping, sugar industry, Baroda State Mills and Industries, glass, coal mining, tea, Delhi Factory Owners and jute industry. Besides, there are more than 104 big industrial concerns as members of the Organisation.

Office-Bearers for 1940-41 :—

President :—Lala Shri Ram.

Vice-President :—Lala Karamchand Thapar, Calcutta.

Hon. Treasurer :—Dr. N. N. Law, Calcutta.

Secretary :—D. G. Mulherkar.

Office :—28, Ferozshah Road, New Delhi.

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office-bearers of the Chamber for the year 1940-41 :—

President :—The Hon'ble Mr. J. H. S. Richardson.

Vice-President :—G. B. Morton, O.B.E., M.C.

Members :—J. H. Burder, H. H. Burn, H. G. Cooper, M.C., D.C.M., D. R. Kinloch, E. B. Pratt; R. R. Haddow and H. G. Stokes.

Secretary :—D. C. Fairbairn; *Deputy Secretary*, J. J. B. Sutherland *Assistant Secretaries :* T. E. Mathieson, J. B. Morrison and W. D. Bryden.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned, for the current year.

The Council of State.—The Hon'ble Sir John Richardson.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Bengal Legislative Assembly.—D. Giaddling, J. R. Walker, R. Haywood, M. A. F. Hirtzel, R. M. Sassoon, W. C. Wordsworth and D. Hendry.

The Calcutta Port Commission.—R. R. Haddow, T. S. Gladstone, G. V. Lloyd, The Hon'ble Sir John Richardson, K. J. Nicolson and W. L. Gordon.

The Calcutta Municipal Corporation.—F. C. Cross, F. G. Watson, J. H. Speller, S. A. Gray, W. R. Humphrey and L. W. Balcombe.

The Board of Trustees for the Improvement of Calcutta.—F. Rooney.

The Bengal Boiler Commission.—R. A. Cole, W. Gow and W. H. W. Urquhart, A.M.I. Mech. E.

The Bengal Smoke Nuisances Commission.—R. J. Oilver; J. M. Grant.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce:—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Insurance Association, Calcutta Import Trade Association. The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic, Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Flour Mills' Association, Calcutta River Transport Association, the Masters' Stevedores' Association and the Association of Paint, Colour & Varnish, Manufactures in India, Calcutta Freight Brokers' Association and European Moffusil Jute Bales Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (G. C. Gee Smyth), Head Office Manager (Mr. F. W. Kendall) and Assistant Superintendents (Messrs. J. B. F. Henfrey, B. Perry and S. J. Warwick) and the staff at the time of the last official returns consisted of 105 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BENGAL NATIONAL CHAMBER OF COMMERCE.

The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community; to represent their views and requirements to the Government, railway and port authorities; to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour; to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 400. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organisations of trades and industries in Bengal.

List of Associations affiliated to the Bengal National Chamber of Commerce:—All-India Soap Makers' Association; All-India Tea Growers' Federation; Association of Engineers; Barisal Mahajan Samity; Bengal Banks' Association; Bengal Cotton Association Ltd., Bengal Galvanized Sheet Merchants' Association; Bengal Hosiery Manufacturers' Association; Bengal Industries Association; Calcutta Iron Merchants' Association; Calcutta Jute Exchange Ltd.; Calcutta Wine Association; East India Jute Association Ltd.; Faridpur District Merchants' Association; Indian Colliery Owners' Association; Indian Insurance Institute; Indian Planters' Association; Metropolitan Banking Association; Murshidabad Silk Asso-

Secretary (Offg.) :—S. R. Biswas, M.A.

Assistant Secretary (Offg.) :—B. C. Kundu, M.A.

Office: 2, Royal Exchange Place, Calcutta.
Telephone: Calcutta 3932. Telegrams: Conjoint.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil members Rs. 50. Merchants, Bankers, Shipowners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1940-41 :—

President.—Sir Badridas Goenka, Kt., C.I.E.

Senior Vice-President.—R. L. Nopany.

Vice-President.—Durga Prasad Khaitan.

Members :—N. L. Puri; G. L. Mehta; M. L. Shah; A. L. Ojha; L. N. Birla; M. G. Bhagat; Dr. H. Ghosh; L. P. Misra; K. D. Jalan; D. P. Khaitan; K. L. Jatia; Faizulla Gangjee; K. M. Naik; D. C. Driver; Kassim A. Mohamed; Pranjivan Jaitha; Y. R. Patel; M. R. Jaipuria.

Secretary.—S. R. Dhadda, M.A., LL.B.

The following Associations are affiliated with the Chamber :—Indian Sugar Mills' Association; Indian Chemical Manufacturers' Association; Indian Paper Mills' Association; Indian Insurance Companies' Association; Indian Jute Balers' Association; Indian Produce Association; East India Jute Association; Calcutta Rice Merchants' Association; Calcutta Kirana Association; Gunny Trades Association; Indian Colliery Owners' Association; Indian Tea Merchants' Association; Marwari Rice Mills Association; Sindhi Merchants' Association; Shareholders' Association; Indian Coal Merchants' Association; Calcutta Tube Importers' Association; Calcutta Metal Merchants' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to covering the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades :—(1) Jute; (2) Gunny; (3) Piece-goods and yarn; (4) Iron and Steel; (5) Coal and Minerals; (6) General.

Chamber's Auditors.—Messrs. S. B. Dandeker & Co., R.A.

MARWARI ASSOCIATION.

160A, CHITTARANJAN AVENUE, CALCUTTA.

The Marwari Association was established in the year 1898.

Its chief objects are :

To promote and advance the moral, intellectual, commercial, economic, political and social interests of the Marwari community and to protect its rights and status.

To arbitrate in the settlement of disputes arising out of commercial transactions between parties either one or both of which are members of the Marwari community, provided the parties are willing to abide by the judgment and decision of the Association.

To adjust controversies between members of the Association.

To communicate with Chambers of Commerce and other mercantile and public bodies within or outside India and to concert and promote measures for the protection of trade, commerce and industries in which Indians, in particular Marwaris, are engaged.

To found and support establishments and institutions for disseminating commercial, technical and general education in different branches of Art and Science in the Marwari community.

To take all necessary steps for promoting, supporting or opposing legislation or other action, affecting the interests of the Commercial communities in general and of the Marwari community in particular either by Government, or any department thereof or by any local body or bodies.

To take such action as may be necessary or securing the redress of grievances of any branch of trade, commerce and industry in which the Marwari community is interested as also such other action as may be conducive to the development and growth of such trade, commerce and industry.

The constituents of the Association are the leading industrialists, exporters and importers of the province of Bengal.

The Association is a member of the Federation of Indian Chambers of Commerce and Industry.

The following are the Office-bearers for the year 1940-41 :—

President.—Ramkumar Jhunjhunwala.

Vice-Presidents.—Dip Chand Poddar; Rameshwar Ganeriwala; Babu Lall Shroff; Hanuman Prasad Saraf.

Honorary Secretary.—Anandi Lall Poddar.

Joint Secretary.—Mahabir Prasad Kasera, B.Com., M.R.A.S.

Treasurer.—Murlidhar Sonthalia.

Auditor.—Madan Lall Chamaria.

Personal Assistant to the Secretary and Office-in-charge.—J. N. Varma, M.A., F.R.E.S. (Lond.).

The following are representatives on public bodies :—

Central Legislative Assembly.—Baijnath Bajoria.

Bengal Legislative Assembly.—Rai Mungtoolal Tapuriah Bahadur.

Board of Economic Enquiry, Bengal.—Harikrishna Jhajharia.

Board of Industries, Bengal.—Babu Lall Shroff.

Non-Official Jail Visitor, Howrah Jail.—Ratan Lall Goenka.

Non-Official Jail Visitor, Presidency Jail.—Kanahaya Lall Jatia.

INTERNATIONAL CHAMBER OF COMMERCE, INDIAN NATIONAL COMMITTEE.

The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928:—

(a) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber," is established, namely:

(i) To facilitate the commercial intercourse of countries.

(ii) To secure harmony of action on all international questions affecting finance, industry and commerce.

(iii) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of businessmen and organisations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 35 commercial bodies as Organisation Members and 54 commercial firms as Associate Members.

OFFICE-BEARERS FOR 1940-41.

President.—Amrit Lal Ojha.

Vice-President.—Chunilal B. Mehta, Bombay.

Honorary Treasurer.—Dr. N. N. Law, Calcutta.

Secretary.—D. G. Mulherkar.

Office.—28, Ferozshah Road, New Delhi.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in the Memorandum and Articles of Association, are to encourage and promote a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and circulate information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals on all subjects of general mercantile interest; and to arbitrate between parties willing to refer to, and abide by, the decision of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 184. Of these 14 represent banking institutions, 16 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 13 insurance companies, 15 engineers and contractors, 120 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee as a rule meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

The Council of State, one representative.

Bombay Legislative Assembly, two representatives.

Bombay Municipal Corporation, one member, elected for three years.

Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chambe for the year 1941-42 and its representative on the various public bodies:—

Bombay University: J. M. B. Gibbons.

Bombay Provincial Transport Authority: J. M. B. Gibbons.

Bombay Provincial Advisory Committee for War Supplies: R. W. Bullock.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrivals Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified, the number of packages of piece-goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued every Saturday and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 12, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the Shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late.

Associated Chambers of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1940.

President: G. B. Morton, O.B.E., M.C.

Millowners' Association, Bombay.

Established in the year 1875, the Millowners' Association, Bombay, is one of the oldest and most important organisations of industrial employers in the country. Membership of the Association is mainly confined to cotton spinning and weaving concerns drawn from every part of India including the Indian States. The great work done by the Association ever since its inceptions has been generally recognised, and the important roll which it fills in the economic life of the country is perhaps nowhere better illustrated than in the representation accorded to it in the Central and Provincial Legislatures, in local authorities such as the Bombay Municipal Corporation, and on public bodies such as the Bombay Port Trust. The Association is also represented on all important all-India bodies constituted by the Central Government connected in one way or another with the interests of the textile industry.

Among the constructive activities of the Association may be mentioned the system of private registration of industrial property marks. By virtue of a special set of rules, the Association has, for now well over 50 years, protected against infringement the tickets, labels and stamps habitually used by members on goods manufactured by them. The success of the scheme of registration ensured its subsequent extension to trade numbers and later on to trade names. By special arrangement with the Department of Commercial Intelligence and Statistics, the Association compiles every month special statistics relating to the import, re-export and export trade in cotton yarn and piece-goods and artificial silk goods of British India and the Province of Bombay. The annual Cotton Mill Statement published by the Association is well-known as a comprehensive and authoritative directory of cotton mills in India.

By a system of market correspondents stationed in important piece-goods consuming markets in India, the Association keeps its members regularly informed of the trend of prices and tendencies in the principal trading centres in the country. The Association also publishes every fortnight detailed lists of the average ex-mill quotations for the principal lines of cotton yarn and piece-goods produced by Bombay mills and the wholesale bazaar prices of the chief lines of goods imported into the principal ports in India.

As large employers of Labour, the Association has always adopted a forward policy in regard to labour problems, and a very large number of recommendations have been made to member mills during the last few years for the amelioration of the conditions of labour employed by constituent members. That some of these recommendations have subsequently been adopted by other large employers of labour and the country is at once a tribute to the excellent spade work done by the Association in the field of social and labour work.

The Association has on its rolls 108 members, including 5 woollen mills, 1 silk mill and 1 cotton ginning and pressing factory.

The following is the Managing Committee of the Association for the year 1941:—Sir Narayan Chandavarkar, (*Chairman*); R. L. Ferard, (*Dy. Chairman*); Sir Ness Wadia, K.B.E., C.I.E.; Sir Chunilal V. Mehta, K.C.S.I.; Sir Homi Mody, K.B.E., M.L.A.; Sir Sorab Saklatvala, Kt., M.L.A.; T. V. Baddeley; B. S. Dabke; Dharamsey Mulraj Khatau; A. Geddis; Hurgovandas Jamnadas Ramji; Krishnaraj M. D. Thackersey; A. M. Mehta; H. F. Milne; A. L. Paramor; A. Pether; G. D. Somani; F. Stones, O.B.E., M.L.C.; C. P. Wadia and Neville N. Wadia.

T. Maloney, M.C., A.M.C.T., (*Secretary*); R. G. Gokhale, (*Labour Officer*).

The Office of the Association is located at 2nd Floor, Patel House, Churchgate Street, Fort, Bombay, and the Telephone Nos. are 31041 and 31042. Tel. Address: Millomutua.

The following are the Association's Representatives on public bodies:—

Legislative Assembly: Sir Homi Mody, K.B.E., M.L.A.

Bombay Legislative Assembly: Sir Sorab Saklatvala, Kt., M.L.A.

Bombay Port Trust: T. V. Baddeley.

Victoria Jubilee Technical Institute: V. N. Chandavarkar.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June, 1924, as a Company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(*a*) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (*b*) the insurance or members of the Company against loss or damage by or incidental to fire, lightning, etc.; and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter-insurances and counter guarantees, etc., etc.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—

F. Stones, O.B.E., (*Chairman.*)

Sir Ness Wadia, K.B.E., C.I.E.; Sir Joseph Kay, Kt.; Sir Sorab Saklatvala, Kt.; H. J. Ramji; D. M. Khatau; A. Pether; A. Geddis; and A. C. M. Cursetjee, M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

(a) To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.

(b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.

(c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.

(d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.

(e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.

(f) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.

(g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.

(h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

(i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.

(j) To secure the interests and well-being of the Indian business communities abroad.

(k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.

(ii) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.

(iii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(iv) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(l) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber has the right of electing one representative on the Central Legislative Assembly and under the Government of India Act 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, one representative on the Bombay Municipal Corporation and one representative on the improvements Committee.

Bombay Piece-Goods Native Merchants' Association.

The objects of the Association are:—

(*a*) To promote, by creating friendly feelings and unity amongst the merchants, the business of the piece-goods trade in general at Bombay, and to protect the interests thereof; (*b*) to remove, as far as it will be within the powers of the Association to do so, all trade difficulties of the piece-goods business and to frame such line of conduct as will facilitate the trade; (*c*) to collect and assort statistics relating to piece-goods and to correspond with public bodies on matters affecting the trade, and which may be deemed advisable for the protection and advancement of the objects of the Association or any of them; and (*d*) to hear and decide disputes that may be referred to the Association for arbitration.

The following are the office-bearers for the current year:—

Chairman.—Devidas Madhavji Thakersey, J.P.

Deputy Chairman.—Purshottam Mulji Kapadia, Advocate.

Hon. Secretary.—Padamsey Damodar Govindji J.P.

Hon. Treasurer.—Mulji Laxmidas.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and oil-seeds trade on a sound footing." It is an influential body with a large membership. Office-bearers for the current year are:—

Chairman.—Sheth Ratansi Hirji, J.P.

Vice-Chairman.—Sheth Khimji Shamji.

Hon. Secretary.—Sheth Nathoo Cooverji.

Secretary.—Ganpatram Narottam Raval.

The address of the Association is Masjid Bunder Road, Mandvi, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and the Indian States in and about these, namely, Kolhapur (with its Jagirs), Sangli, Miraj, (Senior and Junior), Kurundwad (Senior and Junior), Jamkhandi, Sawantwadi, Mudhol, Ramdurg, Jath, Akalkot, Phaltan, Aundh, Bhor, Surgana, Jawhar and Janjira.

President—M. L. Dahanukar.

Vice-Presidents—D. R. Naik, J.P., G. V. Puranik and Rao Saheb P. I. Patil.

Secretary—D. V. Kelkar, M.A.

The office of the Chamber is situated at the Industrial Assurance Building, Church Gate, Bombay.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 50 per annum per set containing monthly Import and Export Statements and Non-Members Rs. 100 per set per annum; Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Chamber elects a representative to the Sind Legislative Assembly, four representatives to the Karachi Port Trust, two to the Karachi Municipal Corporation and two to the North-Western Railway Advisory Committee, Karachi. There were 56 members of the Chamber in March, 1941. The following are the officers for 1941-42 :—

Chairman.—J. Humphrey, O.B.E., J.P.

Vice-Chairman.—J. H. Blackwell, C.B.E., M.C., J.P.

Members of Committee.—W. J. Cullen ; A. T. Orr Deas, M.C. ; N. K. C. Hare ; H. A. Henry ; Lt.-Col. W. B. Hossack, M.L.A. ; R. H. Martin ; J. W. Ogle, E.D. ; and S. E. White.

Ag. Secretary—H. M. Gomes.

Representative on the Sind Legislative Assembly :—Lt.-Col. W. B. Hossack.

Representatives on the Karachi Port Trust—J. H. Blackwell, C.B.E., M.C. ; H. K. C. Hare; A. T. Orr Deas, M.C. and R. H. Martin.

Representatives on the Karachi Municipality—W. F. Enever and Sorab K. H. Katrak.

Representatives on the North-Western Railway Local Advisory Committee, Karachi—B. K. Graham and R. H. Martin.

Public Measurer : G. B. Potts.

The following are the principal ways in which the Chamber gives special assistance to members:—The Committee take into consideration and give an opinion upon questions submitted to them regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations, and officials interested in trade, commerce or industry in the Madras Province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at any ordinary meeting of the Chamber. Other Chambers of Commerce may be Affiliated Members. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in every 10 years. The subscription shall not exceed Rs. 300 per annum, payable quarterly in advance. Each Affiliated Member shall pay an annual subscription of Rs. 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks.

There are 47 Firms, who are Members of the Chamber ; and there are 5 Affiliated Members and 7 Honorary Members of the Chamber in 1941. The officers and the committee of the Chamber for the year are as follows :—

Chairman.—J. Nuttall.

Vice-Chairman.—R. D. Denniston.

Committee.—H. F. Carter ; C. G. W. Cordon; G. H. Hodgson, M.L.C. ; W. H. Peppercorn ; W. T. Williams.

Joint Secretaries.—Sir F. E. James, O.B.E., M.L.A. ; G. E. Walker, M.L.A., Barrister-at-Law.

The following were the Chamber's representatives on various public bodies during 1940 :—

Corporation of Madras.—J. R. Galloway, R. W. Theobald, and H. I. Wonfor.

Madras Port Trust.—R. D. Denniston, Th. A. Lykiardopulo, C. Elphinston and H. S. Town.

Madras and Southern Mahratta Railway Advisory Committee.—C. D. Priestley.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber holds survey and arbitration, issues certificates of origin and certificates of invoices; certificates of sampling, analysis and weights.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1923. Members of the Chamber hold seats in the Madras Legislative Assembly and the Chamber has also been accorded the right of electing a representative to that body. Co-jointly with the Nattukottai Nagarathars' Association the Chamber has the right of electing a representative to the Federal Assembly. Under the Madras City Municipal Amending Act, 1926, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Board of Communications, the Provincial Cotton Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospitals, Income-tax Board of Referees, Excess profits Tax Board of Referees, the Madras Marketing Board, the Madras City Excise Licensing Board, the Indian Tea Marketing Expansion Board, The Madras Port Committee, Madras War Supply Committee, etc. The Chamber issues a monthly magazine entitled "Southern India Commerce."

The Chamber has about 450 members on the rolls and has its own building. Several Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President—Kumarajah M. A. Muthiah Chettiar of Chettinad.

Vice-Presidents—Dewan Bahadur V. Shunmuga Mudaliar and Khan Bahadur Adam Hajee Mohamed Sait.

Secretary—P. Raghavan Nair, B.A., B.Com.

NORTHERN INDIA.

"COMMERCE HOUSE," LAWRENCE ROAD, LAHORE.

The Northern India Chamber of Commerce was founded in 1923 and has its headquarters at Lahore. The business of the Chamber is conducted by the Chairman, and a Committee consisting of a minimum of eight elected members, and a maximum of three co-opted members.

It has the right of representation on the Communications Board, Punjab; the Joint Development Board, Punjab; the North-Western Railway Advisory Committee, Lahore Branch; the Managing Committee of the Hailey College of Commerce, Lahore; Board of Economic Enquiry, Punjab; Punjab College of Engineering and Technology Advisory Council, Lahore; Board of Industries, Punjab; Electricity Board, Punjab; Industrial Survey Advisory Committee, Punjab; Board to deal with trade and prices in the Punjab; Provincial Advisory Committee of Supplies, Punjab; Punjab Legislative Assembly, and also nominates a panel for the Railway Rates Advisory Committee.

The Chamber is affiliated with the Associated Chambers of Commerce of India, and with the Federation of Chambers of Commerce of the British Empire, London.

A Tribunal of Arbitration has been set up, under the Rules of which arbitration relating to commercial disputes are carried out on behalf of members and non-members. Surveys of merchandise are also frequently held. Certificates of origins are issued for goods manufactured in India. A set of tested weights is kept for testing weights of members and non-members.

The aim of the Chamber is to protect and further commercial, industrial and agricultural interests in Northern India by every possible means, and it is the constant endeavour of the Chamber to achieve as much as possible for the good of the common interest of members—the business prosperity of Northern India.

Chairman:—J. C. F. Davidson.

Vice-Chairman:—Rai Bahadur Pandit Balak Ram Pandya.

Committee.—Lala Aftab Rai, Bar-at-Law; F. W. V. Ellvers; R. S. Fairley; L. Ganga Saran; P. H. Guest, M.L.A.; A. A. Phillips, V.D.; Dewan Bahadur Dewan Krishna Kishore Dahriwala; C. T. Mason; R. G. Osborn; Hon'ble Rai Bahadur L. Ram Saran Das, C.I.E., M.C.S.; Sir William Roberts, Kt., C.I.E., M.L.A.; Sardar Sahib Sardar Sapuran Singh Chawla; Rai Bahadur L. Sohan Lal, M.L.A.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 76 members, three honorary members and nine affiliated members.

The following are the officers:—

President.—R. Menzies, O.B.E., V.D.

Vice-President.—B. L. Gray.

Members.—Rai Bahadur Lala Rameshwar Prasad Bagla, E. J. W. Plumber, K. J. D. Price, Rai Bahadur Babu Ram Narain, B. P. Srivastava, A. Grant, Sardar Inder Singh and A. C. Inskip, O.B.E.

Representative on the United Provinces Legislative Assembly.—Sir Jwala Prasad Srivastava, Kt.

Secretary.—H. W. Morgan.

Head Clerk.—R. K. Mehrotra.

MERCHANTS' CHAMBER OF UNITED PROVINCES, CAWNPORE.

The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership, Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery works, Banks and Firms engaged in extensive dealings in Piece-goods

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

country produced Hide and Leather. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U. P. Legislative Assembly, U. P. Board of Traffic and Communication, Court of the Lucknow University, Rly. Advisory Committees, and about 15 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies Act 1913, with a license under Section 26, provides for an Executive consisting of 1 President, 2 Vice-Presidents and 18 ordinary Members of the Council. A whole-time Secretary is attached to the organisation.

President.—Ram Ratan Gupta.

Senior Vice-President.—Guru Prasad Kapur.

Junior Vice-President.—H. G. Misra.

Secretary.—K. M. Purkayastha, M.A.

UNITED PROVINCES CHAMBER OF COMMERCE, CAWNPORE.

The United Provinces Chamber of Commerce was established in 1914, and represents all the important commercial and industrial interests of the Province. The Chamber is recognised both by the Provincial and Central Governments and jointly returns a representative to the United Provinces Legislative Assembly. It is represented on the Cawnpore Municipal Board, the Local Advisory Committee of the East Indian Railway, Great Indian Peninsula Railway, Rohilkhund Kumaon Railway, Bengal and North Western Railway and on the Informal Committee of the East Indian Railway. The Chamber's representatives also sit on the Provincial Boards of Industries, Economic Enquiry and Agriculture, High School and Intermediate Education and Governing bodies of Government Textile and Dyeing and Printing Schools, Agricultural College, Sir H. B. Technological Institute, Cawnpore, Board of Traffic and Communications, Senate of the Lucknow University, and Employment Board, U. P. and various other public bodies in the Province. The Chamber is affiliated to the Federation of Indian Chambers of Commerce and Industry as also to the National Committee of the International Chamber of Commerce.

Membership :—Any firm, individual, company, corporation or association engaged or interested in trade, commerce or industry is eligible for membership of the Chamber.

The number of members on register is 180 (115 Local and 65 Mofussil).

INDIAN CHAMBER OF COMMERCE, LAHORE (PUNJAB).

The Indian Chamber of Commerce (Desi Beopar Mandal), Lahore, was established in 1912 and was registered under the Indian Companies Act, 1882, in 1913. The main object for which the Chamber was established was to safeguard the interests of Indian commerce, trade and agriculture. The Chamber is recognised by the Punjab Government and the Government of India. It is affiliated to the Federation of Indian Chambers of Commerce and Industry and is a member of the International Chamber of Commerce, Paris. The Chamber issues Certificate of Origin and has a Board of Arbitration to settle commercial disputes. The members of this Chamber have franchise in the commerce constituency of the Punjab Legislative Assembly along with three other Chambers—The Punjab Chamber of Commerce, The Northern India Chamber of Commerce, Lahore, and Punjab Trades Association.

Members of the Committee for 1940-41 are :—

President.—S. R. Jariwala, M.A., LL.B., Chief Agent, Central Bank of India Ltd., Lahore.

Vice-Presidents.—H. D. Mehta, Managing Director, Northern India Insurance Co., Ltd., Lahore, R. K. Jain, Director-in-charge, Bharat Insurance Co., Ltd., Lahore.

Hon. Secretary & Member of the Committee.—Sirdar P. S. Sodhbans, F.L.A.A. (Lond.), B.A., of Messrs. Sodhbans & Co., Auditors, Lahore.

PUNJAB.

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North West Frontier Province and Kashmir. The Chamber has Branches at Amritsar and Lahore. Memberships by ballot and is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Re. 1 and the rate of subscription Rs. 180 per year. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association, and shares representation in the Indian Legislative Assembly with other Chambers which are members of the Associated Chambers of Commerce of India, in the seat allotted to the Associated Chambers. The Chamber is a member of the Federation of Chambers of Commerce, London. The Chamber is represented on the Municipal Corporation of Delhi as well as on the N. W. Railway Advisory Committee, Lahore.

Members of the Managing Committee, 1940-41.—R. N. B. Brunt, *Chairman*, (Messrs. Burmah-Shell Oil Storage & Distributing Co., of India, Ltd., New Delhi); Rai Bahadur P. Mukerjee, (Messrs. P. Mukerjee & Co., Ltd., (Delhi); W. A. H. Heath, (Messrs. Govan Bros. Ltd., New Delhi); W. T. A. Page, (Lloyds Bank Ltd., Delhi); C. J. L. Stokoe, (Messrs. Bird & Co., Delhi); U. N. Sen, C.B.E., (The Eastern News Agency, Ltd., New Delhi); Lala Shankar Lall, (The Delhi Cloth & General Mills Co., Ltd., Delhi); The Hon'ble Sardar Bahadur Sardar Sobha Singh, O.B.E., *Deputy-Chairman*,

Members.—The Coromandel Co., Ltd.; Ripley & Co.; Gordon, Woodroffe & Co., (Madras) Ltd.; Wilson & Co.; Best & Co., Ltd.; Burmah-Shell Oil Storage and Distributing Co. of India Ltd.; The Agent, Imperial Bank of India; The Deccan Sugar and Abkhari Co., Ltd.; Samalkot & Parry & Co., Ltd., Vizagapatam.

Members of the Committee.—S. A. Cheesman (*Chairman*), J. R. Pierce, W. A. Huitt, G. M. Lake (*Secretary*).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. Subscription for members whose place of business is in Cocanada, Rs. 120 per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, and is administered by the Director-General of Commercial Intelligence and Statistics assisted by a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics. It embraces two distinct classes of work: (*a*) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (*b*) the compilation and publication of All-India statistics.

The Government of India felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they established in 1933 the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. This Bureau has now been placed in charge of the Economic Adviser to the Government of India appointed in 1938.

Among the important publications for which the Director-General is responsible are the following annual volumes :—Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (*a*) information as to tariff changes in foreign countries which affect Indian interests, (*b*) notices of tenders called for and contracts placed by Government departments and public bodies, (*c*) crop reports and forecasts, (*d*) Government orders, communiques and other notifications affecting trade, (*e*) analysis of Indian trade statistics, (*f*) market reports, price and trade movements of the staple exports and imports, (*g*) trade enquiries for securing trade introductions, and (*h*) monthly, quarterly and annual reports of the Indian Trade Commissioners abroad and summaries of the leading features of consular and other trade reports.

The Review of the Trade of India and the monthly Survey of business conditions in India are now being published by the Statistical Research Bureau.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence and Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 20,133 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 384 technical and commercial journals

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with the Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Osaka (Japan), Mombasa (East Africa), New York, Alexandria and Sydney (Australia), and the Indian Trade Agent, Kabul, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

TRADE COMMISSIONER SERVICE IN INDIA.

BRITISH TRADE COMMISSIONER SERVICE

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world ; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible ; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is a policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area ; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers ; to visit the principal commercial centres ; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade ; to make an annual general report on the conditions and prospects of trade in his area ; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department ; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area ; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

H. M.'S TRADE COMMISSIONERS IN INDIA

Calcutta—

Sir Thomas M. Ainscough, C.B.E.,
His Majesty's Senior Trade Commissioner in India, Burma and Ceylon.

A. Schofield,
His Majesty's Trade Commissioner at Calcutta.
Post Box No. 683, Fairlie House, Fairlie Place.
Telegraphic Address—"Tradcom, Calcutta."
Telephone No.—"Calcutta 1042."

Bombay—

W. D. M. Clarke,
His Majesty's Trade Commissioner at Bombay.
Post Box No. 815, 3, Wittet Road, Ballard Estate.
Telegraphic Address—"Tradcom, Bombay."
Telephone No.—"Bombay 23095."

Burma—

Imperial Trade Correspondent, Collector of Customs, Rangoon.

Ceylon—

Imperial Trade Correspondent,
Director of Commerce and Industries, Colombo.

THE CANADIAN COMMERCIAL INTELLIGENCE SERVICE.

The Canadian Department of Trade and Commerce comprises, as one of its principal divisions, the Commercial Intelligence Service. This Service had its beginnings prior to the establishment of the Department in 1892 and has since undergone considerable expansion. Prior to the war it included a headquarters staff in Ottawa and thirty-four Trade Commissioner offices abroad, seventeen of these being in British and an equal number in foreign countries. Offices in enemy countries have since been closed.

The office of the Canadian Trade Commissioner for India, Burma and Ceylon was established in Calcutta in 1922 and was transferred to Bombay on April, 1940. Its services are at the disposal of Canadian firms interested in the export of their goods to the Indian market and to others who may be interested in the purchase of Indian products. It is also in regular touch with import houses in India and is prepared to co-operate as well with exporters seeking a market in Canada for any Indian commodities.

Canadian Government Trade Commissioner in India, Burma and Ceylon.—Paul Sykes, Gresham Assurance House, Mint Road, Bombay, P. O. Box 886. Telephone—20672; Tel. Address:—"Canadian, Bombay."

THE AUSTRALIAN GOVERNMENT TRADE COMMISSIONER SERVICE IN INDIA.

Trade between India and Australia has increased to such an extent in recent years that the Governments of India and Australia in 1940 decided to appoint Trade Commissioners in their respective countries. The Australian Government Trade Commissioner is located in Calcutta and covers the territory of India, Burma and Ceylon.

The Australian Government Trade Commissioner service is comparatively young but already Commissioners are stationed in New Zealand, America, Canada, Japan, China, Netherlands East Indies, India and Egypt. The Trade Commissioner deals with enquiries received from India, Burma and Ceylon and places Indian Merchants and Firms in touch with manufacturers in his country. He maintains a flow of trade information to the Department of Commerce, Australia, for dissemination to Australian exporters and information on specific openings for trade, including Government contracts and tenders for which Australian products might be suitable. He watches the demand for specific goods and gives information concerning competition to be met in their supply. An important function is to provide details of credit conditions and terms of payment. Market surveys on specific commodities are prepared and sent for the information of trade interests in Australia.

The Australian Government Trade Commissioner acts on behalf of the Government of Australia in all matters necessitating direct approach to the Government of India and maintains liaison with all foreign consular and trade officials. His monthly and annual reports on trade conditions in India, Burma and Ceylon are circulated among Chambers of Commerce and Chambers of Manufactures in Australia.

Information and literature is available on all aspects of trade, travel or settlement in Australia.

Australian Government Trade Commissioner in India.—H. R. Gollan, D.S.O., M.C. *Address:* 2, Fairlie Place, Calcutta. *Telegraphic Address:* "Austrade," Calcutta. *Telephone Number:* Calcutta 3431.

CEYLON TRADE COMMISSIONER FOR INDIA.

In 1937 the Government of Ceylon decided to send over to India a Trade Commissioner for the purpose of stimulating trade between Ceylon and India. "Ceylon House in Bombay" was thus inaugurated in June, 1937, and was to continue operation for a period of three years as an initial experiment. At the expiration of the first period of three years, it has been decided by the Ceylon Government to continue Ceylon House for a further period. The purpose of Ceylon House is not actually to enter into trade directly but to put Ceylon producers in direct touch with Indian importers and to see that all Ceylon products get a fair deal in the Indian markets or find outlets where they are not much known. In pursuance of this policy the Commissioner helps all local inquirers in obtaining the necessary trade contacts. Information and literature relating to Ceylon and Ceylon produce are being supplied by the Commissioner and free advice is given to intending tourists.

Trade Commissioner.—M. H. Kantawala, M.A. (Cantab.), Bar-at-Law, Ceylon Civil Service; *Secretary:*—A. B. A. Mediwake, B.A. (Lond.). *Address:* Ceylon House, Petit Building, Hornby Road, Bombay. *Telegram:* Lankatrade. *Tel.* 31239.

THE INDIAN CENTRAL COTTON COMMITTEE.

Office.—Nicol Road, Ballard Estate, Bombay.

Secretary.—D. N. Mehta, B.A. (Oxon).

Asst. Secretary.—C. J. Bocarro, M.B.E., M.A.

Director, Technological Laboratory.—Dr. Nazir Ahmad, O.B.E., J.P., M.Sc., Ph.D., F.Inst.P.

Sind.—Rao Saheb K. I. Thadani, Director of Agriculture.

The Director-General of Commercial Intelligence and Statistics, *ex-officio.*

REPRESENTATIVES OF CHAMBERS OF COMMERCE AND ASSOCIATIONS.

The East India Cotton Association, Sir Purshotamdas Thakurdas, C.I.E., M.B.E.

The Bombay Millowners' Association, Sir Sorabji D. Saklatvala, M.L.A.

The Bombay Chamber of Commerce, L. F. H. Goodwin.

The Indian Merchants' Chamber, C. B. Mehta.

The Karachi Chamber of Commerce, A. P. Darlow.

The Ahmedabad Millowners' Association, Chandulal P. Parikh, M.L.A.

The Tuticorin Chamber of Commerce, J. Vonesch.

The Upper India Chamber of Commerce, Captain S. R. Pocock, M.C., M.L.A.

The Empire Cotton Growing Corporation, Sir William Roberts, C.I.E., M.L.A.

COMMERCIAL REPRESENTATIVES NOMINATED BY CENTRAL GOVERNMENT.

Central Provinces and Berar.—Rao Saheb P. V. Deshmukh; Y. G. Deshpande.

Madras.—J. M. Doak.

Punjab.—Kanwar Raj Nath.

Bengal representative.—Girija Prosanna Chakraverty.

CO-OPERATIVE BANKING REPRESENTATIVE.

Sir Chunilal V. Mehta, K.C.S.I. (*Vice-President*).

REPRESENTATIVES OF COTTON-GROWING INDUSTRY.

Madras.—Rao Bahadur R. V. Ramasundaram Pillai; H. Sitarama Reddy Garu, M.L.A.

Bombay.—Yashwantram Rajaram Joshi; Mangesh Babhuta Patel, M.L.A.

United Provinces.—Chaudhari Sheomangal Singh, M.L.A.; Rai Bahadur Kunwar Laxmiraj Singh, M.L.C.

Punjab.—Sardar Bahadur Gurbachan Singh, M.L.A.; Ch. Mohammad Yasin Khan, M.L.A.

Central Provinces and Berar.—Rao Bahadur Sir Madhaorao Deshpande, K.B.E.; Suganchand Tapadia.

Sind.—Roger Thomas.

The Indian Central Cotton Committee was constituted by the Government of India in March 1921, as a result of the recommendation of the Indian Cotton Committee of 1917-18. Originally the Committee was purely an advisory body but with its incorporation under the Indian Cotton Cess Act in 1923, it became an administrative body having at its disposal funds for the improvement and development of the growing, marketing and manufacture of cotton in India. The funds of the Committee are derived from the Cotton Cess of two annas per bale (four annas for the first three years) which was imposed in 1923. Having complete control over its funds, the Committee has been able to build up a satisfactory reserve and is at present spending over Rs. 10 lakhs per annum on cotton improvement, mainly on agricultural and technological research and seed distribution and marketing schemes.

The activities of the Committee now extend to all branches of cotton improvement in India, and, as an authoritative body to advise the Central and Provincial Governments on important matters of cotton policy, it has attained an outstanding position. The Committee provides funds for research into cotton problems of all-India importance and for the development, extension and marketing of improved varieties of cotton. The aim, however, has always been to supplement and not supplant the work of the Agricultural Departments in the cotton growing provinces and Indian States. Including as it does representatives of growers, agricultural officers, traders, spinners and manufacturers, it has been an invaluable forum for the discussion of many problems of general concern. A list of the members constituting the Committee and the various interests they represent as on 31st December 1940 is given below :—

MEMBERS OF THE COMMITTEE.

President.—P. M. Kharegat, C.I.E., I.C.S., Vice-Chairman, Imperial Council of Agricultural Research, *ex-officio.*

(*a*) Dr. W. Burns, C.I.E., Agricultural Commissioner with the Government of India, *ex-officio.*

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS.

Madras.—P. H. Rama Reddi, I.A.S., Director of Agriculture.

Bombay.—W. J. Jenkins, C.I.E., I.A.S., Director of Agriculture.

United Provinces.—The Director of Agriculture.

Punjab.—H. R. Stewart, C.I.E., I.A.S., Director of Agriculture.

Central Provinces & Berar.—J. C. McDougall, I.A.S., Director of Agriculture.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

REPRESENTATIVES OF INDIAN STATES.

Hyderabad State.—Nizam-ud-Din Hyder, Director of Agriculture.

Baroda State.—R. G. Allan, C.I.E., Commissioner of Agriculture.

Gwalior State.—Lt. Sardar D. K. Jadhav, Director of Agriculture.

Rajputana and Central India States.—T. R. Low, I.A.S.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL.

Rao Bahadur S. S. Salimath, Deputy Director of Agriculture, Southern Division, Dharwar; T. G. Rama Iyer, Director of Agriculture in Mysore, Bangalore; Rao Bahadur V. Ramanatha Ayyar, Cotton Specialist, Coimbatore; Rai Bahadur S. V. Kanungo, Revenue Minister, Holkar State, Representative of the Holkar State; Dr. Chellaram Shewaram, Representative of the Karachi Indian Merchants' Association; Dr. B. L. Sethi, Economic Botanist (Cotton & Rabi Cereals) to the Government of United Provinces, Cawnpore; The Hon'ble Mr. V. Ramadas Pantulu, President, Madras Provincial Co-operative Bank, Madras; Sir Shri Ram Representative of the Cotton Millowners' of Delhi; Jivandas Ladhabhai, Representative of the Karachi Cotton Association Ltd.; Dewan Bahadur Sir T. Vijayaraghavacharya, K.B.E.; S. A. Jamalullah, Deputy Director of Agriculture, Parbhani; Sardar Rao Bahadur Bhimbhai R. Naik, Sagrampura, Surat; Dr. T. E. Gregory, Economic Adviser to the Government of India, Dr. P. J. Gregory, Second Economic Botanist, Bengal.

Amongst the research schemes of the Committee, plant breeding schemes for the improvement of quality naturally take pride of place. The agencies employed by the Committee for its research work have varied little in character since 1923, though they have grown in number. It continues to maintain a Technological Laboratory at Bombay which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. A new feature is the addition to the Laboratory of a Testing House which is recognised by the B.I.S.F.A. It also provides a large proportion of the funds for the Indore Institute of Plant Industry.

For a considerable period the Committee restricted its grants to agricultural research, but in 1930 it was decided that the time had come to add its support to the efforts already being made to bridge the gap between the experiment station and the cultivator and to supplement the funds which the Agricultural Departments were devoting to the introduction of improvements into agricultural practice. Special attention from that time began to be devoted to seed introduction schemes.

The Committee has not stopped at the production of better cotton, but from its inception has devoted special attention to better marketing, to the prevention of adulteration and other abuses and to many other problems connected with the cotton trade of the country. Regulated Cotton Markets existed in Berar before the establishment of the Committee, and that system which had stood the test of time was commended with certain modifications for general adoption. Regulated Cotton Markets have now been established in Bombay, Central Priovinces, Madras, Hyderabad, Baroda and Indore. Similarly, on the recommendation of the Committee, the Cotton Transport Act was passed in 1923 by which Provincial Governments are empowered to exclude from any specified area cotton, *kapas* or seed from outside unless required for a special purpose and covered by a license. Prior to the passing of this Act, inferior cottons used to be imported in large quantities into the staple cotton tracts for purposes of adulteration, to the detriment of the reputation of several valuable cottons. The Act is now in force in almost all the important staple cotton areas of Bombay, Madras and the Central Provinces as well as in Baroda, Rajpipla, Chhota Udepur, Hyderabad and Indore, etc. In 1925, on the recommendation of the Committee, the Cotton Ginning and Pressing Factories Act was passed. This provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. Recently the Act has been used for the prevention of watering and for the mixing of non-cotton articles with cotton. The Committee has also taken steps to bring to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale.

It may be stated without hesitation that, as a result of the efforts of the Committee, the last seventeen years have seen a marked change in the character of the Indian crop, particularly in the percentage of short and medium staple. Equally important is the result of agricultural research and its application to the yield of cotton per acre. The average yield per acre in the quinquennium 1932-37 for the whole country is 11% higher than for the quinquennium 1927-32, despite the fact that in two years of the second quinquennium the cotton crop in some important areas was seriously damaged by abnormal weather conditions. The ascertained area under improved cotton is now about 27% of the total. The ultimate ideal is to encourage the establishment of single variety tracts wherever agricultural conditions and the limitations of irrigation supply and soil make this possible.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, *viz.*, The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association, Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October, 1932. With effect from 1st November, 1932, the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E. (*President*); Haridas Madhavdas, (*Vice-President*), Sellers' Panel; S. B. Dalal Hansraj Jivandas, Purshotamdas Harkisondas (*Sellers' Panel*); J. R. Kay, Ramdas Kilachand, C. Shuttleworth, J. P. Patel (*Buyers' Panel*); Ramdeo A. Podar, Umadutt Surajmal Nemani, Mandanlal Paliram, Premchand Kedia, Banarsilal Basantlal Seksaria, Chunilal Krishnalal Sayta (*Brokers' Panel*); Dr. V. H. Patil, M.Sc., Ph.D., Rao Saheb F. B. Laxmeshwar Kurkoti (*Cotton Growers' Representatives*), nominated by the Government of Bombay; Sardar Rao Bahadur Bhimbhai R. Naik, H. Sitarama Reddy, B.A., B.L., M.L.A., Rao Bahadur Sir Madhaorao G. Deshpande, K.B.E. (*Cotton Growers' Representatives*), nominated by the Indian Central Cotton Committee.

Officers.

C. M. Parikh, B. Com., *Secretary*; A. R. Menezes, J.P., *Deputy Secretary and Manager, Clearing House* and S. A. P. Aiyar, *Assistant Secretary*.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user, whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the cotton trade; to establish just and equitable principles in the trade and to maintain uniformity of control; to fix or adopt standards of classification of cotton; to acquire, preserve and disseminate useful information connected with the cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the cotton trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted; to establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House; to regulate the handling and exportation of cotton from India and the importation of cotton into India in so far as it may be imported; to bring, prosecute, or defend, or aid in bringing, prosecuting, or defending, any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, a large Trading Hall on the lines of Liverpool and New York Exchanges, Survey Rooms, Appeal Rooms, etc.

The Association has another fine Building, "The Cotton Exchange" at the corner of Sheikh Memon Street and Kalbadevi Road, wherein trading in "forward" contracts is conducted. It comprises of a basement, a ground floor (Trading Hall) with two galleries and six other upper floors. There are 114 telephone cabins for members on the ground floor and the galleries. The top floor accommodates the administrative offices of the Association and the Clearing House, and the remaining five floors contain 113 rooms for members' offices.

The Association has a membership of 448.

The Bombay Cotton Annual containing matters relating to every branch of the trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.—The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blocade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1939-40, the total area in all territories reported on was computed at 21,356,000 acres and the total estimated outturn was 4,942,000 bales of 400 lbs. as compared with 23,482,000 acres and 5,076,000 bales in 1938-39. Bombay, Punjab, the Central Provinces and Hyderabad are the chief producing areas.

Cotton Trade.—Bombay is the great centre of the cotton trade. The principal varieties are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection; hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use of sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piecegoods.

Indian Cotton Mill Industry.—The foundations of the Indian Cotton Mill Industry were laid in the middle of the last century. Bombay saw its first mill in the year 1854 owing to the enterprise of a Parsee Merchant, Mr. Cowasjee Nanabhoy Davar. Other mills followed later, and the following table shows how, by successive stages, the Industry's productive capacity has grown :—

Year.	Number of Mills.	Number of Spindles.	Number of Looms.
1876 ..	47	1,100,112	9,139
1880 ..	56	1,461,590	13,502
1890 ..	137	3,274,196	23,412
1900 ..	193	4,945,783	40,124
1905 ..	197	5,163,486	50,139
1910 ..	263	6,195,671	82,725
1915 ..	272	6,848,744	108,009
1920 ..	253	6,763,076	119,012
1925 ..	337	8,510,633	154,292
1930 ..	348	9,124,768	179,250

It may be noted that the rate of development has not been uniform in all centres of the Industry in India, and although in the initial stages, the Industry was concentrated in Bombay owing to its advantageous geographical and climatic situation, this pre-eminence of Bombay was not maintained in subsequent years. The industry's development in later years has been more rapid in other Provinces in India and particularly in the Indian States.

From 1860 to 1865, progress was materially assisted by the accession of wealth which accrued to Bombay commercial interests owing to the high prices at which Indian cotton was sold during the American Civil War. Another factor which contributed to the rapid growth of the Industry was the establishment of a profitable export yarn trade with China. In the years 1865 to 1871, the Industry suffered a severe setback to its prosperity owing to the financial crash which followed the American Civil War. In the early 'seventies, after the restoration of credit, the industry made rapid progress, though in the initial stages, the development of the weaving side of the industry was comparatively slow. The profitable yarn trade with China enabled the Bombay mills to make further progress in the 'seventies and 'eighties of the last century.

Cotton Excise Duty.—The growth of the industry in India during the early years was regarded with a jealous eye by the Lancashire manufacturing interests whose agitation resulted in the Government of India exempting from import duty coarse yarn and cloth in 1878. This resulted in the substitution of the exempted classes of goods for the medium and fine goods

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

previously imported from England, to the detriment of the growing indigenous industry. In 1893, the Indian mints were closed to the free coinage of silver. This step had a disastrous and almost immediate effect on the industry. With the precision of an automatic machine, business with China and Japan came to a standstill as the exchange dropped by about 12 to 15 per cent. to the detriment of India. This measure was followed three years later by the imposition of an excise duty of 3½ per cent. on cloth manufactured in Indian mills for the purpose of countervailing the import duties which had been re-imposed at the end of 1894. From the date of its imposition, until it was finally abolished in the year 1926 this excise duty was condemned by all shades of public opinion in India as an inequitable and unjust burden on the indigenous industry. The closing years of the last century also witnessed the beginnings of the growth of a Mill Industry in China and Japan, which contributed greatly to the cutting off of the Indian yarn trade with the Far East in the following years. Japan later proved to be a very formidable rival to India in the China Market, and eventually threatened the very existence of the Indian industry even in its home market. The loss of the export trade with China and Japan, with whom Indian mills were doing a profitable business in yarn, was a serious matter, and was the main reason for the development of the weaving side of the Indian industry, which had previously been relatively neglected.

The first Swadeshi Movement afforded a temporary fillip to the Indian industry in the years 1905 to 1907. The intensification of the movement during these years gave a considerable impetus to the cotton manufacturing industry, and as the yarn trade with China was not then profitable, attention was naturally turned to the installation of more looms in the mills, so that the yarn spun in the mills might be turned into piece-goods instead of being exported to China. In 1907 there were large failures of commercial houses, particularly in Bombay, consequent on the heavy fall in the prices realised for yarn in China, the fall in demand from that country following a famine, and violent fluctuations in the silver exchange. The next three years saw the industry passing through a difficult period accentuated by the enhancement of the duty on silver. The adverse conditons persisted with brief spells of partial recovery until 1917 when the boom arising from the Great War set in, which lasted up to the year 1922.

Abolition of Excise Duty.—This boom was followed by a period of severe depression, especially in Bombay. This depression, combined with the growing severity of Japanese competition in the home market, assisted as it was by inferior labour conditions, led in the years following 1923 to a renewed agitation for the repeal of the cotton excise duty. In August 1925, a deputation from the Bombay and Ahmedabad Millowners' Associations waited on His Excellency the Viceroy. The situation worsened in the following months, and in December 1925, the excise duty was suspended, and it was finally abolished in March 1926.

Tariff Board Enquiry.—A special Tariff Board was appointed soon after to enquire into the position of the industry, the causes of the depression, the extent to which it was due to foreign competition and the necessity or desirability of protection. The Board found that the difficulties of the industry were mainly due to the unfair advantage which Japan enjoyed owing to the adoption of the double shift system and the employment of women and children at night. The Board, however, presented a majority and a minority report. Government were unable to accept the recommendations made, but as a measure of partial relief, they removed the import duties on mill stores and textile machinery.

The general disappointment felt at Government's decisions on the Tariff Board's recommendations and the grave crisis which then faced the industry were brought to the notice of His Excellency the Viceroy by a deputation of millowners from all parts of the country which waited on His Excellency on 12th July 1927. As a result of this deputation, Government revised their original decisions and imposed a minimum specific duty of 1½ annas per pound on imported yarns with effect from September 1927, for a period of three years. By the end of this period, although labour conditions in Japan had improved, a new danger had arisen in the shape of a large import trade from China where labour conditions were far inferior to those in India. The protective duty was, therefore, extended for a further period of three years ending on the 31st March 1933.

Protection to Cotton Industry.—The utter inadequacy of the protection extended to the industry by the Yarn Protection Act of 1927 was abundantly evidenced by the increasing imports of piecegoods from Japan in the following years. On 22nd July 1929, on the suggestion of the Bombay Millowners' Association, Mr. G. S. Hardy was appointed by Government to examine the possibility of substituting a system of specific duties for the then existing system of *ad valorem* assessment. Mr. Hardy's conclusions, which revealed that Japanese competition was extremely severe in certain classes of goods manufactured in India, were discussed at a conference of millowners convened by the Government of India towards the end of 1929, and in February 1930, Government introduced in the Legislative Assembly the Cotton Industry (Protection) Bill, which, as finally passed, provided for a change in the then existing revenue duty of 11 per cent. to a protective duty of 15 per cent. in the case of British cotton piece-goods and of 20 per cent. in the case of foreign goods, with an alternative minimum specific duty in either case of 3½ annas per pound on plain grey goods. For revenue reasons, these *ad valorem* rates were raised by 5 per cent. in March 1931, and a surcharge of 25 per cent of the enhanced duties was imposed in October of the same year, bringing the rate of duties to 25 per cent. (British) and 31¼ per cent. (foreign) with a minimum specific duty of 4⅜ annas per pound on plain greys. At the same time, an import duty of 6 pies per pound on all raw cotton and of 10 per cent. on machinery and dyes used by the industry was also levied. The duty on raw cotton was raised in 1939, again for reasons of revenue, to one anna per pound.

Early in 1932 Government directed the Tariff Board to enquire into the question of the grant

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of substantive protection to the industry. In the meantime the depreciation of the Japanese exchange, consequent on Japan's going off the Gold Standard in 1932, enabled her to place her piece-goods on the Indian Market at abnormally low prices, and offset to a very great extent the protection conferred on the Indian Industry by the 1930 Act. Government, therefore, directed the Board to hold a special enquiry into this question, and in accordance with the recommendations of the Board, the duties on foreign piece-goods were raised from August 1932, to 50 per cent. or 5¼ annas per pound, whichever was higher, but in view of the continued severity of the Japanese competition, Government once again found it necessary in June 1933 to raise the level of the duty on foreign piece-goods to 75 per cent. *ad valorem* or 6¾ annas per pound. At the same time notice was also given of Government's intention to abrogate the Indo-Japanese Trade Convention of 1904.

British & Japanese Trade Delegations.—This was followed by the arrival in India of an official Delegation from Japan and an unofficial Trade Delegation from the United Kingdom. The United Kingdom unofficial Delegates' deliberations with Indian millowners culminated in what has been termed the Mody-Lees Pact of 1933, an understanding which was to be in force until the end of 1935. Similar discussions between certain unofficial delegates from Japan and Indian millowners proved abortive, but the efforts of the Japanese official delegates resulted in a fresh Convention and Protocol being agreed to early in 1934, under which a link was established between the exports of Indian raw cotton to Japan and the imports of cotton piece-goods from Japan. Japan agreed to take one million bales of Indian raw cotton in return for the right to export 325 million yards of cotton piece-goods to this country, with a maximum limit of 400 million yards for an aggregate offtake of 1¼ million bales of Indian raw cotton. Japan was also accorded most-favoured-nation treatment in respect of her miscellaneous trade. In virtue of the terms of the Protocol, the duties on Japanese cotton piece-goods were reduced, with effect from 8th January 1934, to 50 per cent. *ad valorem* with a minimum specific duty of 5¼ annas per pound on plain grey goods.

The protective duties on cotton yarn and piece-goods imposed by the Cotton Textile Industry (Protection) Act, 1930, were due to expire on 31st March 1933, but as Government were not able to complete their consideration of the report of the Tariff Board of 1932 (which had recommended the institution of specific duties based on weight subject to their being combined with alternative *ad valorem* duties to prevent a loss of revenue and the imposition of a duty of one anna per pound in the case of yarns below 50s count) before that date, they extended the provisions of the Act for another year.

Textile Protection Bill.—The Cotton Industry (Textile Protection) Bill of 1934 sought to give effect to the recommendations of the Tariff Boards on the cotton and sericultural industries in the light of the Indo-Japanese Protocol and the unofficial agreement entered into between Indian and Lancashire millowners. So far as yarn was concerned, the Act, as passed, fixed the rates of duties at 5 per cent. (British) and 6¼ per cent. (non-British) with a corresponding alternative minimum specific duty of 1¼ annas and 1⅞ annas per pound on counts up to and including 50s. In the case of piece-goods, the levels of the duties were fixed at 25 per cent. and 50 per cent. on British and non-British goods respectively, with a minimum specific duty of 4⅜ annas and 5¼ annas per pound on plain grey goods. The Act also guaranteed protection to the Industry for a period of five years ending March 1939, but recognized the need for an examination of the scale of duties on two occasions: firstly on the expiry of the Mody-Lees Pact at the end of 1935, and secondly, at the end of the Indo-Japanese Protocol in March 1937. Accordingly, at the end of 1935, Government directed the Tariff Board to examine the adequacy of the then existing levels of duty on British goods. Accepting the recommendations of the Board, Government reduced, with effect from June 25, 1936, the duty on all United Kingdom cotton piece-goods, with the exception of prints, to 20 per cent. *ad valorem* with a minimum specific duty of 3½ annas per pound on plain grey goods.

Textile Trade Agreement.—The Indo-Japanese Trade Protocol was subsequently renewed for a further period of three years ending March 1940, without any material modification in the rates of duties applicable to Japanese cotton piece-goods. With the separation of Burma from India in April 1937, however, the basic quota of cotton piece-goods for India was reduced to 283 million yards, rising to a maximum of 358 million yards, leaving a margin of 42 million yards for Burma.

The negotiations between the Government of India and His Majesty's Government in the United Kingdom for the conclusion of a new Trade Agreement in replacement of that entered into at Ottawa in 1932 were brought to a conclusion early in 1939, and the new Agreement specifically provided for a reduction of the basic rates of duties on United Kingdom cotton piece-goods as under :—

Printed goods ..	17½%	*ad valorem.*
Grey goods ..	15 %	*ad valorem* or As. 2-7½ ps. per lb., whichever is higher.
Others	15 %	

The basic rates were subject to a reduction of 2½ per cent. if imports from the United Kingdom in any year were less than 350 million yards and to an increase to the same extent in the event of United Kingdom imports exceeding 500 million yards. The new rates of duty came into force on April 1, 1939. In the year 1939-40, the European War affected imports from the United Kingdom, and as her sendings of piece-goods did not exceed 350 million yards, the duties on all classes of British piece-goods were reduced by 2½ per cent. with effect from April 17, 1940.

The following table shows at a glance the progress made by the Indian Cotton Mill Industry during the last forty years :—

‡ Excludes Burma and Ceylon.

It may be mentioned here that there has latterly been much greater expansion of the Industry in the Indian States than in the British Indian Provinces owing to certain advantages possessed by the former, *e.g.*, lower taxation, less rigorous labour laws and other facilities granted by the State Governments.

The following statement shows the quantity (in pounds) of yarn of various counts produced in Indian mills during the last five years :—

Statement of the Quantity (in pounds) of Yarn spun by Indian Mills according to counts.

	1935–36.	1936–37.	1937–38.	1938–39.	1939–40.

Fine Count Yarn.—Substantial progress has been made in the last few years in the direction of spinning fine count yarn. Much however, remains to be accomplished; but the duty of one anna per pound which Indian mills have, now to pay for long staple cotton imported from abroad is a factor which is likely to hamper more rapid progress.

The statement below shows the total quantities of woven goods manufactured in Indian mills during the same years:—

	1937-38.	1938-39.	1939-40.
	Yds.	Yds.	Yds.
Grey & Bleached goods	3,190,647,592	3,337,129,086	3,086,318,074
Coloured Piece-goods	893,628,971	932,140,413	926,210,951
Grand Total ..	4,084,276,563	4,269,269,499	4,012,529,025

Here again, it may be pointed out that Indian mills are now turning out increasingly larger quantities of fine Dhoties, Cambrics and fine Longcloth on the lines recommended by the first Tariff Board (1927).

Textile Industry and the War.—After a continuous period of almost unrelieved gloom extending over a period of nearly two decades, culminating in measures being actively explored with a view to bringing about an organized curtailment of production throughout the country, the war in Europe which commenced in September 1939 opened up the prospect of a spell of comparative prosperity for the industry. Many of the Empire and neutral markets, which used to receive their supplies of textiles from the belligerent countries, were cut off from their previous sources of supply, with the result that these countries were increasingly forced to look to India for the satisfaction of their textile requirements. The war also made increased demands on the Indian industry for the clothing needs of the Defence Forces of the Empire and its Allies. Reference may, in this connection, be made to the deliberations of the Eastern Group Conference held in Delhi in October/November 1940, for the purpose of concerting measures for making the countries of the Eastern Group of the British Empire as far as possible self-supporting for war supply purposes; and to the outstanding position occupied by the Cotton Mill Industry of India for the satisfaction of the textile requirements not only of the defence services but also of the civil markets of the participating countries.

The table below sets out the exports of cotton twist and yarn from India to her chief export markets in the two immediate pre-war years and in the first year affected by the present conflict:—

Exports of Cotton Twist and Yarn from British India.

	1937-38.	1938-39.	1939-40.
	lbs.	lbs.	lbs.
To United Kingdom	1,030,011	182,238	2,660,462
Burma	8,869,524	12,442,644	15,236,664
Straits Settlements	3,706,368	5,537,768	3,189,755
Hongkong	7,301,822	8,168,448	5,265,902
Syria	3,047,338	3,400,400	2,213,400
Others	16,169,292	8,228,101	8,376,600
Grand Total ..	40,124,355	37,959,599	36,942,783

In relation to the world cotton textile industry, the Indian Industry ranks second from the point of view of the volume of cotton consumed, and fifth in point of spindles and looms installed. The position of the Mill Industry in the national economy of India will be evident from the fact that, at the present time, it consumes more than 50 per cent. of the total Indian cotton crop, directly gives employment to about 600,000 workers, and affords subsidiary employment to large numbers of persons who are engaged in various trades which directly depend for their existence upon the Cotton Mill Industry.

Hand Weaving Industry.—It has been estimated that there are about 2½ million hand-looms spread throughout the whole of the country, and that the number of dependents who rely in some measure upon this industry for their support is somewhere near ten millions, a number greatly in excess of that supported by any industry except agriculture. The annual production of cotton goods on handlooms is estimated at nearly 2,000 million yards. The economic position of the cottage handloom weaver in India has, for a number of years, been receiving the attention of the Government of India and Provincial Governments. For some years, financial assistance has been granted to Provincial Governments from central revenues for the purpose of improving the cottage industry's organisation and producing and marketing methods. Despite this assistance, the industry is reported to be in a depressed condition, and various suggestions have been made from time to time from various quarters to remedy the situation. All these proposals were carefully examined at a conference convened by the Central Government in December 1940, at which it was decided to set up a Fact-Finding Committee for the purpose of ascertaining complete factual data concerning the handloom weaving industry, as a preliminary to concerting measures for the purpose of assisting the cottage weaver.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now about 5,500 tons a day of 10 working hours, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits on Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 15 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872–73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874–5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions.—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

The record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows the number of Mills, capital invested, number of looms and spindles employed in the industry in the various Provinces from 1928-29 to 1937-38 :—

Province.	No. of Mills.	Authorised Capital Rs., £, and $	Paid-up Capital Rs., £, and $	Number of Looms.	Number of Spindles.
Bihar	3	Rs. 62,00,000‡	Rs. 39,00,000‡	879	18,080
Bengal..	96(*b*)	23,38,42,000(*a*) £3,175,000 $3,750,000	19,36,51,140(*a*) £2,525,000 $2,750,000	64,124	1,278,866
Madras	2	15,05,000(*d*)	15,05,000(*d*)	805	21,664
United Provinces	3	68,00,000	33,49,500	787	17,728
Central Provinces and Berar (*c*)	1	5,00,000	5,00,000	110	1,620
Total, 1937-38	105	24,88,47,000 £3,175,000 $3,750,000	20,29,05,640 £2,525,000 $3,750,000	66,705	1,337,958
Totals 1936-37	104	24,42,47,000 £3,175,000	20,21,52,480 £2,525,000	65,273	1,300,077
1935-36	104	24,11,47,000 £3,175,000	19,97,07,038 £2,525,000	63,724	1,279,460

Jute and Jute Manufactures.—(Rs. 68,42 Lakhs.)—The total exports of raw and manufactured jute during the year 1939-40 amounted to 1,651,000 tons as compared with 1,647,000 tons in 1938-39, showing an increase of 4,000 tons or 0·2 per cent. There was, however, a greater increase in the value of these shipments which advanced from R .39,66 lakhs to Rs.68,42 lakhs or by 73 per cent. It may be noted that the prices of jute and jute manufactures during 1939-40, particularly in the latter half of the year, were much higher than in the preceding year. The following table shows the exports of raw jute and manufactured goods during the past five years :—

——	Exports of raw jute.	Exports of sacking bags and cloth.	Exports of hessian bags and cloth.
	Tons (000)	Tons (000)	Tons (000)
1935-36 ..	771	438	354
1936-37 ..	821	519	488
1937-38 ..	747	523	478
1938-39 ..	690	488	450
1939-40 ..	568	510	546

Exports of raw jute declined in quantity from 690,000 tons in 1938-39 to 568,000 tons in 1939-40, or a decrease of 18 per cent., while the value advanced from Rs.13,40 lakhs to Rs.19,73 lakhs, showing a rise of 47 per cent. The United Kingdom and France increased their purchases from 181,000 tons and 76,000 tons to 194,000 tons and 85,000 tons, respectively. Most of the other principal European countries reduced their takings in 1939-40. Exports to Germany, Belgium, the Netherlands and Italy fell from 132,000 tons, 51,000 tons, 13,000 tons and 46,000 tons to 35,000 tons, 33,000 tons, 7,000 tons and 28,000 tons, respectively; while the U.S.S.R. and Czechoslovakia were practically out of the market in 1939-40, their respective purchases in the preceding year being 19,000 tons and 21,000 tons. Shipments to Spain and Sweden, however, rose from 11,000 tons and 7,000 tons to 16,000 tons and 8,000 tons, respectively. There were also increased shipments to the American countries. The United States of America took 51,000 tons as against 31,000 tons; the Argentine Republic, 16,000 tons as against 10,000 tons and Brazil, 34,000 tons as against 25,000 tons in 1938-39. Exports to Japan declined from 15,000 tons to 14,000 tons, while those to China and Australia rose by 2,000 tons and 1,000 tons to 8,000 tons and 3,000 tons respectively. Manchuria, which was responsible for 13,000 tons in 1938-39, took only 1,000 tons in the year under review.

As might be expected from the withdrawal of restrictions on mill production coupled with war demand for sand bags, the consumption of raw jute in Indian mills recorded an improvement in 1939-40 as compared with the preceding season. The following table shows the exports and Indian consumption of raw jute during the last five seasons, July to June :—

——	Exports of raw jute.	Consumption in India*	Excess of consumption over exports (%).
	Tons (000)	Tons (000)	
1935-36 ..	740	895	+21
1936-37 ..	872	1,082	+24
1937-38 ..	666	1,194	+79
1938-39 ..	693	1,112	+60
1939-40 ..	528	1,274	+141

* Figures refer to mills in the membership of the Indin Jute Mills Association.

Exports of jute bags and cloth in the past three years were as under :—

——	1937-38	1938-39	1939-40.
Bags (in millions)	612	598	1,210
Cloth (in million yards)	1,643	1,550	1,560

The number of gunny bags shipped more than double in 1939-40 and totalled 1,210 million as compared with 598 million in the preceding year. The value also showed a similar rise and amounted to Rs.25,44 lakhs as against Rs.12,46 lakhs in 1938-39. Of the exports in 1939-40, sacking bags accounted for 465 million valued at Rs. 16,77 lakhs and hessian gunny bags, 746 million valued at Rs. 8,66 lakhs. The United Kingdom always the principal purchaser of gunny bags, multiplied its takings nearly tenfold to the colossal figure of 685 million (more than the usual total exports to all countries combined) owing to the war demand for sand bags. Exports to other European countries taken together totalled 21 million in number as compared with 36 million in 1938-39. Next to the United Kingdom, the largest single purchaser of Indian gunny bags was Australia which took 71 million bags in 1939-40 as against 66 million in the preceding year. Burma came next with 52 million as compared with 62 million in 1938-39. Java, Thailand and Indo-China increased their takings from 23 million bags each to 30 million, 25 million and 26 million, respectively. The Straits Settlements required 11 million bags in 1939-40, or 5 million bags more than in the preceding year. Exports to the African territories were also higher than in 1938-39. The Union of South Africa took 38 million bags as against 28 million in 1938-39; Egypt 29 million bags as against 22 million; the Portuguese East Africa 20 million as against 16 million, and the West African territories, *e.g.*, Nigeria, Gold Coast, etc., taken together, required 21 million bags as against 13 million in the preceding year. Exports to the United States of America rose from 11 million bags to 12 million bags. There were also increased shipments to the West Indies, including Cuba, Peru, New Zealand and Hawaii, while those to Chile recorded a decline. Exports to the Argentine Republic remained fairly steady at 2 million bags.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The total exports of gunny cloth rose from 1,550 million yards valued at Rs. 13,34 lakhs in 1938-39 to 1,560 million yards valued at Rs. 22,40 lakhs, of which hessian gunny cloth represented 1,515 million yards valued at Rs. 21,53 lakhs as compared with 1,507 million yards valued at Rs. 12,83 lakhs in the preceding year. As usual, the United States of America was the best customer of gunny cloth but, owing to higher prices, she had to curtail her purchases from 841 million yards in 1938-39 to 764 million yards in 1939-40. Exports to the Argentine Republic also declined from 291 million yards to 217 million yards. There were, however, increased shipments to the United Kingdom and Canada which amounted to 260 million yards and 134 million yards as against 171 million yards and 89 million yards, respectively, in 1938-39. Australia took 41 million yards against 31 million yards; the Union of South Africa, 19 million yards against 10 million yards; Egypt, 16 million yards against 9 million yards and Uruguay, 14 million yards against 6 million yards in the preceding year. Exports to Eire, the Straits Settlements and New Zealand also recorded increases, while those to Norway and Turkey showed decreases. Table No. 32, appended to this Review, shows the details of exports of jute bags and cloths to which a reference may be made.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1290. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. It is about 20 years now that the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent. of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent. of the total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not instal any extra productive machinery or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent. of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent. of looms being unsealed on 1st May 1935, 2½ per cent. on 5th August and 2½ per cent. on 11th November. The remaining 5 per cent. of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Premchand, Craig, Waverley, Megna and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mills were at liberty to work whatever hours and install, whatever machinery they desired; in 1938 the position was reviewed and a new short time working agreement was proposed to take effect from the 15th March 1939, whereby member mills agreed to hours of work which would not be less than 40 nor greater than 54 per week. A supplementary agreement was entered into with effect from the 31st July 1939, by which the mills worked 45 hours per week with 20% Hessian and 7½% Sacking looms sealed. This was the position at the outbreak of the present war, after which large government orders for sandbags and a heavy overseas demand necessitated increased production; the restriction on working hours was withdrawn and all mills went into full production at 60 hours per week. This was an emergency arrangement that came into effect from about the middle of November 1939 to cope with the British Government orders, for which provisions in the Factories Act regarding working hours had to be relaxed. After a few months however, it was realised that as a result of the small offtake of sand bags and difficulties in obtaining shipping facilities, the mills were producing more goods than there was demand for. To meet this situation the working hours of the mills were reduced to 54 per week from the 8th April 1940. This arrangement continued up to August, but the mounting of stocks made it clear that this could not continue after the sand bag orders were completed. From 19th August 1940, mill working hours were further curtailed to 45 per week. This too did not have the desired effect on the stock position and the Indian Jute Mills Association decided to close their mills for one week in each month from September 1940 up to the end of the year.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notice of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave the required notice and the agreement terminated on the 31st March 1936.

Indian Central Jute Committee.—A Central Jute Committee has been constituted by the Government of India with 26 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture, which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

The functions of the Committee include agricultural, technological and economic research, the improvement of crop forecasting, of production, of testing, and of distribution of improved seed; enquiries and recommendations relating to banking and transport facilities and transport routes; improvement of marketing in the interests of the jute industry: and collection and distribution of all relevant information on Jute.

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it.

The Offices of the Committee are situated at 4, Hastings Street, Calcutta. *President (Ex-officio)*: P. M. Khareghat, C.I.E., I.C.S., (Vice-Chairman, Imperial Council of Agricultural Research); *Secretary*: D. L. Muzumdar, M.A. (Cal.), B.A. (Cantab), I.C.S.

Agricultural Research.—The Agricultural Research Laboratories have been built on the Manipur Farm of the Director of Agriculture, Bengal, at Dacca, and have been in full working order since June 1939. The staff there have completed a survey of previous work on jute in the agricultural field and have made satisfactory progress with their research programme. An important part of this work is the study of fungal and insect pests, including the comparative resistance of various strains of jute and the effect of various manurial treatment on resistance.

The analysis of retting water from various districts is also in progress with the object of ascertaining which types of water yield the best results. A microscopic study of the formation of the fibre, its structure and development, stage by stage, has also been carried out.

Technological Research.—The Technological Research Laboratories at Tollygunge have made considerable progress with spinning tests under standard conditions of temperature and humidity and when sufficient data have been collected, it will be possible to judge very accurately the value of the fibre and its suitability for use in various types of yarn. A study is being made of the various measurable chemical and physical characters of the fibre and their relation to spinning quality, which will lead towards the establishment of scientific methods of grading.

In co-operation with the Indian Jute Mills Association experiments have been made to find out the moisture content of various types of jute in equilibrium with atmospheres of various relative humidities. The result of this combined effort will, it is hoped, give the information required for specifying acceptable standard figures for moisture regain.

Estimates are consideration for the necessary extra equipment and accommodation to carry out experiments on the spinning of fine jute yarns and yarns of jute blended with other fibres, such as flax, and also on weaving, in the hope of discovering new and extended uses for jute goods.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The programme of work to be carried out in the laboratories includes examination of typical samples representing the various physical and chemical characters and trade classifications. In the spinning laboratories an attempt will be made in the beginning to determine the minimum size of sample which will give reliable information regarding spinning behaviour and yarn quality. It is also proposed to have an investigation at an early date of the influence of certain valuable factors (machine speeds, etc.), on yarn quality in order that the degrees of control necessary in the various operations of a standard process may be determined. When this has been done, a standard process suitable for comparing the quality of small samples of fibre will be available, and it will be possible to proceed with the work of correlating spinning quality with measurable characters and the testing of new strains, etc.

One of the main functions of the technological research scheme is the testing of strains of jute produced by the agricultural research staff of the Committee and samples received from other sources.

Marketing and Transport.—The Committee's marketing section has collected extensive information regarding the marketing and transport of jute. The first report has been published and well received, the second has been completed and awaits publication. The latter, like the first, will prove interesting and instructive reading.

Jute Forecast.—Work on the Jute census is well advanced. The results of the random sampling survey of eight districts in Bengal planned for the 1940 crop have been satisfactory, and most of the information necessary for the carrying out of a full provincial survey on the 1941 crop has been obtained. A yearly survey on these lines may be contemplated with the hope that it will provide much more accurate estimates of the crop than the present official forecasts.

Economic Research and Publicity.—The Indian Central Jute Committee has concluded an arrangement by which the newly appointed Indian Trade Commissioner to the United States of America supplies the Committee with periodical reports on all points bearing on the consumption of jute and jute goods in the North American Continent. Similar arrangements, when the war situation improves, are likely to be made to obtain information from Europe, South Africa, Australia, and the Far East. A correspondent has already been appointed in the Argentine for this purpose.

The purpose of the Committee's scheme for the collection and distribution of statistics and information regarding jute is to collect and make available to the various interests concerned as much reliable information as possible on the production and consumption of jute and its products.

A bulletin, the annual subscription of which is Rs. 5, or 8s. (postage extra), is published monthly containing figures on the production, consumption, prices, stocks, imports and exports of jute and jute manufactures, and also information regarding the prices and utilisation of jute substitutes. It also includes items relating to export and import restrictions imposed on various countries and other information regarding the economics of jute and its competitors, as well as general information of interest to the trade. The Committee also disseminate information to the grower to assist him towards improved methods of growing and retting, and getting better prices for his crop.

Indian Iron and Steel Industry.

Less than thirty years ago the iron and steel industry on a modern scale was non-existent in India. To-day India has practically reached self-sufficiency in the more widely used forms of steel. It is now a vital, national, basic and defence industry. The last war proved its usefulness; the present war has confirmed its indispensability.

History of Iron and Steel in India.—India has known iron and its uses since some four to five thousand years before the Christian era. In 1836 Josiah Heath stated that India's claim to the discovery and uses of this metal was beyond doubt. The famous 'Iron Pillar' of India, well known to all visitors to Delhi, is estimated to be about 1,500 years old. Considerable skill must have been exercised in welding and shaping this Pillar which is over 23 ft. in length, weighs approximately 6 tons and varies from 12¼ to 16¼ inches in diameter.

The manufacture of steel has been known in India for over 1,000 years. Damascene or Wootz sword or dagger blades of genuine Indian manufacture can still be obtained in Northern India. These weapons or the metal from which they were produced were obtained by Persian traders centuries ago and exported to and via Damascus. It happened, however, that the Indian steel makers never overcame certain difficulties and did not progress with the times.

The first recorded efforts to found an iron and steel industry on modern lines were those of Mottee and Farquhar in 1779. In 1825 Josiah Heath of the Indian Civil Service, Madras, resigned his appointment in order to establish an iron and steel works in that province. The charcoal furnaces installed by him at Porto Novo resulted in complete failure owing to financial difficulties and lack of practical experience, and the East India Company, who acquired his derelict works and formed a new Company in 1853, did not achieve any commercial success and ceased operations in 1874.

The next undertaking was started by Messrs. Jessop & Co. which finally resulted in the erection of the Barakar Iron Co. at Kulti in 1875. After passing through several vicissitudes, it passed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

into the hands of the Barakar Iron & Steel Co. in 1887. In 1889, the plant was modernized and it became known as the Bengal Iron & Steel Co. A steel plant started in 1905 closed within a year as the orders received could not be supplied at economic rates. Since 1919, this company has been known as the Bengal Iron Co.

The credit for the first successful attempt to manufacture steel in India on a commercial scale goes to The Tata Iron & Steel Co. Ltd., and it is to the genius, perseverance and foresight of Jamshedji Tata, the great pioneer of India industry, and his sons, that The Tata Iron and Steel Co. owes its origin and development. It owns valuable iron ore concessions, manganese ore deposits, limestone, dolomite, coal, magnesite and chromite, scattered over India.

Other important steel companies were subsequently started in Bengal and Bhadravati in Mysore. The first production of pig iron was made in 1811, and of steel in 1912. There has been continuous development and The Tata Company now produces more iron and steel than any single firm in the British Commonwealth.

Owing to the restrictions imposed by Government, it is not possible to give particulars about the plant at the various steel works, their capacity, the output of the different kinds of steel, or any other detail as those would be of use to the enemy.

Raw Materials.—Of the raw materials required by the iron and steel industry, the three most important are iron ore, coking coal and limestone and dolomite for fluxing purposes.

Iron Ore.—On account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60% and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces. Large deposits of high grade ores are limited to a few areas of which only three field-require special mention :

(*i*) *Mysore.* There are big deposits of quartz —magnetite ore in Mysore but they are of low-grade and would require concentration before using them. The ores used in the Bhadravati Iron Works can be compared to Singhbhum ores containing about 60% Fe. and the quantity available may be put at 30 million tons.

(*ii*) *Goa.* Large quantities of ores are available near Goa. Though the grade is good, the ores are soft and require either sintering or briquetting and bagging before despatch.

(*iii*) *Singhbhum and Orissa.* In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring Orissa Feudatory States, there exists some of the richest iron ore deposits in the world. The iron ore content is nearly 60%, and these deposits are estimated to contain about 3,000 million tons, which are sufficient for the iron and steel requirements of India for nearly 1,000 years. In other parts of the world equally rich iron ore may be found but it cannot always be landed at the iron works at anything alike the same cost. The advantage India possesses in the shape of iron ore is, therefore, very great.

Coal.—Nature has not been so bountiful to India in respect of its coal resources. The most important coal measures in India are (*i*) the Gondwana (Permian) coalfields of the Peninsula, such as Raniganj, Jharia, etc., and (*ii*) the Tertiary coalfields of Assam, the Punjab and Baluchistan. Taking only seams with a thickness of more than 4 feet and ash content below 20% and those occurring within a depth of 2,000 feet only, the Indian coal resources have been estimated to be of the order of 24,000 million tons. Out of this, good quality coal, with less than 18 per cent. ash content, is estimated to amount to only 6,000 million tons and coal capable of yielding coke of metallurgical quality to only about 1,400 million tons, which is found in the Gondwana (Permian) coal fields of the Damodar basin.

More than 1,000 million tons of strongly coking coal with less than 8% ash, but high in sulphur, occur in the Tertiary coalfields of Assam, but these are not at present considered useful for metallurgical purposes.

The manufacturers of hard coke in India rely on the Jharia coalfields to an overwhelming extent to meet their requirements. With the present wasteful means of extracting coal and the use of metallurgical coal for non-metallurgical purposes, some experts consider that the coking coal resources of the Jharia field will not last for more than 30 years. The Indian Coal Mining Committee reported in 1937 that these reserves would last for about 57 years.

If the Government and the coal industry co-operate and adopt adequate measures for improved methods of mining coal and conserving and economising the use of metallurgical quality coal, the life of these reserves will be extended beyond the gloomy prognostications referred to above.

In addition, it might become possible in the future, as the result of technical research, for the iron and steel industry to use coals not regarded as coking coals at present, by blending them with strong coking coals.

While the reserves of coking coal in India are not adequate for melting the huge quantity of iron ore available, frequent repetition of this statement has produced an impression abroad that adequate raw materials are not available in India for a large scale iron and steel industry, which is entirely a mistaken view. The metallurgical industry has taken its own precautions to prevent the speedy exhaustion of its coking coal reserves. It is unfortunate that so much of India's best coking coal is still being used for steam raising purposes but we can confidently hope that this practice will tend to diminish in the near future.

The coal fields and the iron ore deposits are situated within a short distance of one another and there are ample supplies of limestone and dolomite within a reasonable distance of other raw materials.

Importance of the Industry in the National Economy.—The total capital invested in the iron and steel industry in India is estimated to be about Rs. 25 crores. Roughly 150,000 men and women are employed directly and indirectly in the Indian iron and steel industry, the re-rolling mills and the auxiliary enterprises. Including their dependents, the total number of people dependent on the industry in India is about 600,000. The industry is contributing to the Government and the public revenues between Rs. 6 to 7 crores per annum by way of excise and customs duties, income and super taxes.

Development.—The last decade has seen a great expansion of the iron and steel industry in India accompanied by improvement in the various processes and the application of scientific methods of control. The successful development on a commercial scale of the rapid dephosphorising process and the making of acid steel out of Indian basic pig iron, for both of which full credit is due to the Tata Iron & Steel Company Ltd., may be regarded as the most important advance in steel making practice that the young Indian steel industry has made. It is likely to have far reaching effects on the establishment of several new industries in India such as locomotive manufacture, and the manufacture of railway wheels, tyres and axles for which acid steel is specified. The development and manufacture of a low alloy high tensile steel containing copper and chromium known as Tiscrom is another instance. The steel is being employed for the construction of the New Howrah Bridge.

Besides metallurgical research, fuel research, chemical research and research in refractories are being pursued in India.

The Paper Making Industry.

Paper making in India is of some antiquity. The manufacture by hand had been practised from quite early times. The first paper-making machine in India was erected and operated by a famous missionary, Dr. William Carey, over a century ago at Serampore on the Hooghly River near Calcutta, but the establishment of paper making as a modern industry may be said to date from 1867. In that year the Royal Paper mill was established at Bally, only a few miles away, using in the first instance Dr. Carey's original plant and machinery. About 15 years later the Upper India Couper Paper Mill at Lucknow and the Titaghur Paper Mills at Titaghur, near Calcutta, were started. Other mills at Raneegunge and Kankinara, in Bengal and other Provinces soon followed. Production began to increase, so that by about 1900 the total made annually in India amounted to approximately 20,000 tons.

To-day the quality of paper produced by Indian mills is accepted as equal to that of most imported paper of the same class, and the range of qualities has been extended to include coloured banks and bonds, tub-sized rag papers, embossed covers and writings, supercalendered tinted printings, and imitation art and kraft.

Raw Materials.—In its early days the Indian industry considered the manufacture of high class white paper rather beyond its capacity, and this was to some extent due to its dependence upon rags and waste paper for its raw material. But this crude practice was soon to change. Routledge in 1860 proved the virtues of esparto—a semi-tropical grass—and in 1875 and 1879 reported upon the possibilities of Indian bamboo which served to draw attention to other Indian fibres. There are only incomplete records of the early experiments with Indian fibres, but it is known that two mills made use of Mooni (*Saccharum Moonja*) and Sabai (*Ischaemum Angustifolium*) in their first years. Mooni seems to have held the field in the beginning, for it made a very good paper. Sabai, however, presented less difficulty as regards treatment, and, therefore, soon came into universal favour among Indian mills. Having found in Mooni and Sabai ample resources of plant fibre it was perhaps natural that the Indian mills then in operation should at that time have made no effort to follow up Routledge's researches in bamboo—a much more difficult problem. Possibly India might have come to the front as one of the world's most important producers of pulp and paper. What actually happened was that the industry based on Sabai grass, while relatively still in its infancy, was almost put out of business by the competition of wood pulp. Nevertheless in bamboo it later found a new raw material of great value.

The Bamboo Paper Industry (Protection) Act of 1925 not only gave Indian mills an opportunity of repairing the damage to their plant and machinery caused by the incessant and intensive work required by India's war demands, and of overcoming the difficulties of getting stores and machinery replacements, but also encouraged and enabled them to develop bamboo pulp as their main fibre. The protective tariff on paper was renewed by the Government of India on the recommendation of the Tariff Board in 1932, and imported wood-pulp was also made subject to a duty of Rs. 45, or approximately £3 a ton. This pulp duty naturally had the direct effect of preventing the establishment of new paper mills designed to work only on imported wood-pulp. The mills, therefore, immediately began to develop and increase the production of bamboo pulp, which had already been proved to be eminently suitable for all the usual classes of fine writing and printing papers, banks, ledgers, &c. Sabai grass, which is the Indian equivalent of esparto, having its own special characteristics, is also used by some of the mills, but bamboo pulp is now the main material. Incidentally the manufacture of pulp from bamboo is at present practically exclusive to India.

The protective tariff attracted others to a profitable field of industry, and there are at present 13 paper mills operating 28 machines with a total production of nearly 85,000 tons.

Experimental work.—For many years the paper pulp section of the Forest Research Institute at Dehra Dun has been carrying out experimental work in connection with the development of new fibres for paper-making,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and it has been reported that considerable success has been obtained in making kraft paper from bamboo pulp. Two paper Mills in India have been successfully manufacturing, for over a year, kraft papers from bamboo.

Newsprint.—The whole of India's newsprint requirements (nearly 45,000 tons yearly) is imported, it being not possible so far to produce it in the country on an economical basis owing to the lack of the necessary raw materials. Recent enquiries show that the Kashmir and Tehri-Garhwal States can supply fir and spruce in quantities sufficient for the establishment of a newsprint mill in each of the two states. The two species of woods are well known raw materials for the production of mechanical pulp for use in newsprint manufacture and the suitability of both the species from the two States has recently been tested at the Forest Research Institute, Dehra Dun. Enquiries are in progress in connection with the maturing of projects for the manufacture of newsprint from the two species of woods available in the two states. The abnormal rise in the costs of machinery and the difficulties of importing these from abroad, however, appear to be serious handicaps in the early materialisation of the projects.

The Institute has also been investigating the possibility of finding a substitute for the 50,000 odd tons of "overissued" newspapers imported from abroad for use as wrapping paper for articles in the bazar, and even here it has so far been difficult to produce at a cost relatively near that of the latter.

Experiments have been carried out at the Forest Research Institute on the production of wrapping papers from *ulla* grass (*Anthistiria gigantea*). This grass is available in large quantities in the United Provinces. The quality of the *ulla* grass wrapping papers, produced at the Institute, was far superior to that of the "overissued" newspapers and of the brown wrappings, made in India or imported from abroad. The difficulties of importing machinery from abroad at prices which the industry can bear have, however, stood in the way of the materialisation of any project for the manufacture in the United Provinces of wrapping papers from *ulla* grass.

The industry has made such headway in recent years that the outbreak of the present war found it ready to take up the vastly increased demand for Indian paper brought about by the difficulty of importing from abroad. At the present time imports of fine papers have practically stopped and Indian mills are working to full capacity. The emergency has undoubtedly given the newer mills an excellent opportunity of establishing themselves.

The full effects of the war on Indian conditions and particularly on production have not yet been felt, because the outbreak of hostilities found most of the mills carrying large stocks which provided an alternative supply of paper to consumers who found themselves cut off from the sources from which they usually obtained their requirements. These stocks have, however, been worked off by now. Consumption has not only increased but it shows in addition a tendency to concentrate on more expensive kinds of paper, because those who formerly relied on cheap qualities of paper containing mechanical pulp, finding themselves unable to obtain supplies at a reasonable price, are using instead paper of the type manufactured by the Indian mills. A recent trade forecast says there is thus likely to be a real shortage of paper in India, but the situation will not be so serious as in markets where mills for pulp and paper production do not exist.

Possibilities of Export.—The disabilities of the war are not entirely without their compensations, however. The Indian paper making industry has begun to think of the possibilities of the export trade, which now holds out opportunities that may not recur when peace returns. The chastening experiences of the past in the domestic market warns the industry against attempting an extravagant export programme which it will be beyond its capacity to sustain in more normal times; nevertheless, there is no reason why a footing should not be obtained in the markets of adjacent countries—particularly adjacent Empire countries. India offers her neighbours considerable facilities, for the position is that the Indian mills will have a surplus after meeting all the country's own requirements in the protected grades of paper and to a limited extent the demand for non-protected papers. It is the industry's considered opinion that Indian manufacturers are now in a position to export limited quantities of paper, which neighbouring Empire countries would probably prefer to take in preference to the American or Japanese products to which the war must force them in the absence of an alternative source of supply within the Commonwealth. Amongst India's immediate neighbours it may be mentioned that there are no paper mills in Burma, Ceylon, Malaya, and East Africa, and whilst there is some production in both Australia and South Africa, both are importing countries.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from the Commonwealth of Australia, but a certain quantity from Iran also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar Multan, Kulu, Fazilka, Lahore and Panipat are the main collecting centres for wool received by land from Afghanistan and Iran, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports.—There was a decline of Rs. 66 lakhs in the imports of wool and woollens which were valued at Rs. 2,16 lakhs in 1939-40, as compared with Rs. 2,82 lakhs in the preceding year. Imports of raw wool, generally for consumption in Indian mills, totalled 7·7 million lbs. valued at Rs. 75 lakhs as compared with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

7·3 million lbs. valued at Rs. 62 lakhs in 1938-39. Supplies from Australia advanced from 4·4 million lbs. (Rs. 36 lakhs) to 4·9 million lbs. (Rs. 49 lakhs), while those from the United Kingdom declined from 2·5 million lbs. (Rs. 25 lakhs) to 1·9 million lbs. (Rs. 23 lakhs). Yarn and knitting wool was, however, in less demand and imports fell from 3·4 million lbs. to 2·9 million lbs. Japan was the leading supplier in this line and sent 1·7 million lbs. of worsted yarn and 893,000 lbs. of knitting wool in 1939-40. Arrivals from the United Kingdom consisted mainly of 150,000 lbs. of knitting wool. Imports of woollen and worsted piecegoods decline to 2·3 million yards (1·1 million lbs.) valued at Rs. 35 lakhs from 2·5 million yards (1·4 million lbs.) valued at Rs. 45 lakhs in 1938-39. Receipts from Japan advanced from 1,254,000 yards to 1,535,000 yards, but the value of the consignment fell from Rs. 15 lakhs to Rs. 14 lakhs. There were reduced imports from the United Kingdom which amounted to 651,000 yards valued at Rs. 18 lakhs. Arrivals from other countries included Rs. 2 lakhs from Italy as against Rs. 4 lakhs in the preceding year, while German contribution fell from Rs. 2 lakhs to Rs. ½ lakh. Imports of woollen goods mixed with other materials also fell from 2·3 million yards valued at Rs. 32 lakhs to 1·2 million yards valued at Rs. 16 lakhs in the year under review, of which the United Kingdom supplied 698,000 yards valued at Rs. 9 lakhs as against 1·7 million yards valued at Rs. 22 lakhs in 1938-39. Supplies from Japan and Italy were smaller than in the preceding year and were valued at Rs. 3 lakhs and Rs. 2½ lakhs, respectively, in the year under review. Imports from Germany were practically insignificant.

Imports of foreign carpets and floor rugs were valued at Rs. 2 lakhs in 1939-40 as in the preceding year. Of the total value of these imports in 1939-40, the United Kingdom supplied to the extent of Rs. 1 lakh or 50 per cent. The remainder came mainly from Iran and France.

Imports of Shawls and lohis numbered 148,000 valued at Rs. 4 lakhs as against 479,000 valued at Rs. 14 lakhs in the preceding year. Japan almost monopolised the trade in 1939-40 displacing Germany whose share fell from 28 per cent. to 6 per cent. in value.

Imports of blankets and rugs, other than floor rugs, declined sharply from 4·1 million lbs. valued at Rs. 32 lakhs to 1·7 million lbs. valued at Rs. 12 lakhs in 1939-40. Italy was, as usual, the largest supplier, consignments from that country being valued at Rs. 11 lakhs as against Rs. 30 lakhs in the preceding year.

Of the total imports of woollen hosiery valued at Rs. 10 lakhs in 1939-40 as against Rs. 13 lakhs in the preceding year, Japan supplied Rs. 5 lakhs and the United Kingdom, Rs. 4 lakhs.

Exports.—Exports of raw wool declined in quantity from 55·4 million lbs. in 1938-39 to 53·2 million lbs. in 1939-40, but, due to a rise in prices, advanced in value from Rs. 2,99 lakhs to Rs. 3,23 lakhs. In Karachi, the price of Kandahar wool, cleaned basis, steadily rose during the year under review. During the first three months, the price was quoted at Rs. 32 per maund (82 lbs.). The price was stabilized at a slightly higher level of Rs. 34 during the following three months. From the latter part of October, prices began to rise rapidly. The quotation, which stood at Rs. 38 on October 24, reached Rs. 42 in the course of the next two weeks. By December 12, it touched Rs. 44, and on January 16, it rose still further to Rs. 48, at which level the price remained almost till the close of the year, when a slightly easier tendency set in. On March 26, the quotation fell down to Rs. 45.

Exports of raw wool to the United Kingdom declined from 45·0 million lbs. in 1938-39 to 33·3 million lbs. in 1939-40. On the other hand, there were increased shipments to the United States of America which totalled 19·2 million lbs. as against 9·0 million lbs. in 1938-39. Exports to other countries were comparatively small. Re-exports of foreign wool showed an advance from 10·6 million lbs. valued at Rs. 31 lakhs to 16·4 million lbs. valued at Rs. 57 lakhs. As usual, the bulk of these shipments went to the United States of America which took 15·0 million lbs. (Rs. 54 lakhs) in 1939-40 as against 9·9 million lbs. (Rs. 29 lakhs) in the preceding year. The remainder was shipped chiefly to the United Kingdom.

The following table shows the exports of raw wool of Indian origin and imports of foreign wool by land into India and the corresponding re-exports by sea during the last five years :—

	Imports by land (Rail-borne trade at stations adjacent to land frontier routes).	Re-exports by sea.	Exports by sea (Indian Merchandise).
	Cwts.	Cwts.	Cwts.
1935–36 ..	140	101	440
1936–37 ..	194	118	464
1937–38 ..	130	77	339
1938–39 ..	140	94	495
1939–40 ..	207	146	475

The export trade in raw wool is confined chiefly to Sind and Bombay, the percentage shares of these provinces in 1939-40 being 65 and 29 as compared with 75 and 21 in the preceding year. In the case of re-exports, Sind had 19 per cent. and Bengal, 81 per cent. of the trade as against 33 and 67 per cent, respectively, in 1938-39.

Exports of carpets and rugs declined further from 8·9 million lbs. valued at Rs. 82 lakhs in 1938-39 to 8·3 million lbs. valued at Rs. 74 lakhs in 1939-40. As usual, the United Kingdom was the chief customer taking 5·5 million lbs. with a total value of Rs. 44 lakhs as against 7·2 million lbs. valued at Rs. 61 lakhs in 1938-39. Exports to the United States of America and Canada were valued at Rs. 15 lakhs and Rs. 8 lakhs as compared with Rs. 7 lakhs each in the preceding year. Shipments to Australia were valued at Rs. 2 lakhs.

Mill Manufacture.—The number of Mills in India, including Indian States, in 1937 the latest year for which details are available, was 39, with a total paid-up capital of Rs. 100,89,739. The total number of looms and spindles were 1958 and 68,107 respectively.

The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Cottage and Small Scale Industries are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of capets of a fine quality which find a ready sale in the world market. This work is done entirely on handlooms and the carpets etch a high price.

Silk.

Sericulture has been practised in India for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, India has lost her export market and imports annually Rs. 13,000,000 worth of silks from Italy, Japan, China, Switzerland and the United Kingdom. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and mixtures and artificial silk substitutes. In Assam, eri, mulberry and muga silk worms are being reared and about Rs. 1,70,000 worth of silk is annually produced there. Bengal produces Rs. 20,00,000 worth of mulberry silk, Bihar and Orissa produce Rs. 32 lakhs worth of tasar and a little eri silk. The Central Provinces produce Rs. 14 lakhs worth of tasar silk.

Mysore, Kashmir, Jammu, Madras and the Punjab produce Rs. 38,00,000, Rs. 10,00,000, Rs. 2,00,000, Rs. 5,00,000, Rs. 16,000 worth of silk respectively.

Bombay and the United Provinces are investigating whether sericulture can be introduced. The new eri industry in Baroda is spreading. Some of the native States, Madras and the Punjab are trying to introduce eri silkworm rearing.

The industry has been declining in almost all parts of India. China is exporting more silk in India than Japan inspite of the tariff wall. It is progressing in Mysore and Kashmir only. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on the foreign silks.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dyestuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo.

The future of natural indigo is by no means a hopeless one provided steps are taken to effect such improvements as are clearly

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

possible. Indigo soils have deteriorated due to lack of proper manuring. Continual cropping has resulted in phosphate starvation. This can be checked by proper manuring with superphosphates. Improvements by botanical selection and better business organisation and methods of marketing the product will also aid in hastening recovery.

Since synthetic indigo was put upon the market in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the Great War of 1914-18.

Again a demand has arisen for the natural indigo since the outbreak of the present war, but it is nothing like the demand during the last war, nor have prices risen to the same height. So long as the war continues there will probably be a limited demand for natural indigo, after which prices will drop to level tending to make its manufacture an unsound proposition financially.

The history of the competition from the synthetic article has been such that it has been put on the market at prices always tending to be cheaper. Whereas the cost of production of the natural has increased with the cost of labour and the rise in values of other crops which have in consequence become more attractive proposition to the cultivator. As far as Behar is concerned the indigo industry may be regarded as dead though several indigo concerns are now manufacturing on a small scale and will continue to do so.

OILS AND OIL CAKES.

The statistical publications, issued by the Commercial Intelligence Department of the Government of India, show that the export of all oil seeds from India is steadily going down except groundnuts on account of keen international competition.

It is economically as well as industrially unsound for India to export her oil seeds instead of manufacturing oils, oil cakes and other allied products in India. The present practice allows the other countries to derive the manufacturing profits and at the same time deprives Indian agriculture of the great potential wealth of oil cakes as cattle feed and manure.

In India there are about 500 oil mills registered under the Factories Act and over 1,000 medium size power driven oil mills. An immense quantity of oil is, as a matter of fact, already manufactured in this country by crude as well as up-to-date processes.

Village Oil Mills worked by bullocks and handpresses exist in all parts of the country and supply most of the local demand for oil and oil cakes. The big mills supply the requirements of the towns and export trade. These mills treat all kinds of oil seeds available in the country.

The industry has made good progress in the production of mustard oil, castor oil, groundnut oil and linseed oil and as a result the export of these oils and oil cakes to foreign countries has steadily improved during the last ten years. The progress in the case of groundnut and castor is very satisfactory.

The development of oil milling industry in India has to face the under-mentioned difficulties. There are high protective tariffs in European countries which encourage the export from India of raw materials rather than the manufactured products. Secondly there is a better market for the oil cake in Europe and Indian oil cake, on account of want of standard specifications, is sold at a discount. The freight on oil seeds is less than that on oils and oil cakes, hence it is easy and economical to transport oil seeds by sea than oils or oil cakes. The development in the export trade in oils demands special consideration of shipping companies to provide tanks for bulk transport of oils as arranged by the railway companies.

The standardisation of oils and oil cakes will help the industry in finding markets in foreign countries where a better price can be obtained for the articles.

It is necessary to educate the Indian Cultivator in the use of oil cakes for feeding and manurial purposes and it should be impressed on him that the value of the article does not depend on the oil content but on oil and albuminoid content of the article. The lower oil content in the cake means a higher percentage of albuminous matter which is very essential for the cattle.

Effect of War on the Oil Industry of India:—During the War of 1914-18 the average export of linseed oil, groundnut oil and castor oil had increased by 443%, 150% and 60% respectively over the last pre-war average of 1912-13 and 1913-14, but the export of cake had, however, no marked change during that period. The oil crushing industry of India will have a good prospect of development during the present war period.

The prices of oils and oil cakes at the commencement of War in September were lower than half the prices of these articles during last pre-war, war and early post-war periods on account of general low price levels since 1933-34. The present War will have effect in increasing the price level and brisk trade in oils provided freight facilities are available.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promising and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachar gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1900:—

Progress of the Industry.

Year.	Area under tea in '000 acres.	Production in '000,000 lbs.	Year.	Area under tea in '000 acres.	Production in '000,000 lbs.
1900-1904 (average)	523	201	1930 ..	804	391
1905-1909 ,, ..	539	242	1931 ..	807	394
1910-1914 ,, ..	591	290	1932 ..	809	434
1915-1919 ,, ..	662	374	1933 ..	818	384
1920-1924 ,, ..	709	336	1934 ..	826	399
1925 ..	728	364	1935 ..	832	394
1926 ..	739	393	1936 ..	834	395
1927 ..	756	391	1937 ..	834	430
1928 ..	776	404	1938 ..	833	452
1929 ..	788	433	1939	833*	452*

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by nearly 60 per cent., the production has more than doubled.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the relative importance in 1938 of the various provinces from the point of view of the tea industry:—

Province.	Area under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary.)
Assam	439	261,037	520,891
Bengal	201	106,339	202,609
Madras	78	38,180	65,735
njab	9	2,777	9,996
United Provinces	6	1,856	3,683
Bihar	4	1,304	2,697
Coorg	†	101	170
Total British India	737	411,594	805,781
'ndian States	96	40,266	89,726
Total India	833	451,860	895,507

* Subject to revision. † Less than 500 acres.

Digitized by Arya Samaj Foundation Chennai and eGangotri

The total number of persons employed in the industry in 1938 was 895,507 as against 877,100 during the previous year. Of these 840,111 were permanently employed and 55,396 temporarily employed. Their average monthly wages, excluding non-cash payments, in 1937-38 were as follows:—

Men.	Women.	Children.
Rs. a. p.	Rs. a. p.	Rs. a. p.
6 14 3(*a*)	5 5 11(*a*)	3 12 8(*a*)
4 12 3(*b*)	4 4 9(*b*)	3 4 2(*b*)

(*a*) Settled labourers. (*b*) Faltu or Basti labourers.

Although India produces large quantities of tea its consumption of tea is comparatively very little, the quantity available for consumption being about 96 million lbs. in 1938-39. The low domestic consumption, however, enables India to export large quantities to other countries, the principal among which is the United Kingdom. In 1939-40, 79 per cent. of the total quantity of tea produced in India was exported abroad. Of the total exports of 357 million lbs., the United Kingdom alone took 287 million lbs. during the year.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and here was thus no inducement to grow the former. To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The industry has consequently been able to enjoy more stable conditions than would otherwise have been possible in the circumstances of the last six years. The export quota which was fixed at 82½ per cent. of the standard exports in 1935-36 rose steadily to 92½ per cent. in 1938-39. Due to accumulation of stocks and decline in prices the quota for the following year was fixed at 90 per cent., but the restriction of supply and an increase in demand had the effect of placing the industry again in a favourable position in the world market even before the outbreak of the war.

The outbreak of war gave rise to entirely new conditions. In the United Kingdom, the entire tea trade passed under the control of the Government. A Tea Controller for India was appointed to administer the emergency tea control scheme. Owing to the suspension of re-exports from London, the need for replenishing their stocks by America and the Colonies and the transfer of their demand by some of the markets supplied by Java to Indian tea there was a strong demand for practically all kinds of tea and the export quota was, therefore, raised to 95 per cent. in October 1939 and was kept unchanged at 95 per cent. for the next season. In June 1940, however, the International Tea Committee reduced the quota for 1940-41 to 90 per cent. for all participating countries. An Ordinance amending the Indian Tea Control Act, 1938, was passed in August 1940 giving effect to the reduced export allotment.

The following table explains briefly the position as regards the *export of tea* by sea from India:—

Year.	Amount exported (million of lbs.)	Value in lakhs of rupees.
1	2	3
1926-27	349	29,04
1927-28	362	32,48
1928-29	360	26,60
1929-30	377	26,01
1930-31	356	23,56
1931-32	341	19,44
1932-33	379	17,15
1933-34	318	19,85
1934-35	325	20,13
1935-36	313	19,82
1936-37	302	20,04
1937-38	334	24,39
1938-39	348	23,29
1939-40	357	26,08

The following figures show the proportion of exports of tea from India sent to different parts of the world to the total exports from India by sea:—

	1937-38 per cent.	1938-39 per cent.
To United Kingdom	86.1	87.3
To Rest of Europe	1.9	1.6
To Asia	4.9	3.4
To America	6.5	6.9
To Australasia	0.3	0.5
To Africa	0.3	0.3
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

lb. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. p. 5 in 1931-32 and 9 as. 4 p. in 1930-31. The position, however, has improved considerably since then. After the outbreak of the war the prices of tea assumed a marked rising trend. The demand for practically all kinds of tea was strong and the prices advanced steadily till they reached their peak at the beginning of December. By the middle of January, however, they began to decline and by the end of the season had reached the pre-war levels. Nevertheless, the average auction price for the season (11 as. 5 p. per lb.) was higher than in any season since 1929-30. The internal market fluctuated widely during the year, the closing quotation of the season being 3 as. 6 p. as against 5 as. 3 p. in December and 4 as. 4 ps. in August 1939; but the average price for the season was higher than for the previous season.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 =100 :—

	Average price at auction sales.			Average price at auction sales.	
	Price per lb. As. p.	Index Number.		Price per lb. As. p.	Index Number.
1901-02 to 1910-11 ..	6 0	100	1934-35 .. (a)	8 9	146
1927-28	14 10	247	(b)	5 2	86
1928-29	11 4	189	1935-36 .. (a)	9 5	157
1929-30	9 11	165	(b)	4 10	81
1930-31	9 4	156	1936-37 .. (a)	10 1	168

1932-33	5 2	86	1937-38 .. (a)	11 4	189
1933-34 .. (a)	9 7	160	(b)	4 9	79
(b)	4 10	81	1938-39 .. (a)	9 7	160
			(b)	4 0	67
			1939-40 .. (a)	11 5	190
			(b)	4 4	72

(a) For teas sold with export rights. (b) For teas for internal consumption.

The rate of duty under the Indian Tea Cess Act of 1903 was raised to Rs. 1-6-0 per 100 lbs. with effect from March 1939. The total amount of duty collected in 1938-39 was Rs. 42,98,000. The Indian Tea Cess Act was due to expire on 31st March 1938, but at the request made by the producers through the Indian Tea Market Expansion Board, the Government of India agreed to extend the life of the Act for a period of ten years.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1938-39 (including plantations of less than 10 acres) was 185,000 acres, as against 182,000 acres during the previous year. The total production of cured coffee in India during the year was 40 million lbs. as compared with 33.5 million lbs. during the previous year. The major portion of this, as usual, came from Mysore (18.9 million lbs.), Madras (11.6 million lbs.) and Coorg (8.9 million lbs.).

The daily average number of persons employed in the plantations during 1938-39 was returned at 104,251 of whom 71,717 were permanently employed (namely, garden labour 46,426 and outside labour 25,291) and 32,534 temporarily employed (outside labour), as compared with 102,252* persons (42,201 garden and 23,684 outside labour permanently employed and 36,367* temporary outside labour) in 1937-38.

The total exports of coffee increased from 150,000 cwts. in 1926-27 to 277,000 cwts. in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 198,000 cwts. and 184,000 cwts. respectively; but exports again rose in 1930-31 and amounted to 293,000 cwts. In 1931-32 the shipments declined to 156,000 cwts. but in 1932-33 exports again rose and amounted to 173,000 cwts. There was a further rise during 1933-34, the total exports amounting to 186,000 cwts. In 1934-35 the exports again declined to 141,000 cwts., but in 1935-36 there was a pronounced rise in the quantity exported which amounted to 216,000 cwts. It, however, again declined to 211,000 cwts. in 1936-37. There was a further fall in the following year when the exports dropped to 135,000 cwts., but the demand for Indian coffee in the markets abroad was on the whole satisfactory during 1938-39 and the exports again rose 185,000 cwts. during the year. In 1939-40, however, they again fell to 168,000 cwts. Shipments to the United Kingdom amounted to 46,000 cwts., or 28,000 cwts. less than in 1938-39. Exports to France, Belgium, and the Netherlands also declined, but those to Norway and Iraq increased.

* Revised figure.

Not only does India export coffee in large quantities, but till a few years ago it also used to import it, chiefly from Java, Ceylon and the Straits Settlements, which it used to re-export to Mascat Territory, Iraq and the Bahrein Islands. During 1936-37, however, there were no imports of coffee into India. The quantity of coffee imported in 1937-38 was 1,195 cwts. the major portion of which came from Burma. Very little coffee was imported during 1938-39, the total imports amounting to only 30 cwts.

The following table gives the figures of the production and exports of Indian coffee:—

Production and Export of Indian Coffee in thousands cwts.

12 Months ending June 30th.	Production.	Export.	Surplus available for Home consumption.
1927	306.1	241.3	64.8
1928	317.5	261.5	56.0
1929	247.9	138.3	109.6
1930	352.0	279.4	72.6
1931	294.4	208.4	86.0
1932	300.1	162.0	138.1
1933	295.0	168.7	126.3
1934	308.8	186.6	122.2
1935	292.6	147.5	145.1
1936	367.6	230.0	137.6
1937	303.6	162.4	141.2
1938	299·3	146·5	152·8
1939	358.1	206.7	151.4

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. The average wholesale price of Indian coffee in London, which was 140s. in 1923 and 127s. in 1929, fell to 86s. in 1930. The declared value per cwt. of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs. 63-6-7 in 1932-33 but fell to Rs. 55-1-4 in 1933-34. In 1936-37, it had declined to Rs. 39-15-8, but recovered to Rs. 40-6-3 in the following year and was Rs. 40-10-4 in 1938-39. In 1939-40, however, it again recovered to Rs. 43-8-8.

The Indian Coffee Cess Act, providing for the creation of a fund to be expended by a Committee specially constituted in this behalf for the promotion of the cultivation, manufacture and sale of Indian Coffee, was passed in November, 1935. It provides for the levy of a customs duty on all coffee produced in India and exported therefrom to any place beyond the limits of British India or to Burma at a rate, not exceeding one rupee per cwt., fixed by the Governor-General in Council on the recommendation of the Coffee Cess Committee. The rate originally fixed was 8 as. per cwt. But from 1st June, 1938, it has been raised to Re. 1 per cwt.

Sugar.

Sheltered behind adequate tariff protection, guaranteed for a period of fifteen years, ending on March 31, 1946, the Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages—consequences of the depression—have helped the rapid growth of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs. 30 and Rs. 32 crores.

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931. In addition, a revenue surcharge of 25 per cent. (amounting to Re. 1-13 per cwt.) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communique* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 31, 1938. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Re. 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, *viz.*, Rs. 9-1-0 per cwt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0, and a surcharge was imposed at the rate of Rs. 2-0-0 per cwt., equivalent to the increased excise duty of Rs. 2 per cwt. on internal production from the same date. The total import duty from 28th February, 1937, was Rs. 9-4-0 per cwt. With effect from 1st April, 1939, the protective duty was reduced to Rs. 8-12-0 per cwt. and it was raised to Rs. 9-12-0 from 1st March, 1940, as a result of the increase in the excise duty from Rs. 2 to Rs. 3 per cent.

A Tariff Board Enquiry was instituted in March 1937, for determining the extent of protection to be conferred on the industry for the remainder of th period of 8 years. The Tariff Board submitted its Report in December, 1937, but as the Government of India could not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, *viz.*, Rs. 9-4-0 per cwt. upto 31st March, 1946, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs. 0-8-0 per cwt. pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of Rs. 8-12-0 per cwt. for a period of two years, ending 31st March, 1941.

Due to an increase in the excise duty on sugar from Rs. 2-0-0 per cwt. to Rs. 3-0-0 per cwt. from 1st March, 1940, the import duty was increased to Rs. 9-12-0 per cwt. from 1st March, 1940.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re. 1-5 per cwt. on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt. to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing "fair prices." The excise duty was enhanced to Rs.2-0-0 per cwt. from 28th February, 1937, and to Rs. 3-0-0 per cwt. with effect from the 1st March, 1940.

Due to the outbreak of the European war, the Central Government announced in September, 1940, that no tariff board would be appointed, as was announced by them in March, 1939. In the Delhi sessions of the Legislatures in 1940 the Government of India passed an Act, whereby the existing duties were continued for a period of one year more, *i.e.*, up to March 31, 1942.

Statistics given below, show the progress of the industry in recent years :—

Year.	No. of Factories.	Quantity of sugar manufactured from cane. Tons.	Quantity of sugar refind from *gur*. Tons.	Quantity of Khandsari production Tons. (Est.)	Total quantity of sugar. Tons.
1929-30	27	89,768	21,150	200,000	310,918
1930-31	29	119,589	31,791	200,000	351,650
1931-32	32	158,581	69,539	250,000	478,119
1932-33	57	290,177	80,106	275,000	645,283
1933-34	112	453,965	61,094	200,000	715,059
1934-35	130	578,115	30,103	150,000	757,218
1935-36	137	932,000	50,037	125,000	1,107,167
1936-37*	137	1,111,400	19,500	100,000	1,230,900
1937-38	136	930,700	16,500	125,000	1,072,200
1938-39	139	650,800	14,200	100,000	765,000
1939-40	145	1,241,700	31,700	125,000	1,373,400
1940-41	150	1,000,000	50,000	125,000	1,175,000

* Factories in Burma and production in Burma, excluded after 1936-37.

The area under cultivation of sugar-cane has kept pace with increased production; from 2,677,000 acres in 1929-30, it increased to 4,440,000 acres in 1936-37 but fell to 3,869,000 acres in 1937-38 and to 3,108,000 acres in 1938-39. Again it increased to 3,731,000 acres in 1939-40 and to 4,244,000 acres in 1941-42. Prior to 1932-33, there were only 31 cane factories; 25 new factories were added in 1932-33 alone while another 65 new factories were started in the following year—an increase of 400 per cent. in two years. Since 1933-34, about 34 new factories of large cane crushing capacity have been established, and in 1940-41, no less than 150 factories were working. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (*gur*) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32, the volume of factory produced sugar has increased by approximately 700 per cent. During 1936-37, India produced over 1,230,000 tons of sugar, *i.e.*, slightly more than her estimated consumption of about 1,150,000 tons in 1936-37, and after two lean years, again produced over 13¼ lakh tons in 1939-40.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent. in the following year and dropped to about 250,000 tons in 1933-34 and decreased further to 221,000 tons in 1934-35. During 1935-36, imports fell further to 198,888 tons, and in 1936-37, the net import was only 11,960 tons. As a result of dwindling imports Government are losing revenue from this source. The import during 1937-38 was only 9,410 tons but the import in 1938-39 was over 254,000 tons, in view of the deficit in indigenous production. In 1939-40, due to the greatly increased internal production and the outbreak of the European War, the imports dwindled to about 35,000 tons. The yield from this source diminished from over Rs. 10 crores in 1930-31, to about Rs. 3.81 crores for the financial year ended March 31, 1935 to 3.24 crores for the yearended March 31, 1936, to Rs. 50 lakhs in 1936-37, to Rs. 25 lakhs in 1937-38, and to Rs. 45 lakhs in 1938-39. In 1939-40, however, it went up to about Rs. 396,00,000 due to increase in imports, necessitated by the small cane-crop, diseased cane, etc., in 1938-39, in India. The imposition of the excise duty at the rate of Re. 1-5-0 per cwt. on factory sugar, and Re. 0-10-0 on khandsari sugar, from April 1st, 1934, has yielded a revenue to the Government of Rs. 97,22,000 in 1934-35, and Rs. 1,58,24,000 in 1935-36, and Rs. 2,52,62,000 in 1936-37. With the increase in excise duty on factory sugar to Rs. 2 per cwt., and Re. 1 per cwt. on Khandsari sugar the yield during 1937-38 was Rs. 3,30,97,000 in 1937-38, and Rs. 4,22,44,000 in 1938-39 and Rs. 2,47,19,000 in 1939-40. With a further increase in the excise duty from March 1, 1940, the yield was about Rs. 3,00,00,000 in 1940-41.

Since the imposition of the excise duty it is noteworthy, that the Khandsari production has gone down considerably. From 1st March, 1939, the duty on Khandsari sugar was decreased to Re. 0-8-0 per cwt., but the definition of "factory" in the Sugar Excise Duty Act, 1934, was amended, so as to omit the reference to the number of workers employed with a view to enable duty being charged even in premises where less than 20 workers are employed. The Government of India expected that with the definition of 'factory' thus amended even with the reduced duty on Khandsari of Re. 0-8-0 per cwt. there would be a revenue of about Rs. 6,00,000 during 1939-40. But this hope was not fulfilled. The yield was only about Rs.135,000 in 1939-40. There is no excise duty on Palmyra sugar.

In view of the astounding growth of the industry within such a short time, the following table showing the total production (factory as well as khandsari and refined from *gur*) of sugar in India, the estimated consumption, and the import of sugar will be of interest :—

Year.	1934-35 Tons.	1935-36 Tons.	1936-37 Tons.	1937-38 Tons.	1938-39 Tons.	1939-40 Tons.	1940-41 Tons.
Total internal consumption	676,218	1,107,167	1,230,900	1,072,300	765,400	1,373,400	11,500,000
Estimated Annual consumption	1,059,000	1,074,000	1,167,000	1,159,000	1,065,000	150,000	..
Total import	197,775	86,962	11,960	9,410	254,400	36,000	..

During the year 1937, there was a precipitate fall in the price of sugar and in order to avert internal unrestrained competition a Sugar Syndicate was brought into existence, comprising over 90 mills. Later in the year, the industry approached the Government for legislative interference with a view to avoid over-production of sugar and to overcome internal unrestrained competition, which brought down the price of sugar to an uneconomically low level. The Governments of the U.P. and Bihar, to whom these representations were made passed Sugar Factory Control Acts, and made it compulsory for every mill to obtain a licence for working sugar factories from the Government. One of the conditions of the grant of licence to a factory has been membership of the Indian Sugar Syndicate. The Indian Sugar Syndicate has thus been given legislative recognition by the Governments of the U.P. and Bihar, and all mills working in the provinces of the U.P. and Bihar are compelled to sell their sugar through the Syndicate. The Governments of the U.P. and Bihar have also appointed a joint Control Board consisting of the representatives of the U.P. and Bihar Governments, the representatives of the industry, and of cultivators and consumers. In 1940, the life of the Sugar Control Act was extended by Bihar and U. P. Governments up to June 30, 1944, and a Sugar Commission was also appointed by them to be "a final authority, subject to Government control, on all matters connected with the production and sale of sugar, as well as other matters regarding cane-prices, etc."

There was a very large carry-over of sugar, approximating over 4 lakhs tons, at the beginning of the 1940-41 season and as a consequence the U. P. & Bihar Governments restricted, by means of quota, the production of sugar in factories in U. P. and Bihar. There was no check, however, to the production of sugar in Provinces outside U.P. & Bihar and in Indian States. The carry-over at the beginning of the 1941-42 season will perhaps be larger still. The industry in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

U. P. & Bihar is under rigid control of the Government and is handicapped in various ways, *e.g.*, fixation of high minimum prices of cane-levy of cane-cess, etc.

During the year 1937 the Government of India imposed a ban on the export of sugar from India, by sea, to any country except to Burma, for a period of five years.

During 1940, permission was secured to export 2 lakh tons to the U. K. but it did not materialise.

It is also of interest to note the production of *gur* for direct consumption since 1931-32.

	gur. (Tons.)
1931-32	2,758,000
1932-33	3,240,000
1933-34	3,486,000
1934-35	3,701,000
1935-36	4,101,000
1936-37	4,268,000
1937-38	3,364,000
1938-39	2,131,000
1939-40 (Est.) ..	2,500,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (*gur*) being 5,452,000 tons (*vide* The Indian Sugar Industry Annual, for 1939, and 1940, by M. P. Gandhi).

The total value of *gur* and sugar produce in India is estimated at Rs.750,000,000 in 1939-40.

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 120,000 workers, in addition to a large number of graduates and technical men.

INDIAN TOBACCO.

History.—The Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to India about the year 1508. Though there are many species in the Genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana tabacum* and *Nicotina rustica*. Of the two, the former is more common and commercially important.

Importance.—India is one of the principal tobacco producing countries of the world. It occupied the first rank, but since the separation of Burma its position is second only to the United States of America. In 1938-39, the area under tobacco was, 1,290,000 acres, or about 28 per cent. of the world's acreage. The production during the same period was estimated to be 1,093 million lbs.

The chief tobacco growing Provinces are Madras (83,000 acres) as compared with 1936-37, the area under tobacco in several Provinces and States shows an alround increase. In Madras, particularly, the area increased by about 26 per cent. mainly due to the increased cultivation of Cigarette and pipe tobacco grown for export. The annual value of the crop in India is about Rs. 18 crores and constitutes, therefore, an important source of ready cash to the growers.

Research.—A great deal of research work has been done in India during the last 30 years both by the Government and by private agencies. The Imperial Agricultural Research Institute, Pusa, (now at New Delhi) isolated Pusa T. 28 and T. 63 among *N. tabacum* varieties and Pusa T. 18 among *N. rustica* for chewing and *hooka* purposes respectively. Details of the methods of flue-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadiad, the Bombay Department of Agriculture, isolated Gandiu 6, Piliu 45, and Keliu 49, heavy yielding bidi and chewing tobacco strains. Attempts are also being made to improve the Nipana tobacco on the Tobacco Research Station, Nipani.

In Bengal, trials are being carried out on the Government Agricultural Farm at Burirhat (Rangpur), to find out the possibility of growing superior varieties of cigar tobacco from Sumatra, Havana, Manila and Pennsylvania.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T. 20 in *Natu* or country tobacco for cheroot and pipe purposes and early maturing strain (H. S. 9) of Harrison special, the cigarette tobacco variety popular in India.

The Imperial Council of Agricultural Research, New Delhi, started in 1936 a Tobacco Research sub-station at Guntur for the improvement of the quality of cigarette tobacco. It was found that jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped to improve the quality of cigarette tobacco better than Maize and Variga (*Panicum Miliaceum*).

The India Leaf Tobacco Development Company, the largest buyers of tobacco in India have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in Saharanpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia tobacco production and have helped to build up the Virginia tobacco industry to the position it now occupies.

The cultivation of Virginia tobacco in the Mysore State has increased appreciably during recent years due to the impetus given by the Mysore Tobacco Company.

Improvement in Marketing.—The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in the above direction, the Indian Tobacco Association which consists of representatives of growers, dealers and manufacturers was formed at Guntur. Under the Agricultural Produce (Grading and Marking) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for un-manufactured flue-cured and sun-cured Virginia and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sun-cured *Natu* (Country) tobacco. Samples of these grades are furnished every year to the Trade Commissioner for India in London, for purposes of arbitration. In 1940 tobacco was graded at eleven centres in Madras, Bihar and Bengal. Over two million lbs. of tobacco valued at Rs. 3¼ lakhs were graded at these centres.

In 1939, the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezwada taluk of Kistna District. This provides for regulating the market practices regarding weighment, trade allowances and methods of sale. A number of market yards has been opened where the growers and dealers are given facilities for transacting their business in tobacco.

Production.—More than half the Indian production is concentrated in 5 clearly defined zones, *viz* :—

(1) THE NORTH BENGAL AREA comprises the districts of Rangpur, Jalpaiguri and Dinajpur of Bengal including the Cooch Behar State. About three-fourths of the crop in this area is under *N. tabacum* which includes the varieties locally known as *Jati, Bhengi, Naokhol* and *Hingli*. The remaining one-fourth is under *N. rustica* which includes the local *Vilaiti* and *Motihari* varieties. *N. tabacum* varieties are mainly used for cigar and cheroot making and *N. rustica* varieties for *Hooka* and chewing purposes.

The soils are grey ashy coloured loams rich in potash. Tobacco is sown in the nurseries from August to September and transplanting of seedlings is done from October to December. The crop is irrigated from temporary wells and is harvested from January to March. The leaf is cured by air-curing and sun-curing methods. The produce is marketed from March to October. The finer qualities of *Bhengi* are shipped to Burma, while the poorer qualities are sold in India for cigarette manufacture. *Hingli* and part of *Motihari* are sold for making snuff.

(2) THE GUNTUR AREA comprises the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of flue-curing of Virginia tobacco in 1928, all the tobacco was sun-cured. The tobacco produced in this area is grouped into (*i*) Virginia :—(*a*), Flue-cured (*b*), Sun-cured, (*ii*) Country or *Natu* tobacco, invariably sun-cured. In the first group, Harrison Special and in the second group *Thoka Aku, Kara Aku* varieties are important. Flue-cured tobacco is exported to the United Kingdom to the extent of about 30 million lbs. for manufacture of cigarette and pipe tobacco. The sun-cured Virginia, and *Natu* tobaccos are exported to the United Kingdom, Japan and other countries for making cheaper cigarettes, etc. The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably without the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured Country and Virginia tobaccos are marketed from March to June. There are nearly 6,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by stringing the leaf to jute twine and curing them on racks pitched on the open field for drying in sun. To the Indian Leaf Tobacco Development Company Ltd. goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribution, research and propaganda in manurial requirements, proper methods of curing and ensuring a market for the tobacco by buying the major portion (nearly 70 per cent) of the production.

(3) THE NORTH BIHAR AREA comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two-thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by the Cigarette manufacturers in India. The production from *N. rustica* is utilised for *hooka* purposes.

The soils are light, ash-coloured, deep, and of Gangetic alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings is commenced in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to middle of June.

(4) THE CHAROTAR (GUJERAT) AREA comprises Anand, Borsad and Nadiad talukas of Kaira district and Petlad and Bhadran talukas of Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (*i*) *Gandiu*, (*ii*) *Piliu*, (*iii*) *Keliu*, (*iv*) *Kaliu*, (*v*) *Saijpuri*. Of late, attempts are being made to grow a few acres under *Calcuttia* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *bidi* tobacco, while *Kaliu*, being irrigated with well water rich in salts (Nitrates), is eminently suited for *hooka* and snuff purposes. *Saijpuri* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the Baroda State have been doing work for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Piliu* and *Keliu* are grown without irrigation, while *Gandiu* is grown dry or irrigated. *Kaliu* and *saijpuri* are irrigated. The crop is harvested in December-January. The leaf is either air or ground-cured. The tobacco is sold from the latter half of December to end of June with the peak period in March and April.

(5) THE NIPANI AREA includes Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj States. In this area varieties of *N. tabacum*, viz. *Mirji, Sangli, Nipani, Jawari, Kare Baglani* and *Surti* are mainly grown. Of the varieties of *N. rustica, Pandharipuri* is very largely grown. Except the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tobacco produced on the riverine soil, which is used as *Hathpan* for chewing, all the tobacco is converted into *Jarda* for *bidis*. The *Pandhari-puri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is grown on a small area on the red loams. The nurseries are sown in the middle of June and planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and drops by June.

Most of the tobacco exported from India to Aden and Dependencies is from the Charotar and Nipani areas. Apart from these five important areas, each province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts are in progress, through *ad-hoc* committees established for the development of tobacco, to grow the several types, *e.g.*, cigarette, *bidi*, *hooka*, chewing and snuff tobaccos upto the limit of their requirements in the first instance. The Imperial Council of Agricultural Research, New Delhi has been rendering great help in this direction.

Manufactured Products.—Tobacco is manufactured into many different forms for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of other various products mentioned below. The figures in brackets show the value of the product in Crores of rupees.

(*i*) *Hooka* (9.60), (*ii*) Cheroots (9.20), (*iii*) *Bidis* (7.52), (*iv*) Cigarettes (5.86), (*v*) Chewing (3.02), (*vi*) Snuff (1.53), (*vii*) Cigars (0.15) (Total=36.88).

Apart from cigarettes, the other tobacco products are prepared with little of standard machinery, leaving room for mushroom manufacturers and thus leading to a great variation in the quality of products, standardisation of which is engaging attention.

Import and Export—In 1940-41, India imported tobacco worth Rs. 134 lakhs representing an increase of 28 per cent. over the value of imports in 1938-39. The total value of exports of tobacco in 1940-41 was Rs. 288 lakhs as against Rs. 276 lakhs in 1938-39.

THE LAC INDUSTRY.

Lac is a resinous substance secreted by an insect which lives on the twigs of certain trees. The insects are extensively cultured, especially in Northern India. Lac is an important constituent for numerous industrial processes. The annual production of raw lac in India is 40,000—50,000 tons.

The chief use of lac in India is in polishing furniture. But this can obviously absorb only a limited quantity of the produce. Another use is in "hot" lacquering of wooden toys, penholders, etc., but here again the consumption, though increasing, is still very small. About 300 tons of lac are used every year for the manufacture of gramophone records in India. Refuse lac is sometimes used in the manufacture of bangles and for filling hollow gold and silver articles. But all the above uses together probably do not account for more than 2-3 per cent. of the total lac produced. Thus 97-98% of the production of lac is exported abroad, the United States of America being the largest consumer.

In foreign countries lac is used in the manufacture of gramophone records, French polish, floor varnishes, insulating varnishes and cements, grinding wheels, hats, leather dressings, paper finishes, etc., etc.

Shellac moulding appears to be confined in India only to the manufacture of gramophone records. Shellac was only one of many other materials for the moulding trade till the rise of the gramophone industry gave shellac the unique place which it now occupies in this industry, no synthetic resin having yet been able to replace it as among high-class gramophone records, those with a shellac base are undoubtedly the best.

The steady improvement in the lac industry since 1900 has been largely due to the growth of the gramophone industry. At present 30 to 40 per cent. of the total world output of lac is consumed in the manufacture of gramophone records. There is yet a large potential market for gramophones in the East.

With improvements in heat resistance and mechanical strength brought about by chemical modifications, a wide field of application which the synthetic resins have opened up can still be exploited by shellac. The Indian Lac Research Institute at Namkum in Bihar and its fellow research organisation in London are engaged in investigating these openings, together with the possibilities of improvements in cultivation, pest control, &c., which will lead to the production of a better grade of raw material. Recent developments in increasing the uses for lac include new moulding powders, for both compression and injection-moulding, laminated boards of paper, jute, etc., baking enamels from refuse lac, oil varnishes, transparent resins and adhesives, etc. Improved methods of cultivation are taught to the villagers through trained demonstrators.

INDIAN FILM INDUSTRY.

The Indian Film Industry at the present time claims to occupy eighth place among the industries of India. It is 28 years old and celebrated its Silver Jubilee in 1939 by holding a Congress and Exhibition in Bombay.

The first Indian film "Harischandra" was produced by Mr. D. G. Phalke in the year 1913, and since then the development of the industry has been both extensive and rapid. With the coming of talkies the pace of progress substantially increased. Early development took place in Bombay, which today is the "Hollywood of India", for no less than 66 per cent., or two thirds the total annual production of Indian films comes from Bombay studios. From Bombay the industry spread to other provinces, and it is now well established in Bengal as also in Madras, in which it has made remarkable progress in recent years.

NUMBER OF STUDIOS.

There are about 50 film studios in India, and about 150 concerns engaged in producing films. The principal film producing studios are located at Bombay, Poona, Kolhapur, Calcutta, Madras and Lahore.

Although exact figures are not available in certain cases, it is roughly estimated that about Rs. 8·37 crores are invested in the Production, Distribution and Exhibition branches of the Indian film industry, in which some 15,000 persons are it is estimated employed. Investment in Production and Distribution amounts to about Rs. 3 crores; Investment in the construction and equipment of Studios about Rs. 1 crore, and investment in the Construction, Equipment and Cinemas about Rs. 4·37 crores.

Of the 15,000 who are employed in the industry, there are some 4,000, mainly artistes and technicians engaged in the Production, some 4,500, mainly clerical, in the Distribution, and some 6,500 in the Exhibition of films. The total salaries paid out in a year is estimated to come to about Rs. 50 lakhs.

FEATURES AND SHORTS.

The total production of feature films, of an average length of 13,000 ft., comes on an average to about 200, at an average cost of about, Rs. 1,00,000 per film. It is thus estimated that about Rs. 2,00,00,000 are spent annually in the production of pictures, out of which Rs. 40 lakhs is the expenditure on Raw Films.

The following table gives the number of short and feature films exhibited in India. The table has been compiled from reports of censored films published by the Boards of Film Censors at Bombay, Calcutta, Madras and Lahore. The figures show that while in feature films the production of the Indian industry has considerably increased, there has not been as great an increase in the production of shorts :—

Year.	FEATURES		SHORTS		GRAND TOTAL

DISTRIBUTORS.

There are about 150 distributors in all, of whom 9 are distributors of foreign films. The majority of the distributors of foreign films represent American, and the rest English producers. These distributors import on an average about 250 Feature Films and 800 Shorts every year. The distributors are mainly centred in Bombay, Calcutta, Delhi, Madras, Lahore, Bangalore, Karachi and Bhusawal to supply cinemas, throughout the country with pictures for exhibition.

CINEMAS IN INDIA.

The number of cinemas has been rapidly increasing and there are about 1,265 permanent cinemas, of which 1,000 show Indian films, while 265 show foreign films. In addition there are about 500 touring cinemas.

The gross annual income of cinemas showing Indian films amounts to about Rs. 2·40 crores. Although there is a source of income from abroad for Indian films this does not amount to much. It is estimated that about 5 per cent. only of the total income from Indian films comes from abroad while 95 per cent. comes from India itself. The gross annual income of cinemas showing foreign films is estimated about Rs. 60 lakhs.

Following are the principal Circuits with Population, Number of Stations and Number of Cinemas :—

Western Circuit—Comprising Bombay (Pop.) 17,992,053 ; Baroda States 2,443,007 ; Bombay States 4,468,396 ; Western India States Agency 3,999,250 ; Aden 51,478. Total Pop. 28,954,184 ; No. of Stations 100 ; No. of Cinemas 230.

Central Circuit—Comprising Central India States (Pop.) 6,632,790 ; Central Provinces States 2,483,214 ; Gwalior 3,523,070 ; Rajputana 11,225,712 ; C. P. and Berar 15,507,723 ; Ajmer-Merwara 560,202. Total Pop. 39,932,801; No. of Stations 65 ; No. of Cinemas 118.

North West Frontier Circuit.—Comprising North West Frontier Province (Pop.) 2,425,076 ; Sind 3,887,070 ; Baluchistan 463,508; Baluchistan States 405,109 ; North West Frontier (Agencies and Tribal Areas) 2,259,288. Total Pop. 9,440,051 ; No. of Stations 36. No. of Cinemas 76.

Northern Circuit—Comprising Punjab, (Pop.) 23,580,852 ; U. P. 48,408,763 ; Kashmir and Jammu 3,646,243 ; Delhi 636,246 ; Skikim State 109,808 ; Punjab States 437,787 ; Punjab States Agency 4,472,218 ; U. P. States 1,206,070. Total (Pop.) 82,497,987 ; No. of Stations 126 ; No. of Cinemas 268.

Eastern Circuit—Comprising Bengal (Pop.) 50,114,002 ; Bengal States 973,336 ; Bihar and Orissa 37,677,576 ; Bihar-Orissa States, 4,652,007 ; Assam 8,622,251 ; Assam States 625,606. Total Pop. 102,664,778 ; No. of Stations 111 ; No. of Cinemas 201.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Southern Circuit—Comprising Madras Pop.) 46,740,107; Madras States 6,754,484; Mysore 6,557,302; Coorg 163,327; Hyderabad State 14,436,148. Total (Pop.) 74,651,368; No. of Stations 199; No. of Cinemas 372.

Grand total of Population of all Circuits above 338,141,169.

Total No. of Stations 637.

Total No. of Permanent Cinemas 1,265 (excluding Touring Cinemas).

Total No. of Touring Cinemas 500.

TAXATION.

It is claimed that the industry pays in taxes to Central and Provincial Governments and Local Bodies Rs. 1·21 crores yearly. The amount paid in Railway freights is about Rs. 11·25 yearly.

The collections from Entertainments tax in British India come to about Rs. 40 lakhs yearly. The approximate collections in the various Provinces is as follows: Bombay Rs. 9 lakhs; Bengal Rs. 7·6 lakhs, Madras Rs. 10·5 lakhs; U. P. Rs. 4·75 lakhs; Punjab Rs. 2·8 lakhs; Sind Rs. 1·8 lakhs; Bihar Rs. 1·64 lakhs; N.W. Frontier Province Rs. .55 lakhs; Assam Rs. .45 lakhs; Central Provinces Rs. .37 lakhs; in addition there is the revenue from the Provinces of Delhi and Coorg, which are administered by Chief Commissioner, bringing the total collection to Rs. 40 lakhs a year.

The direct annual taxation of the Production branch of the Indian film industry is estimated to be Rs. 11 lakhs, the direct annual taxation of the Exhibition branch of the industry is estimated at Rs. 53½ lakhs; while the indirect annual taxation of both these branches is estimated at about Rs. 40 lakhs.

The rate of Customs Duty is 25 per cent. of the invoice value on Raw Film. On Exposed Film the duty is 37½ per cent. on a valuation of 7 Annas per foot for long films and 3 Annas per foot for short films.

IMPORTS OF FILMS.

The following table giving in footage and value the totals of raw and exposed films imported into India and of the import duty paid to Government:—

Year	Footage	Value	Total Import Duty.
1922–23	73,10,429	13,23,393	2,55,935
1923–24	72,01,655	14,10,637	2,25,407
1924–25	94,44,760	15,02,823	2,60,709
1925–26	139,17,199	21,05,533	3,54,265
1926–27	174,82,664	23,21,508	4,22,854

	Raw Films		Exposed Films		
	Footage	Value	Footage	Value	
1927–28	12,372,093	5,89,355	10,372,288	20,28,975	4,42,330
1928–29	19,161,293	8,60,478	10,792,341	19,81,911	4,99,691

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society. In India, as in Paris, the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Mormugao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organised and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the Great War No. 1 several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed medical practitioner is allowed to transport, or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The amended Act also contains a section for the punishment of house-owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted; (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Iran and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent. yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. At present it is exported only to Burma, and a very small quantity to Zanzibar and Pemba and Aden and Dependencies. India is the only country that has made any considerable sacrifices of the kind.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian-races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (*e.g.*, the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India to these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligen : progress in the development of those regulations upon the use of opium which are time-honoured.

Present Policy.—The current attitude and policy of the Government of India were explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. It is, and always has been, the desire of Government to supress excessive indulgence.

Under the Government of India Act of 1919, opium was a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British India from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933, the total area of cultivation of Benares opium from 1932-33 being as under :

1932-33	=	27,228 Acres.
1933-34	=	13,792 ,,
1934-35	=	6,806 ,,
1935-36	=	7,167 ,,
1936-37	=	6,366 ,,
1937-38	=	6,564 ,,
1938-39	=	4,812 ,,
1939-40	=	4,899 ,,

The per capita consumption of Opium in British India during 1930 was 7·7 grains.

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

Glass was manufactured in India centuries before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (306 B.C.), when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in India, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. They devote themselves to the manufacture of bangles and lampware, while bottlemaking and production of table articles increase steadily.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry. The former, which is represented in several parts of the country, has its chief centres in the Firozabad area in the United Provinces. It is mainly concerned with the manufacture of cheap bangles made from glass blocks manufactured in large quantities. With the coming of the factory-scale manufacture of bangles, the Cottage Industry is struggling hard for existence. The Factory Industry is turning out much better quality bangles and has also successfully eliminated Japanese imports. Firozabad is in full control of the bangle market since the outbreak of the War, experiencing a period of great prosperity.

In other fields the Factory Industry is mainly concerned with the manufacture of lamp chimneys and globes, tumblers, jars, bottles, etc., the chief centres of production being the United Provinces, Calcutta and Bombay. A few factories specialise in quality glass blocks for the Cottage Industry. One factory in the United Provinces has been manufacturing sheet glass with modern equipment since 1929.

Records of the earlier ventures have shown that failure in some cases was due, in part at least, to preventible causes. Foremost among these, were lack of enlightened management, lack of expert attention and, in many cases, small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles and bangles. Paucity of sufficient fluid capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

In October, 1931, the inquiry into the glass industry was referred by the Government of India to the Indian Tariff Board. The Board submitted its report in March 1932. It recommended the grant of protection for ten years and outlined proposals for protective duties on the following basis:—(1) Sheet and Plate Glass including figured and ribbed glass—Rs. 4 per 100 sq. feet or 25 per cent., *ad valorem*, which ever is higher; bangles, beads and false pearls—50 per cent., *ad valorem*; glass and glassware of certain specified types, like tumblers, tiles, shades, chandeliers—50 per cent., *ad valorem*.

These findings however were not acceptable to the Government of India, who considered that the absence of indigenous supplies of raw materials constituted a disadvantage to the industry, which could not possibly be balanced by any advantages which it might possess in other respects. This, however, does not imply rejection of the recommendation because Government have decided to postpone their final decision in the matter. For the present Government have decided to afford the glass manufacturing industry a certain measure of relief by way of a rebate of duty on imported soda-ash.

In 1938 special action towards development of this industry was taken by the Government in the United Provinces. A Glass Technology Section was established in Benares under the direction of Dr. A. Nadel, Glass Technologist to Government U.P. Since then modern recuperative furnaces have been introduced, and numerous shaping and refining machines of a modern type installed in factories, according to development plans implemented by the Section. The production of laboratory ware was initiated and also the manufacture of false beads and glass pearls, according to a process until recently confined only to former Czechoslovakia. Apart from this the Glass Section tends to improve working condition in Firozabad and evolves new types of decorative glasses for the bangle and bead industry. Pure and applied research work is carried out at the Laboratory in Benares. As a result of the advisory activity of the Section three new factories are in the course of erection in the United Provinces. They will be equipped on modern scale and situated in Ghaziabad, Firozabad and Benares, producing table ware, bangles and bottles respectively.

HIDES, SKINS AND LEATHER.

Supply of raw hides and skins.—India is regarded as a surplus country in respect of her resources of raw hides and skins. It is estimated that normally she produces 20 million cattle hides, 3.5 million buffalo hides, 22 million goat and 3.5 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the bulk, about 75 to 80 per cent, is derived from animals that die a natural death. On account of this reason the output of these hides increases when famine, flood, cattle epidemics, etc., take an undue toll on livestock. Goat and sheep skins are, however, derived from animals slaughtered for meat and their production remains more or less at a steady level.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Trade in raw hides and skins.—Of the total output of India's raw hides and skins it is estimated that from 50 to 75 per cent of cattle hides and about 45 per cent of goat and sheep skins are now locally tanned and the balance exported in the raw condition. Previous to the European war of 1914-1918, about 56 per cent of the total export of cattle hides used to go to Germany and Austria and the balance to the other European countries and United States, while 80 per cent of the exported goat skins used to go to United States. The Germans brought the collections, curing and grading of the Indian cattle hides and the Americans those of goat skins to a fairly high standard. The war disorganised this export trade and during post-war years the Government of India levied an export duty of 20 per cent on hides with a rebate of 15 per cent for those which were exported to and tanned in Empire countries. The object of this measure was to foster in the first place India's leather industry and in the next encourage tanning of Indian hides within the British Empire and reduce their export to Germany and other non-Empire countries. Later on, the duty was abolished. The measure did not succeed in stopping export to Germany which continued to revive until the outbreak of the present war in 1939. The repeal of the duty helped the revival, and export to Germany rose to about 28 per cent of the total export in 1935-36. The post-war measures, however, increased tanning in India. There was a change in the direction of goat skins export also during the post-war period. After the war the United Kingdom developed the manufacture of glace kid and considerable quantities of Indian goat skins are being now exported to that country and the U. S. A.'s share is proportionately reduced. Still the U. S. A. takes about 3 times as much as the United Kingdom and about 70 per cent of the total export from India. India is responsible for the supply of about one-third of the total goat skins used in the world's tanning industry and some of her goat skins, especially those of Bengal and Bihar, are regarded to be the best raw materials for high class glace kid.

Cattle hides are cured for the export trade by air drying and dry salting. The better grades of the former are dried out, being stretched lengthwise on frames, and are called "Framed" hides, and the inferior ones are dried by spreading on the ground and are known as "Crumpled" hides. Air dried hides are treated with a solution of arsenic to ward off insect damage before export. Dry salt curing is done mostly in Bengal with a saline earth known as "Khari Salt" which consists principally of sodium sulphate mixed with varying proportions of sodium chloride and earthy matter. Goat skins are mostly dry salted and to a lesser extent air dried. The total export of raw hides and skins amounted to Rs. 3,84,06,560 in 1938-39.

Recently the Agricultural Marketing Adviser to the Government of India has been attempting to grade slaughtered cattle hides. Hide-grading stations have been started at slaughter houses at Delhi, Agra, Bandra (Bombay), Bareillie, Karachi and Rampur, and specifications for grades have been formulated. Hides and skins are included in the Schedule to the Agricultural Produce (Marketing and Grading) Act of 1937. An attempt is being made by the Board to improve flaying in the slaughter houses where grading stations have been started by giving a bonus to flayers.

Tanning in India.—The tanning industry in India has made great strides since the last European war. It may be divided into two categories, indigenous and modern.

Indigenous tanning.—This is carried out principally by the people of the tanning caste which is a depressed Hindu community known as the Chamar. They tan according to indigenous methods and their products may be divided into a number of typical groups, *viz.*, (*i*) the miscellaneous crude leather produced in the villages to meet local needs, (*ii*) the bag tanned buffalo sole leather produced in the Punjab and Calcutta which is extensively used for making shoes, (*iii*) tanned sheep skins of the Punjab known as "Kabuli Bheris" used as a cheap book binding leather throughout India, (*iv*) half-tanned leather of Madras and Bombay. The first three varieties are all consumed in India while the better grades of the fourth are exported chiefly to the United Kingdom and from there to other countries. The half-tanned cattle hides and calf skins are known in the International trade as East India tanned Kips and Calf skins. These are retanned and finished in the importing countries for making shoe upper and other varieties of dressing leather. The cattle hides used to be tanned formerly with avaram or turwar bark (Cassia auriculata) which occurs in South and Western India. But since the last war they are being tanned in Madras with wattle bark, large quantities of which are imported from South Africa. The goat and sheep skins in Madras and these as well as cattle hides in Bombay are still tanned with avaram bark. The present annual export of half-tanned leather is valued at about six crores of rupees.

Modern tanning.—Leather for Harness and Saddlery for military equipment has long been manufactured at Cawnpore by Western processes of vegetable tanning from buffalo and heavy cow hides using the local tanstuffs, babul bark (Acacia arabica) and myrobalans (Terminalia Chebula). Since the last war sole leather has also been manufactured in Cawnpore, Agra, Calcutta and Madras from buffalo hides according to modern process for use in ammunition boots and better types of civilian footwear. Its output is now quite considerable in the country and is increasing.

Chrome tanning.—The outstanding feature in the field of modern tanning in India since the last war is the phenomenal development of chrome tanning, especially for the manufacture of the shoe upper leather, Box and Willow sides from cattle hides and Box and Willow calf from calf skins. A number of tanneries in Cawnpore, Calcutta and Madras are engaged in the production of these leathers. Some of the tanneries are quite big and equipped with the latest chrome tanning machinery while there are large numbers in Calcutta which are small. Indian Box and Willow sides have been regularly exported to Burma, the Straits Settlements, Iraq, Persia and Africa since the last war. But after the Ottawa Trade Pact of 1933 Indian Box and Willow sides and Calf have been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

exported in increasing quantities to the United Kingdom, being helped by a preferential tariff in favour of India. The export of these leathers to the United Kingdom rose to Rs. 54,15,500 worth in 1937. The Ottawa Trade Pact has also helped the development of the manufacture of glace kid in India and its export from the country. The export of glace kid rose to the value of 9.3 lakhs of rupees in 1938.

Other items of modern tanning which have made some progress in India are belting leather, chamois leather, improved type of case leather, picking bands, roller skins, chrome lace leather, etc.

Training centres for leather industry.—There are a few training centres among which the Bengal Tanning Institute in Calcutta and Jullundar Tanning Institute, Jullundar City, maintained respectively by the Government of Bengal and Punjab may be mentioned. Particulars of the courses of training may be obtained from the institutes. There are also peripatetic tanning demonstration parties under the Industries Departments of the Governments of the Punjab, U. P., Bihar, Orissa and Bengal which hold instructional classes in rural areas to introduce improved processes of tanning.

COIR.

Coir is the trade name given to the fibre obtained from the husk of the coconut fruit. India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that there coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried out the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks, and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding the husk against a revolving spiked drum which combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as "mattress fibre." The longer fibres are retained in the hand of the operator and are classed as "bristle fibre" which is exported and used in the manufacture of brushes, etc. About 75 per cent. of the Ceylon produce is exported as raw fibre, and only 25 per cent. as yarn or manufactured coir.

The Indian industry, as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organised cottage industry. The freshly harvested nuts are purchased by merchants who convey them down the backwaters to suitable places for retting. Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected in places where the ground contains a considerable admixture of sand. Here, pits are dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. When filled they are covered with plaited coconut leaves and weighed down with soil or mud. The husks are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action. At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting spikes resembling thin saw blades made of iron. The fibre is sorted out into colour grades and distributed among the local people who spin this into yarn. The fibre is first made into "slivers" and is then either spun by hand or on a wheel. This is again returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. It is then tied into bundles and is disposed of to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

The yarn is very carefully graded, both for manufacture and for export, according to its colour, which is, in reality, a gauge of proper retting. The best quality of coir is a golden-yellow colour and the lowest grade is a grey colour which shows that the husks have either been over-retted or that the condition for retting have not been satisfactory.

Properly retted coir is of the highest quality. It is much more easily spun than machine made coir, because the fibres are clean and free from adhering pith and a much more even yarn is obtained. It is much stronger than machine-made coir because none of the long or "bristle" fibres have been removed in the process of extraction. The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and it therefore has special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The value of the Indian trade is considerable: the imports into Great Britain alone, which represent less than 20 per cent. of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India, and it provides the raw material in the shape of yarn and fibre for a considerable industry in Europe. More than 80 per cent. of the manufactured coir products imported into the United Kingdom are produced in India and more than 90 per cent. of the coir yarn. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent. of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent. of the of the total Indian exports of coir and coir products.

The Government of Madras are conducting a coir demonstration school at Beypore near Calicut under the control of the Director of Industries and Commerce, where students are trained in improved methods of cleaning fibre, of spinning of coir yarn on the wheel, of producing ropes, belts, mats, rugs, etc.

PATENTS, DESIGNS AND TRADE MARKS.

'*Patents*,' '*Designs*' and '*Trade Marks*' constitute certain forms of personal rights which are collectively referred to as rights of 'industrial property.' In India the rights in Patents and Designs are regulated by the Indian Patents and Designs Act, 1911, as amended from time to time, and the procedure under the Act is regulated by the Indian Patents and Designs Rules, 1933 and the Indian Secret Patent Rules, 1933. The Act and the Rules are contained in the *Patent Office Handbook*, which is available from the Manager of Publications, Civil Lines, Delhi. The Handbook contains in addition detailed instructions for those interested in Patents and Designs. The broad features of the Patents and Designs Act may be described as follows:—

PATENTS

A patent is a legal document which confers upon the patentee the exclusive privilege of making, selling and using an invention and of authorising others so to do. Patents granted under the Indian Patents and Designs Act are operative throughout British India. The normal term of a patent in British India is 16 years. But in exceptional cases, this term can be extended by a maximum of ten years. The continuance of the right conferred by a patent after the first four years of its term is subject to the payment of an annual renewal fee.

What may be patented.—A patent may be granted for an '*invention*,' which is defined as "any manner of new manufacture including an improvement or an alleged invention." In other words, to be patentable an invention must be a *manufacture*; it must be new; it must be useful and it must not be such as may be said to be obvious to a person skilled in the art to which the invention relates and acquainted with the common knowledge in that art at the time of applying for the patent. The word 'manufacture' includes any process, apparatus, device, machine, article, or composition of matter.

Illustrations of patentable inventions are *new* textile machines, power plants, agricultural implements, domestic appliances, drying and moistening apparatus and processes and sanitary appliances.

In the field of chemical industry *new* processes and apparatuses for manufacturing synthetic products, foodstuffs, dyes, tallow substitutes, starchy raw materials, soda ash, caustic soda, bleaching powder, toilet preparations, and processes for the treatment of oil seeds, by-products and waste materials, are all patentable inventions.

A plan of campaign in warfare or business, or the discovery of a hitherto unknown natural law is not patentable. Similarly, a game of chance or skill which does not require new means for playing it, or a method of calculation or a new notation for writing music, a new method of curing diseases, natural substances suitable for food, cannot be classed as 'manufactures,' and are therefore not patentable.

What are commonly called "patent medicines" are medicines prepared by secret formulæ, and are not usually covered by the grant of patents. The proprietors of such medicines may in most cases possess trade mark rights in the names by which the medicines are known.

New methods of using well-known apparatus may also be patented, provided the *new* methods result in unforeseen technical advantages. *New* compositions of matter may also be patented if their properties would not be deducible from known properties of their constituent substances.

In the case of chemical inventions, it should be noted that the article or substance which is produced may be old, but if the mode of producing it is new, the process will be patentable.

Who may obtain a patent and how.—Any person in possession of an invention may obtain a patent. Application for a patent should be made to the Controller of Patents and Designs and filed at the Patent Office at 1, Council House Street, Calcutta. The applicant himself may not be the inventor, but the name of the inventor has to be disclosed. The application has to be accompanied by a fee of Rs. 10 and by a specification containing a full description of the invention and its mode of operation. All applications for patents and the specifications accompanying them are examined by the Patent Office and are advertised in the Gazette of India, Part II, so as to enable interested parties to oppose the grant of the patent.

Other features.—Inventors of instruments or munitions of war may assign their inventions to the Central Government and obtain 'secret' patents therefor. Improvements in existing patents may be protected by 'patents of addition,' for which no renewal fee need be paid, but which would ordinarily remain in force only so long as the main patent is in force.

After a patent is obtained, the patentee may either sell the patent outright or may grant licences for its exploitation. He may work the patent himself.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

If, during the continuance of a patent, any person makes, sells, or uses the invention without obtaining a license from the patentee, or counterfeits it or imitates it, the patentee may institute a suit for infringement against the said person. The defendant in an infringement suit may counterclaim revocation of the patent. A patent worked wholly outside British India may also be revoked by the Central Government.

DESIGNS.

For the purpose of the Indian Patents and Designs Act, 1911, a 'design' means the features of shape, configuration, pattern or ornament applied to any article by any industrial process, which in the finished article appear to and are judged solely by the eye. A model or principle of construction, or anything which is in substance a mere mechanical device, or a trade mark is not a design for the purpose of the Indian Patents and Designs Act. Literary or artistic creations such as books, pictures, and music, which fall under the Indian Copyright Act (Act III of 1914) do not also come within the scope of the Indian Patents and Designs Act.

A design to be registrable must be *new or original* and must be applicable to an *article*. The original registration remains inforce for five years, but the period can be extended upto fifteen years in all.

During the existence of copyright in a registered design, the unauthorised application of the design to the article in question for purpose of sale is prohibited. The penalty for each infringement is a sum not exceeding five hundred rupees recoverable as a contract debt; the proprietor may, in the alternative, elect to bring a suit for the recovery of damages and for an injunction against the repetition of the infringement, in which case the infringer is liable to pay such damages as may be awarded. By a recent amendment of section 18 of the Indian Sea Customs Act, the inportation into British India of goods bearing a pirated design can be stopped.

GENERAL.

On the whole, Indian Law and practice for the protection of Inventions and the registration of designs closely follow the law and practice of the United Kingdom. The existing Indian Patents and Designs Act extends to the whole of British India including British Baluchistan and the Santhal Parganas. Although Burma is no longer a part of British India, the Indian Patents and Designs Act, 1911 was, by a special Act of the Burma legislature, made operative in Burma up to the 31st of March 1940. It is anticipated that this arrangement will be continued up to such time as the Burma Legislature enacts a separate Patents and Designs legislation for Burma. A draft Bill for this purpose was published in Part III of the Burma Gazette dated the 3rd February 1940.

The Indian States also do not come within the scope of the Indian Patents and Designs Act; but Baroda, Cochin, Hyderabad (Deccan), Jodhpur, Jammu and Kashmir, Mysore and Travancore have patent laws of their own, and particulars of the same may be obtained from the Patent offices of the respective States.

A patent granted in British India does not extend to the United Kingdom or to any other British possession. But, under a reciprocal arrangement, an applicant for an Indian patent may, under certain conditions, claim a 12 months priority in Australia, Baroda, Canada, Ceylon, Eire, Mysore, New Zealand, the Union of South Africa, and the United Kingdom for the corresponding patents that may be granted to him in those countries.

With the separation of Aden from India and its constitution into a Crown Colony on the 1st of April 1937, the Indian Patents and Designs Act so far as it was applicable to Aden was repealed by the Government of Aden; but by an ordinance issued in that Colony, it is provided that all British Indian Patents and registered designs bearing dates prior to the 1st April 1937 and in force at that date, shall continue to be in force in Aden also so long as they remain in force in British India.

TRADE MARKS.

Trade Marks are to some extent protected in British India by section 3 of the Merchandise Marks Act (IV of 1889), which enacts sections 478-489 of Chapter XVIII of the Indian Penal Code and by the law of Commercial goodwill.

An Act, namely the Trade Marks Act 1940, for the registration and more effective protection of trade marks, was however passed by the Indian Legislature in March, 1940. The main provisions of this Act will not come into force until such time as a notification appointing a date in that behalf, is issued by the Central Government and the rules necessary for working the Act are framed.

One important section of the Act, however, namely Section 85, has come into force. This section authorises the Central Government to prescribe the necessary procedure for the *deposit* of trade marks at the *Patent Office*, in advance of the coming into force of the remaining provisions of the Act.

The procedure for the deposit of trade marks under this section was prescribed by the Central Government and it was provided that deposit of trade marks may be made between the 1st of October 1940, and the 31st of March 1941. But by a recent notification the period for the receipt of the deposits of trade marks has been extended upto the 30th of June 1941.

The deposits of trade marks may be made at the *Patent Office*, at Calcutta, or at the *Branch* of the Trade Marks Registry, at Central Building, Queen's Road, Bombay.

The following is a brief summary of the more important of the remaining provisions of the Trade Marks Act 1940.

In accordance with this Act a "mark" includes a device, brand, heading, label, ticket, name, signature, word, letter or numeral or any combination thereof; and a "trade mark" is a mark used or proposed to be used in relation to goods for the purpose of indicating a connection in the course of trade between the goods and some person having the right to use the mark.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Register of Trade Marks will be kept at the Patent Office under the control and management of the **Controller of Patents and Designs,** who has been appointed as the **Registrar of Trade Marks.** A branch of the Trade Marks Registry has been opened at Bombay for facilitating the registration of trade marks in respect of textile goods. Applications for the registration of textile marks may, however, be made at Bombay or at Calcutta at the option of the applicant.

Trade marks contrary to law or morality, or disentitled to protection in a court of law by virtue of their being likely to lead to deception or confusion, shall not be registrable.

Applications for registration of trade marks shall be liable to be opposed and the decision of the Registrar will be appealable to a High Court having jurisdiction.

Original registration of a trade mark will be in force for seven years, but this period may be extended by fifteen years at a time.

The registered proprietor will have the exclusive right to use the trade mark on the goods for which it is registered.

The certificate of registration shall be *prima facie* evidence of the validity of the registered proprietor's title during the first seven years. Thereafter, the registration shall be regarded as valid in all respects, unless it was obtained by fraud or unless the trade mark offends against section 8 (law or morality, etc.).

Any person, not being a trader in the goods in question, who undertakes to certify the quality, standard, purity or some other characteristic of any goods, may register a trade mark as a *certification trade mark.* The grant of such registration shall be subject to the approval of the Central Government and the applicant will be required to deposit certain regulations for regulating the use of the certification trade mark.

The Act also contains provisions for defensive registration of trade marks, and for registering "permitted use" of the trade marks by other persons than the proprietors of such marks.

The false description of a trade mark as 'registered,' when in fact it has not been registered under the Act shall be punishable with fine or imprisonment or with both.

Use of Royal Arms without authority may be restrained by injunction.

Another provision of great interest to owners of trade marks is contained in section 20 of the Act. This section provides that 'no person shall be entitled to institute any proceedings to prevent, or to recover damages for, the infringement of an unregistered trade mark unless such trade mark has been in use by him, since before the 25th of February, 1937, and unless an application for its registration, *made within five years* from the commencement of the Act, has been refused. It would accordingly be advantageous for owners of old marks to apply for the registration of their trade marks as soon as possible after the entire Act comes into force, as even if registration is refused, such refusal would confer substantial privileges on the applicants.

WAR LEGISLATION

Rules 84A to 84C of the Defence of India Rules enable the Central Government to grant licenses under *enemy-owned patents and designs.* For further information on this subject reference may be made to the Patent Office, 1, Council House Street, Calcutta.

Rule 42 of the Defence of India Rules provides that except under the authority of the Controller, no person shall make an application for the grant of a patent or the registration of a design in any country or place not included in His Majesty's Dominions, and not being an Indian State.

The rights in *enemy-owned trade marks* belonging to a business which now vests in the Custodian of Enemy Property for British India, have also been vested in the said Custodian. Other enemy-owned trade marks do not vest in the Custodian, but their deceptive use is liable to be treated as an offence under the Indian Penal Code.

There has been considerable expansion of insurance business in India during the last decade. This is shown by the fact that the total business remaining in force with Indian life offices which, at the end of the year 1929 was Rs. 82,00,00,000 had, by the end of 1938, grown to Rs. 219,00,00,000, or an average increase of Rs. 13·7 crores yearly. The total new sums assured by the offices in 1938 amounted to nearly Rs. 46,68,00,000, the largest of any of the previous ten years. Again the total income of Indian life companies was Rs. 4,92,00,000 in 1929 and Rs. 14,13,00,000 in 1938, a figure which exceeded the previous year's income by Rs. 2,11,00,000.

DISTRIBUTION OF COMPANIES.

The total number of companies in 1938 which were subject to the provision of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 360, of which 217 companies are constituted in India and 143 outside India.

Of the 217 Indian companies, 67 have their head offices in the Bombay Presidency, 50 in Bengal, 39 in the Madras Presidency, 25 in the Punjab, 12 in Delhi, 10 in United Provinces, 5 in Central Provinces, 4 in Bihar, 2 in Ajmer-Merwara, 1 each in Assam, Sind and North-West Frontier Province.

Of the 143 non-Indian companies, 72 are constituted in the United Kingdom, 28 in the British Dominions and Colonies, 15 in the Continent of Europe, 16 in the United States of America, 7 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 182 in number, and of the remaining 35 Indian companies, 18 carry on life business along with other insurance business and 17 carry on business other than life. Of the 200 Indian companies doing life business, 166 are Proprietory and 34 are Mutual. The oldest existing Mutual Company was established in 1847, and the oldest existing Proprietory Company was established in 1874.

As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 143 non-Indian companies, 117 carry on insurance business other than life, 12 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 26 companies, 17 were constituted in the United Kingdom, 7 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

During 1938 one Indian company was established in the Punjab with the object of transacting life assurance business.

DIVIDING INSURANCE BUSINESS.

Some Indian companies transact life assurance business on the Dividing Plan, under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The defects of Dividing Insurance Business are many. Most of the companies which transacted Dividing Insurance Business realised that they could not continue this business for a long time. This class of Dividing Business as well as the other on the Call System has been prohibited under the New Insurance Act, 1938. It is accordingly highly essential that those companies which still transact this class of business should stop it forthwith and consult actuaries with a view to converting their existing business into ordinary life assurance business on sound principles.

PROVIDENT INSURANCE SOCIETIES.

In addition to the insurance companies which were subject to the provisions of the Acts of 1912 and 1928, there were at the commencement of the Insurance Act, 1938, 505 societies registered under the Provident Insurance Societies Act, 1912 mostly transacting dividing insurance business. The remarks about 'Dividing Insurance Business' are applicable to these societies also.

Very few of the above provident societies are survivors of those old provident societies which prior to the passing of the Provident Societies Act, 1912, numbered about 1,200. When that Act was passed, the majority of those old societies ceased to exist.

Of the 505 societies existing at the commencement of the Insurance Act, 1938, 295 are established in Bengal, 34 in the Bombay Presidency, 57 in the Madras Presidency, 47 in the Punjab and 27 in Sind and the remaining societies are scattered over the other provinces of India.

LIFE ASSURANCE BUSINESS.

The total new life assurance business (excluding business on the Dividing Plan) effected in India during the year 1938 amounted to 322,000 policies assuring a sum of Rs. 51·7 crores and yielding a premium income of Rs. 271 lakhs, of which the new business done by Indian companies amounted to 296,000 policies assuring a sum of Rs. 43·3 crores and having a premium income of Rs. 228 lakhs.

The share of the British companies in respect of new sums assured was Rs. 4·1 crores, of the Dominion and Colonial companies Rs. 3·4 crores, of the single German company Rs. 7 crores and of the single Swiss company Rs. 2 crores.

The average sum assured under the new policies issued by Indian companies is Rs. 1,460 and under those issued by non-Indian companies Rs. 3,244.

The total life assurance business effected in India and remaining in force at the end of 1938 amounted to 1,516,000 policies assuring a total sum of Rs. 298 crores (including reversionary bonus additions) and having a premium income of Rs. 15·6 crores. Of this the share of Indian companies is represented by 1,240,000 policies assuring a sum of Rs. 204 crores and having a premium income of nearly Rs. 10·5 crores.

ANNUITY BUSINESS.

Annuity business continues to be slight in India. This class of business for various reasons is not as popular as in the West. The total new annuity business effected during the year 1938 was for the amount of Rs. 2,25,000 per annum, of which the share of Indian companies was Rs. 16,000 per annum. The total annuity business remaining in force at the end of that year was for the amount of Rs. 12,96,000 per annum, of which the amount payable by Indian companies was Rs. 1,88,000 per annum.

Some Indian Life Offices have been operating outside India, mostly in Burma, British East Africa, Ceylon, Federated Malay States and Straits Settlements. The total new sums assured by these Offices outside India in 1938 amounted to Rs. 3·4 crores yielding a premium income of Rs. 19·5 lakhs and the total sums assured including reversionary bonus additions remaining in force at the end of 1938 amounted to Rs. 15·1 crores having a premium income of Rs. 82 lakhs.

The total new sums assured by Indian Life Offices in 1938 amounted to nearly Rs. 47 crores, the total sum assured in force at the end of the year to Rs. 219 crores and the total revenue income to Rs. 14 crores.

INDIAN LIFE OFFICES' BUSINESS.

The following table shows the New Business effected by Indian Life Offices during each year since 1926 the Total Business remaining in force at the end of the year, the Total Life Assurance Income of Indian Companies and the Life Assurance Funds.

Year.	New business of Indian Life Offices written during the year.	Total business of Indian Life Offices remaining in force at the end of the year.	Total Life Assurance Income of Indian Companies.	Life Assurance Funds of Indian Companies.

INCOME & OUTGO.

The total income of Indian Life Offices during 1938 amounted to Rs. 14·13 crores. The income consisted of Rs. 11·50 lakhs under Premiums, Rs. 2·40 lakhs under Interest, and Rs. 23 lakhs under other receipts. On the Outgo side, Claims by Death amounted to Rs. 1,94 lakhs, by Survivance to Rs. 2,09 lakhs; while Surrenders amounted to Rs. 42 lakhs; Annuities and Pensions amounted to Rs. 1·4 lakhs; while expenses of Management totalled Rs. 3,64 lakhs; Dividends to Shareholders Rs. 10 lakhs; Depreciation transfer to Investment Fluctuation Account etc. Rs. 30 lakhs; miscellaneous Rs. 5 lakhs, and increase in Life Fund to Rs. 5,44 lakhs.

The source from which each Rs. 100 of the Income of Indian Companies was derived in 1938 and the two preceding years and the manner in which it was disposed of are shown in the following figures.

Income.	1938	1937	1936
Premiums for Life Assurance & Annuities ..	81·4	81·7	74·4
Interest, Dividends and Rents (Less Income-Tax).	17	16·5	15·2
Other Receipts	1·6	1·8	10·4
Total ..	100	100	100

Outgo.	1938	1937	1936
Claims by Death	13·7	13·2	13·6
Claims by Survivance ..	14·8	13·3	12·8
Surrenders including bonuses	3	3·3	2·9
Annuities and Pensions ..	·1	·1	·1
Expenses of Management .	25·8	26·3	24·1
Dividends to Shareholders..	·7	·8	·7
Depreciation, Transfer to Investment Fluctuation Account, etc.	2·1	1·3	1·5
Miscellaneous	1·2	1·3	1·4
Increase in Life Funds ..	38·6	40·4	42·9
Total ..	100	100	100

LIFE FUNDS AND INTEREST YIELD.

The life assurance funds increased by Rs. 5·47 crores during 1938 and amounted to Rs. 50·56 crores at the end of that year. The average rate of interest earned on the life funds during the year after deduction of income-tax at the source, was 5·15 per cent.

The net rates of interest realized by the Indian Life Offices in each of the past five years are as follows:—

Year.	1934	1935	1936	1937	1938
Rate of interest ..	5·08	4·93	4·69	4·76	5·15

POST OFFICE INSURANCE FUND.

Besides the Indian Life Offices, there are some pension funds, mostly connected with Government services, which are exempt from the operation of the Indian Life Assurance Companies Act of 1912. The Indian Post Office Insurance Fund is also exempt from the operation of that Act. The Post Office Insurance Fund was instituted by the Government of India in 1883 for the benefit of the postal employees, but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund for the year ending 31st March, 1939 :—Total Number of Policies 97,751; Total Sums Assured and Bonuses Rs. 20,89,98,000 ; Total Income Rs. 1,09,39,000 ; Life Assurance Fund Rs. 8,54,67,000.

The last valuation of the Post Office Fund was made as at 31st March 1937. It disclosed a surplus of Rs. 1,13 lakhs of which Rs. 63½ lakhs was allocated to the policyholders for payment of reversionary bonus at the rate of 1½ per cent per annum in the case of whole life as well as endowment assurances.

NON-LIFE BUSINESS.

The net Indian Premium Income of all companies under insurance business other than life assurance during 1938 was Rs. 2,82 lakhs, of which the Indian companies' share was Rs. 89 lakhs, and that of the non-Indian companies Rs. 1,93 lakhs.

The total amount is composed of Rs. 1,38 lakhs from Fire, Rs. 52 lakhs from Marine, and Rs. 92 lakhs from Miscellaneous Insurance business.

The Indian companies received Rs. 43 lakhs from Fire, Rs. 12 lakhs from Marine, and Rs. 34 lakhs from Miscellaneous Insurance Business. The non-Indian companies received Rs. 95 lakhs from Fire, Rs. 40 lakhs from Marine, and Rs. 58 lakhs from Miscellaneous Insurance business.

From the net figures given above it is not possible to form a correct estimate of the total business effected in India as a considerable portion of Indian business of both Indian and non-Indian companies is re-insured outside India.

The Indian companies which transact a substantial amount of fire or marine insurance business also operate outside India. These companies had a net premium income of Rs. 78 lakhs in 1938 from business outside India.

ASSETS OF INDIAN COMPANIES.

The following is a summary of the Assets of Indian Companies :—

	Rs.
